

Report to
Legislative Council Rules Clearinghouse
Ch's NR 1, 10, 13, and 45 Wis. Adm. Code
Natural Resources Board Order WM-11-13

Wisconsin Statutory Authority

Department authority to conduct a variety of habitat and wildlife management activities is established in ss. 23.09(2)(b), (d), (h), (k), (km), and (p), Stats. These sections authorize rulemaking related to deer and deer habitat management and: plans and priorities for conservation, game refuges, cooperative forest protection, research, resources inventory, and disease control. These sections authorize many of existing provisions of Ch. NR's 1 (Natural Resources Board Policy), 11 (closed areas), 15 (game refuges), and 45 (use of department properties), Wis. Adm. Code.

The primary authority to establish hunting regulations for deer and other species is established in s. 29.014 Stats. This section directs the department to establish and maintain open and closed seasons, bag limits, size limits, rest days, and other conditions for the taking of game that conserves the game supply and provides citizens with good hunting opportunities. This section authorizes many of the existing provisions of Ch. NR's 8 (license and permit procedures), 10 (game and hunting) and 19 (Miscellaneous Fur, Fish, Game and Outdoor Recreation), Wis. Adm. Code.

The wildlife damage and nuisance program and rulemaking authority are established in s. 29.889 (2) (b) Stats., which directs the department to establish rules for program eligibility and funding, methods of abating damage, forms and procedures, prorating claims, and record keeping, audits and inspections. This is the authorizing legislation for much of Ch. NR 12, Wis. Adm. Code, related to wildlife damage.

Rules related to Chippewa treaty rights (Ch. NR 13) are promulgated under general authority to establish hunting regulations in s. 29.014, Stats., and these rules are the department's interpretation of how laws must be interpreted or limited in order to comply with the general limitations on state regulatory authority expressed in *Lac Courte Oreilles v. State of Wisconsin*, [668 F. Supp. 1233](#) (W.D. Wis. 1987) and the specific limitations expressed in the regulatory phase of the Voigt litigation. (See e.g., *Lac Courte Oreilles v. State of Wisconsin*, [707 F. Supp. 1034](#) (W.D. Wis. 1989).

Additional specific rule making authority was established by 2013 ACT 20, the biennial state budget. The Deer Management Assistance Program is created in s. 29.020, Stats., and the department is directed to promulgate rules and establish fees. In s. 29.040, Stats., the department is authorized to promulgate rules that implement recommendations of the 2012 deer trustee's report. Under s. 29.181 (4), Stats., the department is authorized to establish by rule the fee for a bonus deer hunting permit that is issued for use in a county or deer management area where CWD has been identified.

Federal Authority

These state rules and statutes do not relieve individuals from the restrictions, requirements and conditions of federal statutes and regulations. Regulating the hunting and trapping of native species has been delegated to state fish and wildlife agencies.

Court Decisions Directly Relevant

None.

Analysis of the Rule – Rule Effect – Reason for the Rule

Implementation of the Deer Trustee's report will result in establishing a number of new policies for deer management and hunting management compared to current rules. The primary policy alternatives evaluated in development of these rules are ones recommended in the report. Throughout this rulemaking process, the department and its partners did evaluate other policy alternatives as they were identified.

The full report is located on the Wisconsin Department of Administration's website at: <http://www.doa.state.wi.us/section.asp?linkid=239&locid=0>

Revisions to Ch. NR 1 are minor and consist of an update to Natural Resources Board policy so that the term "population objective" and "goal" are used consistently throughout the board order and for concise wording. This rule order favors the term "objective" to describe the deer population level that management activities are designed to achieve. The terms "objective" and "goal" are very similar and "objective" is favored in this rulemaking because it was a recommendation of the trustee's report.

Chapter NR 10 establishes most of the deer population management policy and practices and hunting regulations that are in place today. Currently, Ch. NR 10 establishes the Sex-Age-Kill model for estimating deer populations, deer population goals, and deer management units. These rules repeal that specific population model from the chapter. However, these rules do not prohibit the department from continuing to analyze deer populations using the Sex-Age-Kill model or others as methods of developing population information. These rules will replace the current population goals by eliminating numeric goals and replacing them with a simplified statement of objectives to "increase, stabilize, or decrease the deer population." These rules establish a set of metrics to monitor progress towards the objective. These rules significantly reduce the number of deer management units. These rules do not change the department's current requirement to evaluate deer management unit boundaries and population goals or objectives on a recurring three year basis.

