

ORDER
OF THE STATE OF WISCONSIN DEPARTMENT OF AGRICULTURE,
TRADE AND CONSUMER PROTECTION
ADOPTING RULES

The state of Wisconsin department of agriculture, trade and consumer protection adopts the following order to amend s. Ag 60.13(4) and to repeal and recreate ch. Ag 10, relating to animal disease prevention and control.

Analysis Prepared by the Department of Agriculture
Trade and Consumer Protection

Statutory authority: ss. 93.07(1), 95.26(6), 95.27(8), 95.38(3), Stats.

Statutes interpreted: ss. 93.07(10), 95.16, 95.22, 95.23, 95.25, 95.26, 95.27, 95.38, 95.43, 95.46, Stats.

This rule reorganizes the current rules dealing with the prevention and control of animal diseases. It separates the current rules into subchapters for bovine, swine, equine, poultry, and other animal diseases. It also contains separate subchapters for definitions, general matters, and enforcement. Except for 3 new provisions dealing with brucellosis-free goat herds, destruction and removal orders, and unlawful conduct, the proposed rule essentially incorporates current animal disease rules with minor substantive changes. However, the proposed rule makes numerous non-substantive drafting changes to the current rules. These drafting changes are intended to improve clarity and internal consistency, and to conform the rules to currently accepted drafting standards.

General Provisions: The subchapter on general provisions contains three sections. The section on reportable diseases requires veterinarians to report certain contagious, infectious or communicable diseases to the department either immediately or within 10 days. A second section requires veterinarians to report all test results for certain diseases, unless the test samples are analyzed at a department laboratory. Test samples and test reports must be identified with the official individual identification of the animal tested. A third section states that nothing in this chapter constitutes a warranty, by the state of Wisconsin or the department, that any animal is free of disease.

Bovine Diseases: The subchapter on bovine diseases contains 13 sections and deals with brucellosis, tuberculosis, anaplasmosis, mastitis, paratuberculosis, and leukosis. The proposed rule incorporates current rules which establish criteria for certifying bovine herds as brucellosis-free, tuberculosis-free, anaplasmosis-

Revisor of Statutes
Bureau

free, and leukosis-free. This subchapter of the proposed rule also incorporates current rules on identification and reporting requirements for official brucellosis vaccinates, brucellosis test reports, brucellosis test classifications and diagnostic procedures, tuberculosis test reports, anaplasmosis control, detection and control of mastitis, classification of the paratuberculosis status of bovine herds, and indemnities for brucellosis and tuberculosis.

Swine Diseases: The subchapter on swine diseases contains 5 sections and deals with pseudorabies and brucellosis. The proposed rule incorporates current rules which establish criteria for certifying swine herds as pseudorabies negative and brucellosis-free. It also incorporates current rules related to pseudorabies and brucellosis control programs.

Equine Diseases: The subchapter on equine diseases contains no provisions. The current rules also contain no provisions on equine diseases, but it is anticipated that they will be developed in the future and this subchapter is reserved for that purpose.

Poultry Diseases: The subchapter on poultry diseases contains 1 section which is substantively identical to the current rule.

Other Animal Diseases: This subchapter contains 5 sections. One incorporates the current rule which establishes criteria for certifying mink herds as Aleutian disease-free. The others create new rules which establish criteria for certifying goat herds as brucellosis-free, tuberculosis-free, and paratuberculosis-free. Another new rule establishes criteria for certifying sheep flocks as brucella ovis-free.

Enforcement: The subchapter on enforcement expands upon the current quarantine rule and creates 5 new rules. The proposed rule on quarantines specifies that animals under quarantine may not be removed from the premises and provides more specific information about the contents of the quarantine order, the duration of a quarantine, and obtaining review of a quarantine order. One of the newly created rules authorizes the department to summarily order the destruction or removal from this state of any animal which has entered the state in violation of import requirements. The other newly created rule specifies unlawful conduct including selling or moving diseased or quarantined animals, misrepresenting the disease status of an animal, and tampering with an animal's official identification.

