Assumptions Used in Arriving at Fiscal Estimate

One-time costs estimated at \$10,034.23, as outlined in the attachment that could be absorbed within the agency's operating budget. We also estimate that there would be substantial IT-related costs for required changes to the ePDMP. At this time, the best estimate we have for the required IT-related costs for changes to the ePDMP would be between \$180,000 and \$300,000 based on information provided by the current IT vendor. These costs likely could not be absorbed within the agency's operating budget.

Long-Range Fiscal Implications

Ongoing annual costs estimated at \$2,425.77, as outline in the attachment that could be absorbed within the agency's operating budget.

Supplies and Services

Classification	Amount	Brief Description
Wisconsin Interactive Network	\$180,000- \$300,000	The CSB and DSPS will require new administrative functions to monitor, review and accurately attribute to patients the data from the new sources (similar to the existing law enforcement alert functionality). This administrative functionality also includes updates to existing reporting and new reporting functionalities that we believe CSB and DSPS would need to administer the new requirements. The PDMP must create a new patient record in the system if the patient does not exist in the system already (which would mean that the patient has not been dispensed a controlled substance since 2013). This body of work is particularly large because it depends the current operations of the ePDMP in which prescription records form the entire basis of all patient records. On the lower end of the estimate, we have estimated based the work to create mostly manual-driven user and administrative functionality. On the higher end of the estimate, we have estimated the work required to automate as much of the process as possible to minimize the manual requirements for users and PDMP administrators.
