9. Deer quotas for 1977 deer season. The department will issue party permits in sufficient numbers to assure the harvest of the number of deer for each quota area indicated in the following table. Quota areas are composed of single management units or parts of units, the boundaries of which are established in Wis. Adm. Code section NR 10.24. The number of party permits to be issued to harvest the indicated number of deer is determined by an average of the hunter success rates from the most recent 3 previous seasons with party permits in each quota area or by an average of fewer seasons where a 3-year average is not available. In establishing a quota for an area without a prior history of party permits, the average success rates of adjacent quota areas are applied. Party permit success rates used to compute the number of permits to be issued for each management unit are those published by the department in annual deer season reports.
