Subject					
Revenue limit adjustment for security measures					

Assumptions Used in Arriving at Fiscal Estimate

This bill increases a school district's revenue limit in any school year by the amount spent by the school district in that school year for security measures designed to prevent criminal activity in schools, but not more than an amount equal to \$100 multiplied by the number of pupils enrolled. If this bill had been in effect in 2000-01, and each school district in the state had incurred costs for security measures, it is estimated that school districts' revenue limit statewide could have increased by a maximum of approximately \$87 million (870,000 pupils X \$100).

State Fiscal Effect:

The bill would increase the amount needed for the state to meet its commitment to fund two-thirds of partial school revenues by a maximum of \$58 million GPR (\$87 million X 2/3). Because the amount that school districts will spend on security measures is unknown, the exact increase in state aid necessary to meet the state's two-thirds funding commitment is indeterminate.

The bill would result in additional calculations for school district revenue limits and, thus, increased workload for staff on the school financial services team. It is assumed that these increases could be absorbed within the agency's operating budget.

Local Fiscal Effect:

Local school districts could realize an increase in revenues as a result of this bill. Because the department does not collect data on the amount that local school districts annually spend on security measures designed to prevent criminal activity, the local fiscal effect of this bill is indeterminate. If all school districts in the state were to raise their revenue limit by \$100 per pupil for security purposes as provided under this bill, local school property taxes could have increased by a maximum of \$29 million in FY01 (\$87 million X 1/3), on a statewide basis.

Long-Range Fiscal Implications
