ASSEMBLY BILL 1015

renewable portfolio standards applicable to certain electric utilities and cooperatives.

Analysis by the Legislative Reference Bureau

This bill eliminates requirements under current law for electric utilities and retail electric cooperatives (electric providers) to ensure that, in a given year, a specified percentage of the electricity that the electric provider sells to retail customers or members is derived from renewable resources.

The requirements are commonly and collectively referred to as renewable portfolio standards (RPSs). "Renewable resource" is defined to include a resource deriving electricity from any of the following: certain fuel cells; tidal or wave action; solar thermal electric or photovoltaic energy; wind power; geothermal technology; biomass; certain synthetic gases; certain densified fuel pellets; fuels produced by pyrolysis of organic or waste material; and certain hydroelectric facilities. In addition, current law allows the Public Service Commission (PSC) to promulgate rules designating other resources as renewable resources. Under that authority, the PSC has promulgated rules designating biogas a renewable resource. Current law also provides for the creation of credits based on the electricity that an electric provider derives from renewable resources. An electric provider may use the credits it creates to comply with an RPS for a particular year or sell the credits to another electric provider who may use the purchased credits to comply with an RPS. The bill eliminates all of the foregoing requirements and provisions.

The bill also eliminates a goal under current law that, by December 31, 2015, 10 percent of all electricity consumed in the state is derived from renewable resources. In addition, the bill eliminates a requirement under current law for the PSC to make annual reports regarding the goal.

The people of the state of Wisconsin, represented in senate and assembly, do enact as follows:

gas energy system” means equipment which directly converts biomass, as defined
under section 45K (c) (3) of the Internal Revenue Code, as interpreted by the Internal
Revenue Service, into biogas or synthetic gas, equipment which generates electricity,
heat, or compressed natural gas exclusively from biogas or synthetic gas, equipment
which is used exclusively for the direct transfer or storage of biomass, biogas, or
synthetic gas, and any structure used exclusively to shelter or operate such
equipment, or the portion of any structure used in part to shelter or operate such
equipment that is allocable to such use, if all such equipment, and any such
structure, is located at the same site, and includes manure, substrate, and other
feedstock collection and delivery systems, pumping and processing equipment,
gasifiers and digester tanks, biogas and synthetic gas cleaning and compression
equipment, fiber separation and drying equipment, and heat recovery equipment,

conventional energy system. In this subsection, “synthetic gas” is a gas that qualifies
as a renewable resource under s. 196.378 (1) (h) 1. h. 79.005 (3r) (a) 8. In this
subsection, “solar energy system” means equipment which directly converts and
then transfers or stores solar energy into usable forms of thermal or electrical energy,
but does not include equipment or components that would be present as part of a
conventional energy system or a system that operates without mechanical means.
In this subsection, “wind energy system” means equipment which converts and then
transfers or stores energy from the wind into usable forms of energy, but does not
include equipment or components that would be present as part of a conventional
energy system. Until the tax incremental district terminates, the exemption under
this subsection for biogas or synthetic gas energy systems does not apply to property
in existence on January 1, 2014, and located in a tax incremental financing district
