Chapter NR 256

METAL MOLDING AND CASTING

NR 256.01 Purpose. The purpose of this chapter is to establish effluent limitations, standards of performance, and pretreatment standards for discharges of process wastes from the metal molding and casting category of point sources and its subcategories.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.02 Applicability. This chapter applies to aluminum, copper, ferrous or zinc casting operations which discharge or may discharge pollutants to waters of the state or into a publicly owned treatment works.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.03 General definitions. The following definitions are applicable to terms used in this chapter. Definitions of other terms and the meanings of other abbreviations are set forth in ss. NR 205.03, 205.04 and 211.03.

(1) "Aluminum casting" means the remelting of aluminum or an aluminum alloy to form an intermediate or final cast product by pouring or forcing the molten metal into a mold.

(2) "Copper casting" means the remelting of copper or a copper alloy, to form an intermediate or final cast product by pouring or forcing the molten metal into a mold.

(3) "Existing source" means any point source, except a new source as defined in sub. (5), from which pollutants may be discharged either into waters of the state or into a POTW.

(4) "Ferrous casting" means the remelting of ferrous metals to form an intermediate or final cast product by pouring or forcing the molten metal into a mold.

(5) "New source", as defined for new source performance standards and pretreatment standards for new sources, means any point source from which pollutants are or may be discharged directly into the waters of the state or into a POTW, the construction of which commenced after November 15, 1982.

(6) "Noncontinuous discharger" means a plant which does not discharge pollutants during periods of at least 24 hours in duration for reasons other than an upset, such as plants which routinely store wastewater for treatment on a batch basis.

(7) "Total phenols" means total phenolic compounds as measured by the test procedure for phenols, which is distillation followed by manual or automated colorimetric (4AAP), as indicated in ch. NR 219, Table B, for parameter 48.

(8) "Zinc casting" means the remelting of zinc or a zinc alloy to form an intermediate or final cast product by pouring or forcing the molten metal into a mold.

(9) Abbreviations to be used:

(a) "SCF" means standard cubic feet.

(b) "Sm^3" means standard cubic meters.

(c) "TTO" and "total toxic organics" mean the sum of the mass of each of the toxic organic compounds specified in the tables within this chapter which are found at a concentration greater than 0.010 mg/l.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.04 Monitoring and reporting requirements.

(1) TOTAL TOXIC ORGANICS. An indirect discharger may elect to monitor for oil and grease as an alternate to TTO under PSES and PSNS regulatory values. Due to the high solubility of toxic organics in oil and grease, compliance with the oil and grease standard is considered equivalent to compliance with the TTO standard.

(2) NONCONTINUOUS DISCHARGERS. (a) For noncontinuous direct dischargers, the department shall apply effluent limitations or standards in the form of mass-based annual average, concentration-based maximum day and concentration-based maximum monthly average as indicated in the tables within this chapter.

(b) For noncontinuous indirect dischargers, the control authority may elect to establish concentration-based standards as outlined in sub. (3).

(3) CONVERSION TO CONCENTRATION-BASED UNITS. (a) The

control authority may apply concentration-based standards which are exactly equivalent to PSNS and PSES mass-based standards. Concentration-based standards shall be derived by the following procedure:

(b) Multiply PSNS or PSES mass-based standards by a) average production (kkg of metal poured), b) raw material usage (kkg of sand reclaimed), or c) air scrubber flow (Sm^3 of air scrubbed), whichever applies, and divide by average discharge flow to the POTW. In calculating, use appropriate measurements and conversion factors to ensure that concentration-based units in mg/l result.

(4) MONTHLY DISCHARGE LIMIT. Compliance with the monthly discharge limits, as calculated from monthly average regulatory values from tables contained in this chapter, is required regardless of the number of samples analyzed and averaged.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.05 Compliance dates. (1) Any existing source subject to this chapter which discharges to waters of the state shall achieve:

(a) The effluent limitations representing BPT by July 1, 1977; and

(b) The effluent limitations representing BAT by July 1, 1984.

(2) Any new source subject to this chapter which discharges to waters of the state shall achieve NSPS at the commencement of discharge.

(3) Any existing source subject to this chapter which introduces process wastewater pollutants into a POTW shall achieve PSES by October 31, 1988.

(4) Any new source subject to this chapter which introduces process wastewater pollutants into a POTW shall achieve PSNS at the commencement of discharge.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

Subchapter I — Aluminum Casting Subcategory

NR 256.10 Applicability; description of the aluminum casting subcategory. (1) This subchapter applies to discharges to waters of the state and to introductions of pollutants into publicly owned treatment works from aluminum casting operations. It applies to a production process if the molten metal contains, on average, greater than 50% by weight of aluminum or if aluminum comprises the greatest percentage of the metal, measured by weight.

