Ag 90.03 Quality standards. Grades for eggs, determined after candling, are AA, A, B and Undergrade. Quality standards for each grade are as follows:

(1) **AA.** The shell shall be clean, unbroken and practically normal. The air cell shall not exceed $\frac{1}{8}$ inch in depth and be practically regular. The white shall be clear and firm so that the outline of the yolk is only slightly defined when the egg is twirled before the candling light. The yolk shall be free from apparent defects.

(2) **A.** The shell shall be clean, unbroken and practically normal. The air cell shall not exceed $\frac{3}{16}$ inch in depth and shall be practically regular. The white shall be clear and at least reasonably firm so that the outline of the yolk is only fairly well defined when the egg is twirled before the candling light. The yolk shall be practically free from apparent defects.

(3) **B.** The shell shall be reasonably clean, unbroken, and may be slightly abnormal. The air cell shall not exceed $\frac{3}{8}$ inch in depth and may be free. The white shall be clear but may be slightly weak so that the outline of the yolk is well defined when the egg is twirled before the candling light. The yolk may appear slightly enlarged and slightly flattened and may show other definite but not serious defects.
