

DRAFTER'S NOTE
FROM THE
LEGISLATIVE REFERENCE BUREAU

LRB-3797/5dn
RCT:kmg:pg

March 8, 2004

Ann Molitor:

I did not get hold of Steve Schultz, so this redraft should be reviewed carefully. It is based on my assumption that there will be 4 quarterly samples at the new sampling point. If the well is only being used during one quarter, the samples for the other quarters will not contain water from the problematic well, but will consist of water from the other water sources that goes up into the discharge line when the well is not being used. If my understanding is incorrect and there would be only one sample in this circumstance or if I am mistaken in some other respect, please let me know.