(2) This subchapter does not apply to the casting of ingots, pigs or other cast shapes following primary metal smelting, which is regulated by the nonferrous metals manufacturing point source category under 40 CFR Part 421. This subchapter does not apply to the casting of aluminum performed as an integral part of aluminum forming and conducted on-site at an aluminum forming plant, which is regulated by the aluminum forming point source category under 40 CFR Part 467.

(3) Processing operations following the cooling of castings, except for grinding scrubber operations, may be regulated by the aluminum forming point source category under 40 CFR Part 467, electroplating point source category under ch. NR 260, or metal finishing point source category under ch. NR 261.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.12 Effluent limitations representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter, including noncontinuous direct dischargers, shall achieve the following BPT effluent limitations. Grinding scrubber operations may not discharge process wastewater pollutants to waters of the state.

TABLE 1
ALUMINUM CASTING SUBCATEGORY

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.13 Effluent limitations representing the degree of effluent reduction attainable by the application of the best available technology economically achievable. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter, including noncontinuous direct dischargers, shall achieve the copper, lead, zinc, and total phenols effluent limitations contained in s. NR 256.12. Grinding scrubber operations may not discharge process wastewater pollutants to waters of the state.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.14 New source performance standards. Any new source subject to this subchapter, including noncontinuous direct dischargers, shall achieve the effluent limitations contained in s. NR 256.12. Grinding scrubber operations may not discharge process wastewater pollutants to waters of the state.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.15 Pretreatment standards for existing sources. Except as provided in ss. NR 211.13 and 211.14, any existing source subject to this subchapter which introduces pollutants into a publicly owned treatment works shall comply with ch. NR 211 and achieve the following pretreatment standards for existing sources. Grinding scrubber operations may not discharge process wastewater pollutants to a POTW.

NR 256.16 Pretreatment standards for new sources. Except as provided in s. NR 211.13, any new source subject to this subchapter which introduces pollutants into publicly owned treatment works shall comply with ch. NR 211 and achieve the pretreatment standards contained in s. NR 256.15. Grinding scrubber operations may not discharge process wastewater pollutants to a POTW.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

Subchapter II — Copper Casting Subcategory

NR 256.20 Applicability; description of the copper casting subcategory. (1) This subchapter applies to discharges to waters of the state and to introductions of pollutants into publicly owned treatment works from copper casting operations. It applies to a production process if the molten metal contains, on average, greater than 50% by weight of copper or if copper comprises the greatest percentage of the metal, measured by weight.

(2) This subchapter does not apply to the casting of ingots, pigs or other cast shapes following primary metal smelting, which is regulated by the nonferrous metals manufacturing point source category under 40 CFR Part 421. This subchapter does not apply to the casting of copper alloys containing either beryllium at 0.1% or greater by weight or precious metal at 30% or greater by weight.

(3) Processing operations following the cooling of castings, except for grinding scrubber operations, may be regulated by the electroplating point source category under ch. NR 260 or metal finishing point source category under ch. NR 261.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.22 Effluent limitations representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter, including noncontinuous direct dischargers, shall achieve the following BPT effluent limitations. Grinding scrubber operations may not discharge process wastewater pollutants to waters of the state.

NR 256.23 Effluent limitations representing the degree of effluent reduction attainable by the application of the best available technology economically achievable. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter, including noncontinuous direct dischargers, shall achieve the following BAT effluent limitations. Grinding scrubber operations may not discharge process wastewater pollutants to waters of the state.

NR 256.26 Pretreatment standards for new sources. Except as provided in s. NR 211.13, any new source subject to this subchapter which introduces pollutants into publicly owned treatment works shall comply with ch. NR 211 and achieve the pretreatment standards contained in s. NR 256.25. Grinding scrubber operations may not discharge process wastewater pollutants to a POTW.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

Subchapter III — Ferrous Casting Subcategory

NR 256.30 Applicability; description of the ferrous casting subcategory. **(1)** This subchapter applies to discharges to waters of the state and to introduction of pollutants into publicly owned treatment works from ferrous casting operations. It applies to a production process if the molten metal contains, on average, greater than 50% by weight of ferrous metal or if ferrous metal comprises the greatest percentage of the metal, measured by weight.

(2) Ancillary scrubber operations, such as fan washes and backwashes, are covered by the mass limitations of the associated discrete wet scrubbing device. Water discharges from aftercooling devices are not regulated as a process wastewater in this subcategory.

