Assumptions Used in Arriving at Fiscal Estimate (Continued)

In the above estimate, it is assumed that verification of parking lot illumination requirements and inaccessibility of security camera recording devices would be made by a building inspector of the local unit of government for new and remodeling projects. No significant additional cost is anticipated for this activity since it would be part of the overall inspection of the dwelling through normal building permit inspection procedures.

However, initial and subsequent verifications of existing structures for compliance with these requirements represents a new task beyond normal building permit processes. It is estimated that it will cost approximately \$216,000 for this task statewide, using the following assumptions: 14,400 at-risk establishments at 45 minutes per inspection (including travel time) for a total of approximately 10,800 hours at \$20.00 per hour for salary and fringes.

Additionally, an ordinance enacted under this bill may require any of the following: (1) that the owner of every at-risk business equip the convenience store, service station or restaurant with a drop safe that is inaccessible to employees and post a conspicuous sign at the entrance stating that the safe on the premises is inaccessible to employees; and (2) that the owner of every convenience store, service station or restaurant require all employees who work at any time between 8 pm and 5 am to attend a workplace security training program that has been approved by the attorney general.

It is assumed the drop safe requirement, if enacted, would be verified by the building inspector of the local unit of government for new and remodeling projects. No significant additional cost is anticipated for this activity since it would be part of the overall inspection of the dwelling. Verification of the drop safe requirement for existing structures would be a separate inspection task but could be included in the inspection procedures for parking lot illumination requirements estimated above, so no significant additional costs are anticipated for this activity.

The cost of financing a workplace security training program for all employees of at-risk businesses who work between 8 pm and 5 am will vary between counties, cities, villages and towns statewide. An annual overall cost to develop, maintain and conduct a workplace security training program is estimated as follows: It is assumed 1.0 FTE (\$45,000 annual cost and \$7,300 onetime cost) will be needed to coordinate the program and conduct the workplace security training. Additionally, the cost of training all employees working in at-risk businesses is estimated to be approximately \$1,200,000 statewide, assuming 238,441 employees at a cost of \$5.00 per person for training.