Under these rules, the department will be able to modify antlerless harvest quotas, and permit levels on an annual basis. These rules establish specific requirements to consult with certain individuals in establishing quotas each year. Historical demand for antlerless permits has not been a factor that the department was required to consider in quota setting in the past but would be a mandatory consideration under these rules. Under this proposal, hunters in most of the state will continue to receive an antlerless deer tag with the purchase of a firearm or archery license. This tag will be comparable to the current "herd control unit" tag which is issued in units that are 20% or more over the established population goal. Under the proposal, these tags will be valid in any farmland unit. The department currently issues additional herd control tags for the cost of a \$2.00 issuance fee but those tags will be discontinued by this rule. Under this proposal, the standard fee of \$12.00, also the current fee for a bonus permit, will apply for all antlerless permits which are in addition to the one that was issued with hunting licenses. These rules also establish a \$12.00 fee for additional antlerless tags which allow harvest of deer in the CWD-affected area. Under statute, \$5.00 of the fee for these permits will be credited to an account for management and testing of chronic wasting disease. Finally, through the Deer Management Assistance Program, these rules allow establishing unique antlerless deer permits that are specific for use on properties enrolled in the Deer Management Assistance Program. A recommendation resulting from the public involvement process that preceded development of these rules was that the fee for bonus permits should be \$10.00. That is not proposed in these rules because the bonus permit fee is already established by statute and the department does not have rulemaking authority to change it. Other permits, the fee for which the department does have rulemaking authority, are generally also \$12.00 for consistency with bonus permits.

A variety of related hunting regulations changes are proposed in these rules. Many of them are simplifications to current rules. Changes include the names for permits and the allowable use of various deer permits. Deer carcass tags, tagging, and transportation requirements are modified where possible in order to simplify regulations or as opportunities will arise during development of new automated licensing systems. The current requirement to register deer is replaced in these rules with a more customer-friendly harvest reporting procedure using telephone or internet. Black bear are another species for which in-person registration of harvested animals is required. These rules will modify bear harvest recording requirements because deer and bear registration occur at the same locations and through the same process under current rules. These rules will eliminate deadlines to register deer and bear that currently vary by season, harvest method, and location. Instead, a simple statewide requirement to register deer and bear harvest before midnight of the date of harvest is established. This allows fewer hours to register an animal than under current law but electronic registration will be significantly more convenient. Faster registration of deer will provide the department and others who are interested with very timely harvest information. The shorter deadline may also help with enforcing bag limit restrictions. The option to require in-person registration of deer carcasses is preserved in areas that are part of a CWD affected area or where necessary for deer population and herd health monitoring purposes. The department could take advantage of this authority in order to collect tissue specimens for sampling for a wide variety of diseases or biometrics associated with deer populations. Finally, in order to assure hunter accountability and compliance with group bagging restrictions, these rules establish that a deer carcass possessed in the field must be accompanied by the person who tagged it. For practical purposes, this requirement is the same as current rules because in-the-field registration of harvested deer was not possible previously. However, now that deer could be registered while in the field, rules will continue to require that the person who tagged the carcass accompany it during dragging or other field transport. Deer that have been registered could be transported by other people on public roads or possessed at home.

Season date modifications will have the impact of opening a number of refuges, which are established in NR 11 and 15, to additional deer hunting during the late firearm season that begins on December 24. These refuges are located primarily on department managed lands and most of them were established to provide undisturbed resting areas for migrating waterfowl. This deer hunt will occur very late in fall migration and will normally be after all waterfowl seasons are closed.