(3) Processing operations following the cooling of castings, except for grinding scrubber operations, may be regulated by the electroplating point source category under ch. NR 260, or metal finishing point source category under ch. NR 261.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.31 Specialized definitions. The following definitions are applicable to terms used in this chapter:

(1) "Cast iron" means an iron containing carbon in excess of the solubility in the austentite that exists in the alloy at the eutectic temperature, or any iron-carbon alloy that contains 1.2% or more carbon by weight.

(2) "Discrete wet scrubbing device" means a distinct, standalone device that removes particulates and fumes from a contaminated gas stream by bringing the gas stream into contact with a scrubber liquor, usually water, and from which there is a wastewater discharge, including but not limited to spray towers and chambers, fixed and variable venturi scrubbers, wet caps, packed bed scrubbers, quenchers and orifice scrubbers. It does not include aftercoolers, ancillary scrubber operations such as fan washes and backwashes, or semi-wet scrubbing devices.

(3) "Ductile iron" means a cast iron treated while molten with a master alloy that contains an element such as magnesium or cerium to induce the formation of free graphite as nodules or spherules, which imparts a measurable degree of ductility to the cast metal.

(4) "Gray iron" means a cast iron that gives a gray fracture due to the presence of flake graphite.

(5) "Malleable iron" which means a cast iron made by a prolonged anneal of white cast iron in which either decarburization or graphitization, or both, eliminate some or all of the cementite, and where graphite is present in the form of temper carbon.

(6) "Multiple ferrous melting furnace scrubber configuration" means a configuration where 2 or more discrete wet scrubbing devices are used in series in a single melting furnace exhaust gas stream.

(7) "Primary metal cast" means the metal that is poured in the greatest quantity at an individual plant.

(8) "Semi-wet scrubbing device" means a device to which water is added and totally evaporates prior to dry air pollution control.

(9) "Steel" means and iron-base alloy containing manganese, carbon at less than 1.2% by weight, and often other alloying elements.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89

NR 256.32 Effluent limitations representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter, including noncontinuous direct dischargers, shall achieve the following BPT effluent limitations. Grinding scrubber operations may not discharge process wastewater pollutants to waters of the state.

TABLE 39
FERROUS CASTING SUBCATEGORY
CASTING CLEANING OPERATIONS

BPT Effluent Limitations					
			Noncontinuous Direct Dischargers		
	Maximum for any 1 day	Maximum for monthly average	Maximum for any 1 day	Maximum for monthly average	Annual average
Pollutant or pollutant property	kg/1,000 kkg (pounds per million pounds) of metal poured		mg/l[(1)]	mg/l[(1)]	[(2)]
Copper (T)	0.0129	0.0071	0.29	0.16	0.0029
Lead (T)	0.0353	0.0174	0.79	0.39	0.0098
Zinc (T)	0.0656	0.025	1.47	0.56	0.0179

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.33 Effluent limitations representing the degree of effluent reduction attainable by the application of the best available technology economically achievable. (1) Any plant, including noncontinuous direct dischargers, which casts primarily malleable iron where metal poured is equal to or less than 3,557 tons per year or casts primarily steel, shall achieve the copper, lead, zinc, and total phenols effluent limitations contained in s. NR 256.32. Grinding scrubber operations may not discharge process wastewater pollutants to waters of the state.

(2) Except as provided in 40 CFR 125.30 to 125.32, any plant, including noncontinuous direct dischargers, which casts primarily malleable iron where metal poured is greater than 3,557 tons per year or casts primarily ductile or gray iron shall achieve the following BAT effluent limitations. Grinding scrubber operations may not discharge process wastewater pollutants to waters of the state.

(1) In a multiple ferrous melting furnace scrubber configuration, each discrete wet scrubbing device with an associated wastewater discharge shall be given the mass allowance specified. The allowance will be identical for each device and based on the airflow of the exhaust gas stream that passes through the multiple scrubber configuration.
(2) These concentrations shall be multiplied by the ratio of (0.42/x) where x is the actual normalized process wastewater discharge flow (in gallons per 1,000 SCF of air scrubbed) for a specific plant.
(3) kg/62.3 million Sm^3 (pounds per billion SCF) of air scrubbed.
(4) Within the range of 7.0 to 10.0 at all times.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89

NR 256.36 Pretreatment standards for new sources. Except as provided in s. NR 211.13, any new source subject to this subchapter which introduces pollutants into publicly owned treatment works shall comply with ch. NR 211 and achieve the pretreatment standards contained in s. NR 256.35. Grinding scrubber operations may not discharge process wastewater pollutants to a POTW.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89,

Subchapter IV — Zinc Casting Subcategory

NR 256.40 Applicability; description of the zinc casting subcategory. (1) This subchapter applies to discharges to waters of the state and to introductions of pollutants into publicly owned treatment works from zinc casting operations. It applies to a production process if the molten metal contains, on average, greater than 50% by weight of zinc or if zinc comprises the greatest percentage of the metal, measured by weight.

