Steam heating supply and return pipes located in vented crawl spaces and attic spaces	R-4
Hydronic heating supply and return pipes located in vented crawl spaces and attic spaces	R-2
Domestic water heater pipes:	
Circulating, along entire accessible length in vented crawl spaces	R-2
Noncirculating hot and cold supply water pipes in vented crawl spaces	R-2

(2) WINDOWS AND DOORS. (a) *General.* Except as specified in sub. (3), windows and doors shall comply with this subsection.

(b) *Windows.* 1. Except as provided in subd. 2., windows shall be double-glazed or shall be provided with exterior or interior storm windows. The glazed or glass areas of storm windows shall be caulked or sealed to minimize air leakage.

2. a. Storefront windows are not required to be double-glazed.

b. When an exterior storm window is installed over an operable window required for natural ventilation, a portion of the storm window shall be operable from the inside.

c. Windows located in boiler or furnace rooms do not need to be double-glazed or equipped with storm windows.

d. Windows located in basement areas that are not habitable rooms may be permanently sealed and insulated in lieu of double-glazing or installing exterior or interior storm windows.

(c) *Doors.* Patio doors shall be insulated, double-glazed or equipped with storm doors. Where no vestibule exists, inward swinging exterior doors shall be insulated, double-glazed or equipped with storm doors. Door lites need not be double-glazed if they are within the door leaf. All storm doors shall be equipped with self-closing devices. All accessible joints and cracks in storm doors shall be caulked or otherwise sealed.

(3) BLOWER DOOR TEST. (a) Except as specified in par. (b), storm windows and doors are not required when blower door testing shows that the natural air change rate of the thermal envelope is 1.0 air change per hour or less.

Note: Blower door testing may be conducted in accordance with ASTM E779, "Standard Practice for Measuring Air Leakage by the Fan Pressurization Method."

(b) Testing done on any date prior to certification shall be acceptable, provided no change has occurred to the building that would impact the test results in a negative or indeterminate way.

(4) MOISTURE CONTROL. (a) *Ceilings.* Ventilation shall be provided above any ceiling or attic insulation. The free area of ventilation shall be at least 1/300 of the horizontal area. Where overhangs with soffits are provided, one-half of the free-area shall be at the eaves and one-half in the upper one-third of the roof or gable. Where it is impractical to install gravity venting, power

vent systems may be used to provide equivalent ventilation. Power vents shall be connected to a humidistat.

(b) *Crawl spaces.* Ventilation shall be provided in the crawl space. The area of ventilation shall be at least 1/300 of the floor space. The area of ventilation shall be distributed equally to at least 2 openings in the foundation wall. The openings shall be located to provide cross ventilation. Where accessible, a vapor barrier shall be applied to cover the exposed earth.

(5) **EQUIPMENT.** (a) *Combustion air.* Combustion air openings shall be unobstructed.

(b) *Flow restricters.* All showers heads shall be equipped with flow restricters rated at three gallons per minute or less.

SPS 367.12 Performance energy efficiency requirements. (1) **GENERAL.** The performance energy efficiency requirements specified in subs. (2) to (4) may be applied as alternative requirements to s. SPS 367.11.

(2) **SPACE HEATING ENERGY USE.** Buildings shall have an annual space heating energy use, in BTUs per square foot, per heating degree-day, which is no greater than the value shown in Table 367.12. The annual heating energy use shall be determined in accordance with sub. (3) or (4).

(3) **CALCULATION FROM FUEL USE DATA.** The annual space heating energy use may be calculated from one year of representative fuel use data using department form, SBD-10647 or an equivalent method approved by the department prior to its use. The building area used in the calculation shall be the total gross floor area. The gross floor area is measured from the exterior faces of exterior walls or from the centerline of walls separating buildings, excluding covered walkways, open roofed-over areas, porches and similar spaces, pipe trenches, exterior terraces or steps, chimneys, roof overhangs, and similar features. The determination of annual space heating energy use per square foot shall be performed by or verified by an inspector.

(4) **MEASUREMENT OF BUILDING PERFORMANCE.** The annual space heating energy use may be determined in accordance with field measurement methods approved by the department prior to use. At a minimum, the method must be nationally recognized, meet a national standard, or be demonstrated to have equivalent accuracy.

Note: The department approves use of the Wisconsin Energy Bureau Home Energy Rating System for buildings of four dwelling units or less provided a blower door test is used to estimate the building infiltration. Information demonstrating the accuracy of other field measurement methods may be submitted to the department for review.
