Assumptions Used in Arriving at Fiscal Estimate

This bill expands the types of property that qualify for the sales and use tax exemption provided under current law for products whose power source is wind, solar radiation, or gas generated from the digestion of animal manure and other agricultural waste. Under the bill, the sales and use tax exemption applies to tangible personal property that is used to store electricity or heat and has at least one kilowatt of energy storage capacity, other than batteries for use in electric vehicles, and the hardware required for installation of such property.

According to the Wood Mackenzie Energy Storage Monitor, the energy storage market is estimated to be \$7.1 billion in 2022. The Wisconsin share of US population is about 1.7%, however Wisconsin has a lower share of alternate energy product adoption. Assuming the Wisconsin share of energy storage is one percent, the Wisconsin energy storage market is estimated to be \$71.0 million. The department does not have data on the share of such expenditures that would qualify under the bill. To the extent the market for such products is smaller/larger in Wisconsin as a result of usage and/or eligibility, the estimate will vary.

The department estimates sales and use tax to decrease by about \$3.6 million ($\$71.0 \text{ million} * 5\%$) on an annual basis under the bill.

County taxes were 8.3% of state sales taxes in FY 2021. Assuming this percentage does not change, county sales and use taxes would decrease by about \$295,000 ($\$3.6 \text{ million} * 8.3\%$) annually.

Long-Range Fiscal Implications
