Analysis by the Legislative Reference Bureau

This bill makes changes to the well compensation grant program administered by the Department of Natural Resources.

Under the program currently, an individual owner or renter of a contaminated private well, subject to eligibility requirements, may apply for a grant from DNR to cover a portion of the costs to treat the water, reconstruct the well, construct a new well, connect to a public water supply, or fill and seal the well.

Under current law, a well that is contaminated only by nitrates is eligible for a grant only if the well is a water supply for livestock, is used at least three months in each year, and contains nitrates in excess of 40 parts per million. The bill eliminates these restrictions, making wells contaminated only by nitrates eligible for the program more generally.

Current law requires DNR to allocate money for payments of claims under the program according to order in which claims are received. The bill retains this requirement but provides that, among claims for contamination only by nitrates, DNR must allocate payments according to a specified priority ranking.
SENATE BILL 724

The bill also requires DNR to award grants for the remediation method that is most effective for the health and welfare of the claimant. In addition, the bill provides that, of the amounts appropriated to DNR for the program, at least $200,000 must be allocated for claims of water containing nitrates at 10 to 25 parts per million unless DNR determines there are insufficient claims at that level to expend those moneys.

For further information see the state and local fiscal estimate, which will be printed as an appendix to this bill.
