Excerpt from ESAR VHP Interim Technical and Policy Guidelines, Standards and Definitions: System Development Tools (Interim June 2007) pages 7-8

I. ESAR-VHP Electronic System Requirements

1. Each State is required to develop an electronic registration system for recording and managing volunteer information based on the data definitions presented in the *ESAR-VHP Guidelines*. These systems must :

   a) Offer WWW-based registration
   b) Ensure that volunteer information is collected, assembled, maintained and utilized in a manner consistent with all Federal, State and local laws governing security and confidentiality.
   c) Identify volunteers via queries of critical variables.
   d) Generate electronic data files in a secure format that can be read and used by other authorities managing volunteers.
   e) Track volunteers during deployment and maintain a history of volunteer deployments.
   f) Ensure that the system is redundant.

2. Each electronic system must be able to register and collect the credentials and qualifications of health professionals that are then verified with the issuing entity or appropriate authority identified in the *ESAR-VHP Guidelines.*

   a) Each State must collect and verify the credentials and qualifications of the following health professionals.

      Covered by RN

      1) Physicians
      2) Registered Nurses, including Advanced Practice Registered Nurses (APRNs). APRNs include Nurse Practitioners, Certified Nurse Anesthetists, Certified Nurse Midwives, and Clinical Nurse Specialists.

      Covered

      3) Pharmacists
      4) Psychologists
      5) Clinical Social Workers
      6) Mental Health Counselors
      7) Radiologic Technologists — Not yet licensed, but a bill pending, so wait
      8) Respiratory Therapists
      9) Clinical Laboratory Technologists and Technicians
      10) Licensed Practical Nurses

      National certification DHS will give us the vote to add

   b) Six (6) months after end of the FY 2007 budget period, each State must expand its electronic registration system to include the remaining priority professions identified in the *ESAR-VHP Guidelines*.

c) States must add additional professions to their systems as they are added to future versions of the *ESAR-VHP Guidelines.*

3. The ESAR-VHP system must be able to assign volunteers to all four ESAR-VHP credential levels. Assignment will be based on the credentials and qualifications that the State has collected and verified with the issuing entity or appropriate authority.

4. Each electronic system must be able to record ALL volunteer health professional/emergency preparedness affiliations of an individual, including local, State, and Federal entities.

The purpose of this requirement is to avoid the potential confusion that may arise from
having a volunteer appear in multiple registration systems (e.g., Medical Reserve Corps
(MRC), National Disaster Medical System (NDMS), State emergency response, and etc.).

5. Each electronic system must be able to identify volunteers willing to participate in a Federally coordinated emergency response.

   a) Each electronic system must query volunteers upon initial registration and/or re-verification of credentials about their willingness to participate in emergency responses coordinated by the Federal government. Responses to this question, posed in advance of an emergency, will provide the Federal government with a rough count of the potential volunteer pool that may be available from the States upon request.

   b) If a volunteer responds "Yes" to the Federal question, additional information (e.g., training, physical and medical status, and criminal background history) may be required of the volunteer.

6. Each State must be able to update volunteer information and re-verify credentials every 6 months.

Subject: certification info for laboratory techs

Attachments: ProceduresforExaminationCertification.pdf

ProceduresforExaminationCertif...

Hello All,
I found that the certification organizations for lab techs are merging into one organization referred to as the American Society for Clinical Pathology, ASCP.

http://www.ascp.org/default.aspx

The ASCP Board of Registry certifies 20 professions.

I have asked the vendor who is developing our new registry (WEAVR) to contact the organization about interfacing our systems for the purpose of verifying certification credentials.

I checked the organization on line and it certainly seems that the individual seeking certification needs to prove education at a Level 1, 2, 3 or 4, which is based on education and supervised experience. See example for Medical Technologist that follows

MT(ASCP) Medical Technologist
To be eligible for this examination category, an applicant must satisfy the requirements of at least one of the following routes:

Route 1: A baccalaureate degree from a regionally accredited college/university including courses in biological science, chemistry and mathematics AND successful completion of a NAACLS accredited Medical Technologist program within the last 5 years, OR

Route 2: MLT(ASCP) certification AND a baccalaureate degree from a regionally accredited college/university, including 16 semester hours (24 quarter hours) of biological science (with one semester in microbiology), 16 semester hours (24 quarter hours) of chemistry (with one semester in organic or biochemistry), one semester (one quarter) of mathematics, AND two years of full time acceptable clinical laboratory experience in Blood Banking, Chemistry, Hematology, Microbiology, Immunology and Clinical Microscopy in the U.S., Canada or a CAP/The Joint Commission /AABB accredited laboratory within the last ten years. At least one year must be under the supervision of a pathologist (certified by the American Board of Pathology) or an appropriately board certified medical scientist and a certified medical technologist, OR

Route 3: *CLA(ASCP) certification, AND a baccalaureate degree from a regionally accredited college/university, including 16 semester hours (24 quarter hours) of biological science (with one semester in microbiology), 16 semester hours (24 quarter hours) of chemistry (with one semester in organic or biochemistry), one semester (one quarter) of mathematics, AND four years of full time acceptable clinical laboratory experience in Blood Banking, Chemistry, Hematology, Microbiology, Immunology and Clinical Microscopy in the U.S., Canada or a CAP/The Joint Commission /AABB accredited laboratory within the last ten years. At least two years must be under the supervision of a pathologist (certified by the American Board of Pathology) or an appropriately board certified medical scientist and a certified medical technologist, OR

Route 4: A baccalaureate degree from a regionally accredited college/university, including 16 semester hours (24 quarter hours) of biological science (with one semester in microbiology), 16 semester hours (24 quarter hours) of chemistry (with one semester in

organic or biochemistry), one semester (one quarter) of mathematics, AND five years of full time acceptable clinical laboratory experience in Blood Banking, Chemistry, Hematology, Microbiology, Immunology and Clinical Microscopy in the U.S., Canada or a CAP/The Joint Commission/AABB accredited laboratory within the last ten years. At least two years must be under the supervision of a pathologist (certified by the American Board of Pathology) or an appropriately board certified medical scientist and a certified medical technologist.

I hope this is of some value to you as you consider language for laboratory technologists and technicians.

Attached is the full document for examination certification.

Please let me know if there is anything else you need for the Tuesday noon deadline.

~~PRELIMINARY DRAFT - NOT READY FOR INTRODUCTION~~

RMR

SENATE AMENDMENT ,

TO 2009 SENATE BILL 226

DN

At the locations indicated, amend the bill as follows:

1. Page 74, line 15: after that line insert:

"**SECTION 259g.** 257.01 (1g) of the statutes is created to read:

257.01 **(1g)** "Clinical laboratory technician" means an individual who holds a valid, unexpired certification as a clinical laboratory technician or technologist from an organization from which the department recognizes certification for purposes of this chapter.".

2. Page 76, line 13: after "provider," insert "clinical laboratory technician,".

Senator Jauch:

Under current law and the bill, health care practitioners who were accredited by Wisconsin within the previous 10 years may be emergency volunteer health care practitioners. Individuals accredited by other states must have current accreditation to be an emergency volunteer health care practitioner under the bill. This amendment requires that all clinical laboratory technicians have a current certification in order to qualify as an emergency volunteer health care practitioner.
