RE: Senate Caucus Budget Motion Request #2
Municipal Flood Control & Riparian Restoration Program

Earmark \$2.5 million annually in the Stewardship Program, general land acquisition category, for municipal flood control and riparian restoration efforts. These funds would be used primarily for the purchase of perpetual flowage and conservation easement rights on land within the floodway. So, in addition to public ownership of natural areas and open space, municipalities downstream would get flood relief.

See attached language for general gist of what we are trying to accomplish.

Alternatively, add \$10 million bonding to the flood prevention category of the omnibus nonpoint source pollution prevention motion adopted by Finance.

CN 1402

JUST THIS

7. **Municipal Flood Control and Riparian Restoration Program.** Create a municipal flood control and riparian restoration program within the urban nonpoint program to provide financial assistance to cities, villages, towns or metropolitan sewerage districts for facilities and structures, including the purchase of perpetual flowage and conservation easement rights on land within the flood way and flood proofing of public or private structures remaining in the 100 year flood plain, for the collection and transmission of storm water and ground water. Allocate ~~\$5~~ million in ~~general obligation bonding~~ authority to fund up to 70% of eligible costs for construction and real estate acquisition for a DNR approved project. Require that \$1 million SEG annually from the nonpoint account of the environmental fund that is currently being used for nonpoint source grants and local assistance annually be used by DNR for municipal flood control and riparian restoration program local assistance grants for up to 70% of eligible costs, including planning and design costs.

Allow DNR to provide grants (a) for projects affecting two or more municipalities or metropolitan sewerage districts, to one of the applicant municipalities or metropolitan sewerage districts upon application by two or more municipalities or metropolitan sewerage districts affected by the project; (b) to a municipality or metropolitan sewerage district with jurisdiction for the provision of storm water collection facilities to two or more municipalities or metropolitan sewerage districts affected by the project; or (c) for projects affecting only one municipality or metropolitan sewerage district to the applicant municipality or metropolitan sewerage district.

Require that DNR specify criteria for determining the eligibility and priority ranking of projects which include requiring: (a) no transfer of flooding down stream; (b) to the extent practical, no harm of existing beneficial functions of waterbodies and wetlands; (c) the maintenance of aquatic and riparian environments; (d) to the extent practical, the use of storm water retention and detention structures and the use of natural storage; (e) adequate opportunity for public use access for the stream and flood way; and (f) no channelization, acceleration of upstream runoff or concrete lining of natural stream beds.