The department is recommending deer hunting season date modifications as a result of this rulemaking. While the report generally recommended that, "keeping seasons and bag limits consistent for longer periods of time would allow better assessment of management progress", it is challenging to discuss management system changes of this scale without considering season dates. These rules will maintain the current season for hunting deer by archery methods. This proposal maintains the traditional Wisconsin firearm deer season opener on the Saturday before Thanksgiving and 9 day structure. The current 10 day muzzleloader season is extended by four days under this proposal and this extended muzzleloader-only season will replace what had previously been a statewide four day any-firearm season for antlerless deer only. This proposal establishes an additional firearm deer hunting opportunity in the portion of the state South of HWY 64 beginning on December 24 and continuing to the Sunday nearest January 6. This holiday deer hunt occurs under current rules in the CWD management zone. It has been a low-pressure event but, for some, a greatly appreciated opportunity for additional deer hunting at a time when families are together and around which some new deer hunting traditions are developing. The late firearm season, or holiday hunt, is similar to seasons offered in other adjacent states and will occur during a time of the year when more residents are traditionally taking vacation or home for the holidays as in the case of veterans. Finally, only in areas that are part of the CWD season under current rules, archery deer hunting has been allowed on the day before the traditional 9-day firearm season opens. Under this proposal, the archery deer season will be open statewide on the day before the traditional 9-day firearm season for consistency with the rest of the state.

Under current rule, numerous state parks are listed in the table that establishes deer seasons because the DNR was required to establish hunting seasons in state parks by administrative rule. Under 2011 ACT 168, hunting is allowed at state parks except where, or at times when, the Natural Resources Board has prohibited the activity in order to protect public safety or a unique plant or animal community. Because the old presumption that state parks are closed unless opened by rule has been replaced by a presumption that state parks are open unless board action has been taken to close them, most state park names have been removed from the table. Those parks will be open to deer hunting under normal statewide regulations at times when hunting has not been prohibited for safety related purposes. A number of parks, which had deer hunting seasons or regulations which are not the same as the ones that apply statewide are still found in the season table in order to preserve those unique seasons or regulations. All state park deer management unit number designations have been repealed and state parks are simply referred to by their name. Finally, current rules require that deer hunters in state parks in the CWD management zone obtain a free access permit to a park. The number of access permits is not restricted. This rule repeals that requirement because it is no longer needed considering that access to other parks will not be monitored to this extent.

The trustee's report generally recommends a more passive approach than current department policy to the management of Chronic Wasting Disease. This approach is reflected by the establishment of deer seasons in CWD affected areas that are the same as in other areas of the state. Management of CWD in the state's deer herd is still important under these rules. These rules retain the firearm deer season occurring over the Christmas holiday, the option to issue landowner permits for sampling or for additional harvest opportunities, and provide advice on when an October firearm season will be held if necessary in a CWD areas. While the promulgation of emergency rules is required under s. 29.016, Stats., before an October firearm season can be held, establishing by permanent rule when that season would occur is intended to simplify development of an emergency rule if that authority is utilized. These rules modify the current CWD zone management system by designating it as the CWD-affected area using county boundaries to describe the zone instead of the previous DMU configuration based on roads and natural features such as rivers. A process for efficiently adding new counties as CWD-affected areas when the disease is discovered in new areas is created. The department currently establishes numeric population goals for deer units that are in a CWD zone. Those goals are modified by these rules so that they are consistent with the objectives for other units to increase, maintain, or decrease the density of the deer herd.

This rulemaking establishes a Deer Management Assistance Program that will allow landowners and hunters to work together with the department to manage deer on a site-specific basis. The program will actively involve members of the public in the collection, analysis, and reporting of deer harvest information and improve management of the deer herd at the local level. The rule establishes enrollment fees for participation in the program and statute has established that revenue will be credited back to implementation of the program. This proposal establishes a separate half-price fee of \$6.00 for antlerless deer hunting permits obtained through participation in the program. The lower fee is intended to be an incentive for participation. The program is a central recommendation of the report which recommended that the department establish: a) applicability to private and public lands, b) initial areas eligible to participate, c) administration of DMAP, d) funding, e) personnel and training, f) minimum property size to participate, g) fees, h) participation requirements, i) data collection requirements, j) registration of deer harvested on DMAP properties, k) data analysis and reporting, and l) assessment of DMAP effectiveness.

Chapter NR 13 is intended to regulate off-reservation treaty rights of treaty rights participants recognized by Lac Courte Oreilles Band v. Voigt, 700 F. 2d 341 (7th Cir. 1983). Modifications to Ch. NR 13 updates a cross reference with Ch. NR 10. Other out-of-date cross-references exist in this chapter but are not revised here as that might be more appropriate as a stand-alone, more thorough review. The report did not recommend changes to this chapter of administrative code.

Agency Procedures for Promulgation

Public hearings, followed by Natural Resources Board adoption, followed by legislative review.

Description of any Forms (attach copies if available)

Fiscal and economic impact analysis.