SECTION 1. Chapter Ag 10 is repealed and recreated to read:

Chapter Ag 10 ANIMAL DISEASE PREVENTION AND CONTROL

Subchapter I Definitions

10.01 Definitions

Subchapter II General Provisions

10.02 Reportable diseases

- 10.03 Disease testing; reports
- 10.04 State not a warrantor

Subchapter III Bovine Diseases

- 10.10 Brucellosis; official vaccinates
- 10.11 Brucellosis testing
- 10.12 Brucellosis test classifications; diagnostic procedures
- 10.13 Brucellosis indemnities
- 10.14 Brucellosis-free herd; certification
- 10.15 Tuberculosis testing
- 10.16 Tuberculosis indemnity
- 10.17 Tuberculosis-free herd; certification
- 10.18 Anaplasmosis-free herd; certification
- 10.19 Anaplasmosis control
- 10.20 Mastitis; detection and control
- 10.21 Paratuberculosis (Johne's disease); herd certification or classification
- 10.22 Leukosis-free herd; certification

Subchapter IV Swine Diseases

- 10.30 Pseudorabies negative herd; certification
- 10.31 Pseudorabies control
- 10.32 Pseudorabies; vaccination and vaccine control
- 10.33 Brucellosis-free herd; certification
- 10.34 Brucellosis control

Subchapter V Equine Diseases

- 10.40--10.49 RESERVED

Subchapter VI Poultry Diseases

- 10.50 Poultry; disease control

Subchapter VII Other Animal Diseases

- 10.60 Aleutian disease-free herd; mink
- 10.61 Brucellosis-free herd; goats
- 10.62 Tuberculosis-free herd; goats
- 10.63 Paratuberculosis-free herd; goats
- 10.64 Brucella ovis-free flock; sheep

Subchapter VIII Enforcement

- 10.70 Quarantines
- 10.71 Destruction and removal; noncomplying and undocumented animals
- 10.72 Prohibited conduct

SUBCHAPTER I
DEFINITIONS

Ag 10.01 DEFINITIONS. As used in this chapter:

(1) "Accredited tuberculosis-free herd" means a herd of cattle or goats which is certified as tuberculosis-free by one of the following:

- (a) The department under s. Ag 10.17 or Ag 10.62.
- (b) The authorized animal health agency of the state in which the herd is located, under standards comparable to s. Ag 10.17 or Ag 10.62.

(2) "Accredited veterinarian" means a veterinarian who is both of the following:

- (a) Licensed to practice veterinary medicine.
- (b) Specifically authorized by the federal bureau and responsible state agency, pursuant to 9 CFR 160 to 162, to perform animal disease eradication and control functions under state and federal animal health laws.

(3) "Anaplasmosis" means the contagious, infectious disease of cattle caused by Anaplasma marginale.

(4) "Anaplasmosis-free herd" means a herd of cattle which is certified as anaplasmosis-free by one of the following:

(a) The department under s. Ag 10.18.

(b) The authorized animal health agency of the state in which the herd is located, under standards comparable to s. Ag 10.18.

(5) "Anaplasmosis test" means the complement fixation test or other anaplasmosis diagnostic test which is approved by the department and conducted at a laboratory approved by the department or the federal bureau.

(6) "Bison" means American bison of any age or sex, commonly known as buffalo.

(7) "Boar" means an uncastrated male swine that is sexually mature.

(8) "Bovine animal" means cattle and American bison of any age or sex.

(9) "Brucellosis" means the contagious, infectious and communicable disease caused by bacteria of the genus *Brucella*.

NOTE: Brucellosis is also known as Bang's disease, undulant fever, and contagious abortion.

(10) "Brucellosis test" means:

(a) For bovine animals, a blood serum agglutination test, a particle concentration fluorescence immunoassay (PCFIA) or approved supplemental tests conducted according to procedures approved by the department.

