Assumptions Used in Arriving at Fiscal Estimate:

Under current law, a school district may not increase its per pupil revenue from property taxes and state school aid by more than a certain amount. For most school districts, the maximum allowable increase in per pupil revenue for the 2000-01 school year was about \$220. Current law also requires that state school aid (defined as state aid plus the school levies credit) shall constitute two-thirds of school revenues (defined as state school aids plus school property tax levies).

The bill repeals the school district revenue limit. The bill also repeals the two-thirds state funding requirement, but makes no changes in the various school aid distribution formulas.

The repeal of the school district revenue limit could lead to higher school district spending than under current law. The repeal of the two-thirds state funding requirement could lead to a change in the percentage of school revenues funded through state aids. Due to the demands on the state for other services, it is possible that this percentage could be lower than under current law.

A combination of higher spending and lower percentages of state aid would lead to higher property taxes than under current law. Available data do not allow a reasonable estimate of the increase in the property tax levy this bill could engender.
