### Analysis of the Rule - Rule Effect - Reason for the Rule

The U.S. Environmental Protection Agency (EPA) has revoked National Ambient Air Quality Standards (NAAQS) for total suspended particulate matter (TSP) and annually-averaged particulate matter less than 10 micrometers in diameter (PM<sub>10</sub>) and promulgated new NAAQS for particulate matter less than 2.5 micrometers in diameter (PM<sub>2.5</sub>). Related to these NAAQS changes, EPA revised the monitoring requirements. The proposed rule revisions would update the ambient air standards for particulate matter in ch. NR 404 and the monitoring requirements in ch. NR 484 to reflect the NAAQS changes. This would assure that the Wisconsin Administrative Code is consistent with the NAAQS for particulate matter, as required under s. 285.21(1)(a), Stats., and reflect the science of particle pollution effects on human health.

If any areas in the state are designated as nonattainment for the new air quality standards, the Department is required to develop an air quality state implementation plan to ensure that the ambient air quality standards are attained and maintained in those areas.

If the TSP air standard is repealed, the air permitting process may be shortened since the modeling and analysis for particulate matter impacts would focus solely on PM<sub>10</sub> emissions. The fugitive dust provisions in s. NR 415.04 would not be directly affected by the repeal of the TSP air standard, since these provisions are not expressly related to having a TSP ambient air standard, but rather are focused on "fugitive dust" as defined in s NR 415.02(2).