(b) For swine, the swine brucellosis card test, the blood serum agglutination test, or approved supplemental tests conducted according to procedures approved by the department.

(11) "Bull" means an uncastrated sexually mature male bovine animal.

(12) "Calf" means a sexually immature bovine animal of either sex.

(13) "Cattle" means any of the various animals of the domesticated genus Bos.

(14) "Certificate of veterinary inspection" means a written certificate prepared by an accredited veterinarian in compliance with s. Ag 11.02(2).

(15) "Certified brucellosis-free herd" means a herd of cattle or goats which is certified as brucellosis-free by one of the following:

(a) The department under s. Ag 10.14 or Ag 10.61.

(b) The authorized animal health agency in the state where the herd is located, under standards comparable to s. Ag 10.14 or Ag 10.61.

(16) "Commingled" means kept or brought in contact with other animals in any environment which permits direct contact between the animals.

(17) "Communicable" means transmissible either directly or indirectly.

(18) "Contagious" means spread by contact, body secretions or fomites.

(19) "Cow" means a female bovine animal after first calving.

(20) "Department" means the state of Wisconsin department of agriculture, trade and consumer protection.

(21) "Exotic disease" means any communicable, contagious or infectious disease of livestock or poultry not known to exist in Wisconsin.

(22) "Exposed" means subjected to a causative agent which may cause the exposed animal to contract a contagious, infectious or communicable disease.

(23) "Federal bureau" means the animal and plant health inspection service of the United States department of agriculture, or any other unit of that department which may be vested with authority to administer federal laws and regulations relating to animal disease control.

(24) "Feeder cattle" means bovine animals, kept for the sole purpose of feeding prior to slaughter, which are not more than 18 months old as evidenced by the absence of permanent teeth, and whose sexual status is one of the following:

(a) Non-spayed female that is not parturient or post-parturient.

(b) Spayed heifer.

(c) Steer.

(25) "Feeder swine" means swine, excluding boars, weighing less than 175 pounds and kept for the sole purpose of feeding for slaughter.

(26) "Flock" means one of the following, as the context requires:

(a) All of the poultry on one farm, except that any group of poultry which has been segregated from other poultry for a period of at least 21 days may, at the discretion of the department, be considered a separate flock.

(b) Any group of sheep maintained on common ground for any purpose; or 2 or more groups of sheep, under common ownership or supervision, whose members intermingle between groups even if the groups are geographically separated.

(27) "Fomite" means an inanimate object or substance which serves to transfer infectious organisms from one animal to another.

(28) "Foreign disease" means any communicable, contagious or infectious disease of livestock and poultry not known to exist in the United States.

(29) "Hatchery" means premises used to hatch poultry, including buildings, incubators, hatchers and auxiliary equipment.

(30) "Heifer" means a female bovine animal up to first calving.

(31) "Herd" means either of the following:

(a) A group of animals maintained on common ground for any purpose.

(b) Two or more groups of animals of the same species, under common ownership or supervision, whose members intermingle between groups even if the groups are geographically separated.

(32) "Individual herd plan" means a written herd management and testing plan that is designed by the department to control and eradicate an infectious, contagious or communicable disease from an affected herd.

(33) "Infectious" means caused by a pathogenic agent.

(34) "Interstate health certificate" means a written health certificate prepared by an accredited veterinarian in compliance with s. Ag 11.02(1).

(35) "Leukosis" means the condition of cattle caused by bovine type C oncovirus manifested by the presence of bovine leukosis virus antibodies, which may result in lymphosarcoma or lymphocytosis.

(36) "Leukosis-free herd" means a herd of cattle which is certified as leukosis-free by one of the following:

(a) The department under s. Ag 10.22.

(b) The authorized animal health agency of the state in which the herd is located, under standards comparable to s. Ag 10.22.

(37) "Leukosis test" means a test, approved by the department for the detection of bovine leukosis antibodies in cattle, which is conducted at a laboratory approved by the department or the federal bureau and evaluated by a state or federal epidemiologist.

