Description									
disinfection of drinking water supplied by a municipal water system									

Assumptions Used in Arriving at Fiscal Estimate

The bill requires a municipal water system to provide continuous disinfection of the water that it provides.

Local Fiscal Impact

The Department estimates an annual, ongoing increase in local government costs of approximately \$114,300, in addition to a one-time cost increase of \$229,000.

Annual Local Government Costs

- a. There are currently 56 municipal systems in Wisconsin serving water that is not disinfected. This statutory change would require these systems to begin disinfecting 36 months after publication. The Department estimates that chemicals for disinfection at these systems will cost an average of 160/month. Therefore, 56 systems x 160/month x 12 months = 107,520.
- b. The Department estimates that this bill will require 56 systems to conduct disinfection by-product monitoring. Disinfection by-product monitoring requires systems to collect 1 sample once every 3 years at a cost of \$361/sample. Therefore, 56 systems x \$361/sample (once every 3 years) = \$20,216 or \$6,738 per year.

One-time Local Government Costs

- a. There are currently 56 systems in Wisconsin serving water that is not disinfected, although all systems are required to have the necessary equipment to disinfect. The Department estimates that the additional equipment required for permanent disinfection, which includes a scale, a holding tank and the cost of installation, is 1,200 per system. Therefore, the cost for this is $56 \times 1,200 = 67,200$
- b. There are currently 56 systems in Wisconsin serving water that is not disinfected. If these systems are required to begin disinfecting, they will also be required to conduct preliminary monitoring for disinfection by products. This will require two samples per quarter at a cost of \$361/sample. Therefore, 56 systems x 2 samples/quarter x 4 quarters x \$361 = \$161,728.

Costs do not include any additional treatment beyond disinfection or potential safety equipment, such as an eye washing station. Systems that select disinfection using chlorine may incur additional costs related to the presence of iron and manganese in the water. Treatment for iron and manganese is not required by rule.

Long-Range Fiscal Implications
