

Fiscal Estimate Narratives

DNR 3/7/2016

LRB Number	15-0327/1	Introduction Number	SB-781	Estimate Type	Original
Description Disinfection of drinking water supplied by a municipal water system					

Assumptions Used in Arriving at Fiscal Estimate

This bill would require a municipal water system to provide continuous disinfection of water served. Current law prohibits DNR from requiring a municipal water system to provide continuous disinfection unless federal law requires it or water quality data, well construction, or water system construction indicate a potential health hazard.

Fiscal Impact:

The Department estimates an annual increase in local government costs by approximately \$103,900 and a one-time increase in local government costs by \$508,800.

Annual Local Government Costs

a. There are currently 56 municipal systems in Wisconsin serving water that is not disinfected. This statutory change would require these systems to begin disinfecting 36 months after publication. The Department estimates that chemicals for disinfection at these systems will cost an average of \$145/month. Therefore, 56 systems x \$145/month x 12 months = \$97,400.

b. The Department estimates that this bill will require 56 systems to conduct disinfection by-product monitoring. Disinfection by-product monitoring requires systems to collect 1 sample once every 3 years at a cost of \$350/sample. Therefore, 56 systems x \$350/sample ÷ 3 (once every 3 years) = \$6,500.

One-time Local Government Costs

a. There are currently 56 systems in Wisconsin serving water that is not disinfected, although all systems are required to have the necessary equipment to disinfect. The Department estimates that approximately 44 wells will need new disinfection equipment to implement disinfection on a permanent basis. Installing new disinfection equipment will cost approximately \$8,000/well. Therefore, 44 municipal wells x \$8,000/well = \$352,000.

b. There are currently 56 systems in Wisconsin serving water that is not disinfected. If these systems are required to begin disinfecting they will also be required to conduct preliminary monitoring for disinfection by products. This will require two samples per quarter at a cost of \$350/sample. Therefore, 56 systems x 2 samples/quarter x 4 quarters x \$350 = \$156,800.

Costs do not include any additional treatment beyond disinfection or potential safety equipment, such as an eye washing station. Systems that select disinfection using chlorine may incur additional costs related to the presence of iron and manganese in the water. Treatment for iron and manganese is not required by rule.

Long-Range Fiscal Implications