(38) "Livestock" means farm animals including bovine animals, sheep, goats, swine and horses.

(39) "Mastitis" means a contagious and infectious disease of bovine animals, manifested by inflammation of the mammary gland, which is caused by a variety of microorganisms.

(40) "Mycoplasmosis" means a disease of poultry caused by Mycoplasma gallisepticum.

(41) "National poultry improvement plan" means the national poultry improvement plan established by the federal bureau under 9 CFR 145.

(42) "Negative" means an official diagnostic test result which discloses no evidence of disease.

(43) "Official back tag" means an identification back tag, approved by the federal bureau, that conforms to the 8-character alpha-numeric national uniform backtagging system.

NOTE: Examples of official back tags include the official Wisconsin bovine back tag and the official Wisconsin swine back tag.

(44) "Official ear tag" means an identification ear tag, approved by the federal bureau, that conforms to the 9-character alpha-numeric national uniform eartagging system.

NOTE: An official ear tag uniquely identifies each individual animal with no duplication of the alpha-numeric identification, regardless of the materials or colors used. Examples of official ear tags include the official Wisconsin identification tag, the official U.S.D.A. Wisconsin vaccination tag, and the official Wisconsin swine ear tag.

(45) "Official individual identification" means a set of identifying characters which is uniquely associated with an individual animal, and which consists of one of the following:

- (a) The animal's official ear tag number.
- (b) The animal's breed association tattoo.
- (c) The animal's breed association registration number.
- (d) Other identification approved by the department.

(46) "Official spayed heifer" means a female bovine animal which has had its ovaries removed and is identified by an open spade brand or spay certificate.

(47) "Official vaccinate" means a female bovine animal which is vaccinated against brucellosis, and identified and reported as a vaccinate, in compliance with s. Ag 10.10 or comparable laws of another state.

(48) "Originates" means coming from a herd in which the animal was born or spent the last 4 months before being imported to this state or moved to the current herd. A herd of origin does not include a temporary assembly of animals for sale or shipment.

(49) "Paratuberculosis" means the infectious and communicable disease of domestic ruminants, commonly known as Johne's disease, which is caused by Mycobacterium paratuberculosis.

(50) "Paratuberculosis herd sample" means a collection of individual samples taken concurrently from all animals in the herd that are at least 20 months of age on the date that the samples are taken.

(51) "Paratuberculosis official vaccinate" means a bovine animal originating from a paratuberculosis program herd or a documented paratuberculosis-free herd, which was vaccinated with the Mycobacterium paratuberculosis bacterin between 5 and 35 days of age, and was identified with an official ear tag or other official identification and appropriately tattooed.

(52) "Paratuberculosis reactor" means a ruminant which has a positive fecal culture for Mycobacterium paratuberculosis, or which is positive to any other test approved by the department for identification of paratuberculosis.

(53) "Paratuberculosis sample" means a fecal sample or other sample approved by the department.

(54) "Paratuberculosis test" means a test approved by the department, conducted at a laboratory approved by the department or the federal bureau, to determine whether an animal is infected with Mycobacterium paratuberculosis.

(55) "Person" includes any individual, corporation, partnership, association, or firm.

(56) "Poultry" means domesticated fowl, including chickens, turkeys, waterfowl, and game birds, except doves and pigeons, which are bred for the primary purpose of producing eggs or meat.

(57) "Pseudorabies" means the contagious, infectious, and communicable disease of livestock and other animals which is caused by the pseudorabies herpes virus, and which is also known as Aujeszky's disease, mad itch, or infectious bulbo-paralysis.

(58) "Pseudorabies test" means the negative serum neutralization (SN) test or another pseudorabies diagnostic test which is approved by the department and conducted at a laboratory approved by the department or the federal bureau.

(59) "Pullorum" means a disease of poultry caused by Salmonella pullorum.

