Subject: Message for Robin Ryan

Hello Robin

Tim Capenter would like an amendment to SB 142 drafted that would require CPR training to include education regarding the new CPR protocol called CCR or cardio cerebral resuscitation in situations of sudden cardiac arrest. This protocol is currently used by Rock and Walworth county, and has just been implemented in the city of Madison.

The bill may be given an executive session soon, so if you could call me at your earliest convenience to discuss the ways this could be done with this bill, it would be greatly appreciated.

If you are not the person to handle this, could you please pass the message on?

Thank you very much,

G. Stuart Ewy
Office of Sen. Tim Carpenter

Subject: CCR

Hi Robin-

Here is some information about what we talked about earlier today re CCR.

Officials here tout new cardiac technique

Samara Kalk Derby
January 15, 2008

The Madison Fire Department is implementing new cardiac protocols that could potentially triple the survival rate of someone having cardiac arrest.

The new protocol for cardiac arrest emphasizes chest compressions over mouth-to-mouth resuscitation, and today, Mayor Dave Cieslewicz was set to become one of the first local "lay responders" to be trained in the relatively new form of CPR, called CCR, for cardiocerebral resuscitation.

CPR isn't always successful because sometimes lay responders are reluctant to put their mouths to another person's mouth. CCR doesn't involve mouth-to-mouth contact, and it's so easy that doctors say anyone can do it if they see someone collapse.

"The question that I have for you is, 'If you saw somebody that you didn't know, would you want to do that kind of a procedure?' " said Assistant Fire Chief Jim Keiken about mouth-to-mouth resuscitation.

"In the past, if you didn't do that, there was a belief that you didn't do anything, where now with this information you do the compressions, the compressions are moving the blood, they are moving the oxygen, and you are doing what needs to be done especially in those first few minutes," he said.

CCR uses continuous chest compressions at a rate of 100 per minute. The idea is to keep the heart beating by pressing repeatedly on the chest and moving the stored oxygen in the blood to vital parts of the body, particularly the brain.

"Under the old compression ventilation process there was only approximately 60 percent of the time where you are circulating blood," Keiken said. "That makes a difference."

He said the resuscitation rates in most communities around the country, where somebody walks out of the hospital after a cardiac arrest, are only about 10 percent. In places such as Rock and Walworth counties, where they have been doing CCR for a few years, success rates have been between 35 and 45 percent, "which is dramatic," he said.

Cardiac arrest is different from a heart attack. In cardiac arrests, the heart suddenly stops beating. In heart attacks, a blood vessel blockage impairs blood flow to the heart.

Through the efforts of Dr. Darren Bean, medical director of the Madison Fire Department and a University Hospital physician, the Fire Department has gotten approval from the state to allow its paramedics and emergency medical technicians to revise their practices for cardiac resuscitation. The department is also launching a countywide program designed to improve survival rates from out-of-hospital cardiac arrest -- rates that have not changed locally or nationally in 20 years.

With changes under way for health care providers in the field, there is a desperate need to train lay responders.

"The importance of bystander initiated chest compressions cannot be overstated," said Bean. "The single most important predictor of survival from cardiac arrest is whether or not the person received bystander chest compressions. What you do in the first minute after collapse is often the difference between life and death."

Fire Department spokeswoman Lori Wirth said the protocols have gone through the state fairly rapidly.

"The medical community is rather excited about it because it really is the first time in probably 20 years we've seen real movement in the numbers. And not just being able to revive somebody at the scene, but actually being able to send them home with no neurological damage," she said.

New Citywide Cardiac Protocol Calls For New CPR-Like Technique

Chest Compressions Save More Lives Than Standard CPR In Rock, Walworth Counties

By *Angela Bettis*,
Staff Writer

UPDATED: 8:45 am CST January 16, 2008

MADISON, Wis. -- Madison emergency personnel have a new protocol when it comes to cardiac response and care.

On Tuesday, the Madison Fire Department unveiled its new protocols, which call for cardiocerebral resuscitation, or CCR, instead of CPR in most cases, WISC-TV reported.