(2) This subchapter does not apply to the casting of ingots, pigs or other cast shapes following primary metal smelting, which is regulated by the nonferrous metals manufacturing point source category under 40 CFR Part 421. This subchapter does not apply to the casting of zinc performed as an integral part of zinc forming and conducted on-site at a zinc forming plant, which is regulated by the nonferrous metals forming point source category under 40 CFR Part 471.

(3) Processing operations following the cooling of castings, except for grinding scrubber operations, may be regulated by nonferrous metals forming point source category under 40 CFR Part 471, electroplating point source category under ch. NR 260, or metal finishing point source category under ch. NR 261.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89,

NR 256.42 Effluent limitations representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available. Except as provided in 40 CFR 125.30 to 125.32, any existing point source subject to this subchapter, including noncontinuous direct dischargers, shall achieve the following BPT effluent limitations:

TABLE 71

MELTING FURNACE SCRUBBER OPERATIONS

BAT Effluent Limitations					
			Noncontinuous Direct Dischargers		
	Maximum for any 1 day	Maximum for monthly average	Maximum for any 1 day	Maximum for monthly average	Annual average
Pollutant or pollutant property	kg/62.3 million Sm^3 (pounds per billion SCF) of air scrubbed		mg/l[(1)]	mg/l[(1)]	[(2)]
Copper (T)	1.56	0.852	0.77	0.42	0.345
Lead (T)	1.07	0.527	0.53	0.26	0.304
Zinc (T)	1.54	0.588	0.76	0.29	0.365
Total phenols	1.74	0.608	0.86	0.3	0.406

[(1)] These concentrations shall be multiplied by the ratio of (0.243/x) where x is the actual normalized process wastewater discharge flow (in gallons per 1,000 SCF of air scrubbed) for a specific plant.

[(2)] kg/62.3 million Sm^3 (pounds per billion SCF) of air scrubbed.

TABLE 78
ZINC CASTING SUBCATEGORY
MOLD COOLING OPERATIONS

BAT Effluent Limitations					
			Noncontinuous Direct Dischargers		
	Maximum for any 1 day	Maximum for monthly average	Maximum for any 1 day	Maximum for monthly average	Annual average
Pollutant or pollutant property	kg/1,000 kkg (pounds per million pounds) of metal poured		mg/l[(1)]	mg/l[(1)]	[(2)]
Copper (T)	0.304	0.166	0.77	0.42	0.067
Lead (T)	0.209	0.103	0.53	0.26	0.0591
Zinc (T)	0.3	0.114	0.76	0.29	0.071

[(1)] These concentrations shall be multiplied by the ratio of (47.3/x) where x is the actual normalized process wastewater discharge flow (in gallons per 1,000 pounds of metal poured) for a specific plant.

[(2)] kg/1,000 kkg (pounds per million pounds) of metal poured.

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.44 New source performance standards. Any new source subject to this subchapter, including noncontinuous direct dischargers, shall achieve the following standards:

TABLE 79

[1] These concentrations shall be multiplied by the ratio of (47.3/x) where x is the actual normalized process wastewater discharge flow (in gallons per 1,000 pounds of metal poured) for a specific plant.

[2] kg/1,000 kkg (pounds per million pounds) of metal poured

[3] Within the range of 7.0 to 10.0 at all times

History: Cr. Register, June, 1989, No. 402, eff. 7-1-89.

NR 256.45 Pretreatment standards for existing sources. Except as provided in ss. NR 211.13 and 211.14 any existing source subject to this subchapter which introduces pollutants into a publicly owned treatment works shall comply with ch. NR 211 and achieve the following pretreatment for existing sources:

TABLE 83
ZINC CASTING SUBCATEGORY
CASTING QUENCH OPERATIONS

PSES		
	Maximum for any 1 day	Maximum for monthly average
Pollutant or pollutant property	kg/1,000 kkg (pounds per million pounds) of metal poured	
Copper (T)	0.0344	0.0187
Lead (T)	0.0237	0.0116
Zinc (T)	0.0339	0.0129
TTO[1]	0.093	0.0304
Oil and grease[2]	1.34	0.446

[2] TTO is comprised of the following toxic organic pollutants:
2,4,6-trichlorophenol
para-chloro meta-cresol
2,4-dichlorophenol
2,4-dimethylphenol
fluoranthene
methylene chloride (dichloromethane)
phenol
bis(2-ethylhexyl) phthalate
di-n-butyl phthalate
diethyl phthalate
tetrachloroethylene

[2] Use as alternative to monitoring for TTO.

TABLE 84
