Education tax credit					

Assumptions Used in Arriving at Fiscal Estimate

The bill would create a nonrefundable income and franchise tax credit for certain businesses that pay tuition expenses at qualified postsecondary institutions for individuals enrolled in degree-granting programs. The credit would be for 50% of tuition expenses, but would increase to 75% of tuition expenses if the individual's taxable income was not more than 185% of federal poverty line. Unused credit amounts could be carried forward for use in offsetting income tax in future years.

To claim credit for tuition expenses of a family member of the claimant or a managing employee, the family member must have been employed an average of at least 20 hours a week for the claimant or the claimant's business during the previous year and be enrolled in a degree-granting program substantially related to the claimant's business.

Corporations, insurers and sole proprietors could claim the credit; partnerships, limited liability companies, and tax option companies would compute the credit and pass it on to partners, members and shareholders in proportion to their ownership interests.

Qualified postsecondary institutions are the University of Wisconsin System institutions, technical college system institutions, any regionally accredited four-year nonprofit college or university having regional headquarters and principal place of business in Wisconsin, or a school approved by the veterans educational approval board if the school has a physical presence and delivery of education in the state. Degree granting programs are defined to include any program for which an associate, bachelor's or graduate degree is awarded. No credit could be allowed unless the claimant obtained written certification from the school on the amount of qualified tuition the claimant paid or incurred in the taxable year.

A credit could not be claimed for any tuition amounts excluded from income under the Wisconsin tuition expense deduction or the federal employer educational assistance exclusion.

The bill would also require the department to annually submit a report to the legislature identifying each postsecondary institution that has received tuition payments and the amount of the tuition for each institution claimed as a credit.

Based on information from the University of Wisconsin System, the Wisconsin Technical College System and the U.S. Office of Management and Budget, it is estimated that employers currently provide \$45 million in qualified tuition expenses for employees annually. Of this amount, an estimated \$25 million would be subject to the 50% credit and \$20 million would be subject to the 75% credit. This would result in credit claims of approximately \$27.5 million annually (\$20 million x 75%) + (\$25 million x 50%). Based on Department data, approximately 75% of credits claimed in a tax year are actually used. Therefore, it is estimated that the fiscal effect would be to reduce income tax revenues by \$20.6 million annually (\$27.5 million x 75%).

The Department estimates that one-time computer programming development costs would be \$48,000 and ongoing support and data capture costs would be \$51,100. The bill does not provide funding for these costs.

Long-Range Fiscal Implications
