AN ACT relating to: modifying and repealing various rules promulgated by the Department of Transportation.

Analysis by the Legislative Reference Bureau

This bill makes minor and technical changes to rules promulgated by the Department of Transportation (DOT), including correcting obsolete references and references to defunct programs and updating or repealing provisions that are inconsistent with current statutes and federal rules or that were promulgated based on statutes that have since been amended or repealed. The bill also make several substantive changes to various rules promulgated by DOT, including the following:

1. DOT’s current rules include provisions implementing the Wisconsin Environmental Policy Act. These rules include provisions that, among other things, establish criteria and procedures relating to environmental assessments, environmental impact statements, environmental reports, and categorical exclusions relating to DOT actions that may affect the quality of the human environment. Many of these rules reference provisions of the National Environmental Policy Act. This bill makes various changes to rules relating to the environmental review process and environmental documentation for transportation projects, including: 1) removing examples of specific actions for which an environmental assessment or environmental report is or is not required; 2) standardizing and clarifying content requirements for certain environmental documentation; 3) modifying certain provisions relating to notice and hearing on proposed actions; 4) adding provisions relating to revision of final action documents, including environmental reports and records of decision; 5) modernizing references
to federal law; and 6) eliminating or adding notes and making other minor and technical changes.

2. The bill changes the methodology by which the department evaluates major highway projects.

3. The bill allows certain recreational vehicle dealers that do not have a permanent facility in the state to display and sell recreational vehicles at certain temporary rally or show sites.

4. The bill authorizes an alternate design for handicapped parking signs displayed in parking lots.

5. The bill eliminates a continuity-of-service requirement for motor vehicle rental companies.

6. The bill authorizes the use of electronic signatures on applications for special identification cards that afford certain parking privileges for persons with a disability that limits or impairs the ability to walk.

For further information see the state fiscal estimate, which will be printed as an appendix to this bill.

MAJOR HIGHWAY PROJECT NUMERICAL EVALUATION PROCESS

SECTION 113. Trans 210.01 of the administrative code is amended to read:
Trans 210.01 Purpose. In accordance with s. 85.05, Stats., this chapter sets forth the process and criteria used by the department to numerically evaluate projects considered for enumeration. This process for evaluating candidate major highway projects is used to advise the transportation projects commission. This chapter establishes a minimum score that a project shall meet or exceed in order to be eligible for recommendation to the transportation projects commission.

Section 114. Trans 210.02 of the administrative code is amended to read:

Trans 210.02 Applicability. The procedures in this chapter shall be applied to projects being considered for enumeration as major highway projects by the department.

Trans 210.05 Minimum benefit requirement. Proposed major highway projects having traffic flow or safety deficiencies shall receive a minimum requirement score of 10 points will require a benefit-cost analysis consistent with the department’s best practice methodologies. Only those projects generating a benefit-cost ratio of at least 1.0 shall be eligible for recommendation to the transportation projects commission. Traffic flow or safety deficiencies shall exist if either of the following conditions are satisfied:

Section 117. Trans 210.05 (1), (1) (note), (2) and (2) (b) (note) of the administrative code are repealed.

Section 118. Trans 210.06 of the administrative code is repealed.

Section 119. Trans 210.065 of the administrative code is created to read:
Trans 210.065 Measures. The department shall use its best practices to evaluate and recommend major highway projects to the transportation projects commission. Best practice analytical techniques shall include a detailed review of a project’s ability to enhance Wisconsin’s economy, improve highway mobility and safety, minimize environmental impacts, and serve community objectives. The measurement techniques used to evaluate these goals is continually evolving and improving with expanding data sources and analytical techniques. The evaluation is expected to include the following goals and objectives:

(1) Improving Highway Safety. Major highway projects play an important role in improving the safety of Wisconsin’s highways. Reducing the number of fatalities and injury crashes as well as the property and freight losses associated with these crashes is a primary goal of the department. A crash analysis shall be performed to determine the number and severity of the crash problems on the affected highway.

(2) Enhancing Wisconsin’s Economy. Major highway projects shall be evaluated to determine their ability to enhance Wisconsin’s economy. A key component is estimated lower travel costs, which serve to increase the competitiveness of existing businesses and enhance Wisconsin’s ability to maintain and compete for jobs. The department shall use benefit–cost analysis procedures as the primary foundation of this evaluation to determine the economic viability of candidate projects. The benefit–cost analysis shall demonstrate that the reductions in travel costs exceed the costs of design, construction, and long–term rehabilitation and maintenance costs of the facility. The analysis of reduced travel costs shall include estimated travel time savings, safety savings, and vehicle operating cost savings. Additionally, the analysis shall carefully consider critical supply chain corridors to support projects that are most critical for maintaining and preserving
an efficient and reliable network for manufacturers and shippers. The economic analysis shall also consider those areas of Wisconsin that are projected to have more growth in the amount of employment and tourism.

(3) Improving Traffic Flow. Major highway projects play a significant role in improving traffic flow and reducing highway congestion. Reducing highway congestion improves highway efficiency by reducing the total hours of vehicle delay, and also improves travel reliability for individuals and businesses. An evaluation of traffic flow needs on the corridor shall be used to demonstrate the level and extent of recurring congestion and the variability in nonrecurring congested conditions on the corridor. Recurring congestion results from regular peak period conditions where the roadway is inadequate for the volume of vehicles. Nonrecurring congestion exists when wide fluctuations in travel times occur due to events such as incidents, bad weather conditions, special events, holiday traffic, and work zones.

(4) Serving Community Objectives. Overall community support is critical for the proposed major highway project. The level of community support shall be demonstrated using the results of the comprehensive public outreach and involvement that occurs during the detailed environmental document process (National Environmental Policy Act and/or Wisconsin Environmental Policy Act).

(5) Minimizing Environmental Impacts. The evaluation process recognizes that major highway projects can have effects on the quality of the human environment in the regions they serve. The environmental evaluation shall be based on the results of the detailed environmental document process (National Environmental Policy Act and/or Wisconsin Environmental Policy Act).