The process involves no mouth-to-mouth rescue breathing, as in traditional CPR. Instead, it uses continuous chest compressions at a rate of 100 per minute.

"If chest compressions are started in the first minute, their survival probabilities are excellent," said Dr. Darren Beam, Madison Fire Department medical director.

Beam is also a MedFlight and emergency room physician at University of Wisconsin Hospital. He said fewer than 30 percent of heart attack victims in Dane County receive CPR to bridge them until emergency crews arrive.

"Cardiac arrest survival rates have not changed locally or nationally in 20 years," said Beam.

Emergency personnel in Rock and Walworth counties have been using CCR as a primary means of cardiac treatment since 2004.

"It bridges not only the heart muscle, but the brain," said Beam.

"Nerve tissue is really intolerant of low blood-flow states," said Beam. "In three to four minutes, you're suffering irreversible neurologic injury. Effective immediate chest compressions can bridge that for many, many minutes."

That bridge of time would allow emergency personnel to arrive on scene, proponents said.

Rock and Walworth County authorities report a survivability rate of 40 percent over the traditional CPR method, WISC-TV reported.

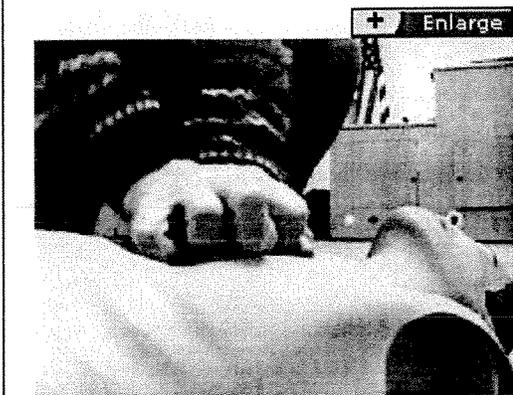

"We're talking about surviving to be discharged from the hospital," said Beam. "Walking out of the hospital, going to play with your kids, going back to work, paying taxes, basically resuming your life."

But he said the key is training the public.

They are advocating the public take a five-minute training course in case someone near you has a heart attack.

"First, call 911," said Beam. "Then start immediate ongoing chest compressions. If that happens in the

Related To Story

first minute, their chances of survival are excellent. If it doesn't happen, their chances of survival are dismal."

Madison Mayor Dave Cieslewicz was one of the first lay-people to be trained in CCR on Tuesday. The training came at his request after witnessing a heart attack firsthand during the annual Crazy Legs race in April 2007, WISC-TV reported.

"I witnessed a man have a heart attack right in front of me, literally right in front of me," said Cieslewicz. "I watched those personnel save his life twice. I saw them bring him back. He was not breathing when they started."

Cieslewicz said he had never formally been trained in CPR.

"It occurred to me that after watching that, that if he and I had been running together, just the two of us, he wouldn't have survived, because I wouldn't have known what to do," said Cieslewicz.

"If you want to learn to do the nuts and bolts and be able to respond in a vast majority of cases, give me four minutes of your time and we'll teach you how to do it," said Beam.

The Fire Department is teaming up with the American Red Cross to offer CCR training to businesses across the city. Employees at Monona Terrace will be among the first trained in CCR next month, WISC-TV reported.

"Anybody can do it and with a little bit of training it can save a lot of lives," said Cieslewicz.

Beam said the five-minute CCR training doesn't offer certification and isn't intended to be a replacement for the standard first-aid and CPR class offered by the Red Cross.

But he said it could save a life.

In a statement released on Tuesday, the Badger Chapter of the American Red Cross said, "The Red Cross recognizes that giving chest compressions exclusively is an acceptable alternative for those persons who are unwilling, unable, untrained or no longer able to perform full CPR. As more people become aware of this alternative, more will step forward to help in an emergency and the safer our community will be."

Officials said that businesses interested in CCR training can call the Madison Fire Department's community education department at 266-4709.