(60) "Qualified pseudorabies negative herd" means a herd of swine which is certified as being pseudorabies negative by one of the following:

(a) The department under s. Ag 10.30.

(b) The authorized animal health agency in the state where the herd is located, under standards comparable to s. Ag 10.30.

(61) "Reactor" means an animal which has reacted positively in a conclusive diagnostic test for an infectious, contagious or communicable disease.

(62) "Slaughtering establishment" means a slaughtering establishment which is licensed by the department, or subject to inspection by the United States department of agriculture.

"Slaughtering establishment" includes all premises used in connection with a slaughter operation.

(63) "Sow" means a sexually mature female swine.

(64) "State veterinarian" means the administrator of the animal health division of the department, or a veterinarian who is authorized by the administrator to act on his or her behalf.

(65) "Steer" means a castrated male bovine animal.

(66) "Supplemental brucellosis test" means the complement fixation test, card test, rivanol plate test, individual brucellosis ring test and other tests approved by the department for the diagnosis of brucellosis.

(67) "Suspect" means an animal which is suspected of having a disease, based on test results or other reliable information, but which is not yet confirmed to have the disease.

(68) "Swine" means a domestic hog or any variety of wild hog.

(69) "Tuberculosis" means the contagious, infectious and communicable disease caused by Mycobacterium bovis.

(70) "Tuberculosis test" means an approved screening test or confirmatory test to determine whether an animal may be infected with tuberculosis. "Tuberculosis test" includes a caudal fold test or a comparative cervical test.

(71) "Typhoid" or "fowl typhoid" means a disease of poultry caused by Salmonella gallinarum.

(72) "Validated brucellosis-free herd" means a herd of swine which is certified as brucellosis-free by one of the following:

(a) The department under s. Ag 10.33.

(b) The authorized animal health agency of the state in which the herd is located, under standards comparable to s. Ag 10.33

(73) "Veal calf" means a bovine animal of either sex, not more than 120 days old, which is kept for the sole purpose of feeding prior to slaughter for veal.

SUBCHAPTER II
GENERAL PROVISIONS

Ag 10.02 REPORTABLE DISEASES. Except as otherwise provided in this section, a veterinarian shall report the following diseases in writing to the department within 10 days after the disease is diagnosed or suspected. The diseases marked with an asterisk require emergency action and shall be reported to the department's animal health division immediately by telephone or other rapid means. An emergency report shall be confirmed in writing within 10 days. Veterinarians are not required to report any disease that has been diagnosed at the department's animal health laboratory, or rabies diagnosed at the state laboratory of hygiene of the department of health and social services.

- (1) Anaplasmosis.
- (2) Anthrax.
- * (3) Any disease which is foreign or exotic to Wisconsin.
- * (4) Avian influenza.
- (5) Bluetongue.
- * (6) Brucellosis.
- (7) Equine infectious anemia.
- * (8) Equine encephalomyelitis (Eastern, Western or Venezuelan).

- (9) Mycoplasmosis (Mycoplasma gallisepticum).
- (10) Paratuberculosis (Johne's disease).
- (11) Potomac horse fever.
- *(12) Pseudorabies.
- (13) Pullorum.
- (14) Rabies.
- (15) Salmonellosis in poultry (Salmonella typhimurium or Salmonella dublin).
- (16) Scrapie.
- (17) Sheep foot rot.
- (18) Swine dysentery.
- *(19) Tuberculosis.
- *(20) Vesicular conditions, including vesicular stomatitis.

Ag 10.03 DISEASE TESTING; REPORTS. (1) VETERINARIAN TO FILE REPORT. Whenever a veterinarian tests an animal for any of the following diseases, the veterinarian shall report the test results to the department within 10 days unless the test sample is analyzed at a department laboratory:

- (a) Anaplasmosis.
 - (b) Brucellosis.
 - (c) Leukosis.
 - (d) Paratuberculosis (Johne's disease).
 - (e) Pseudorabies.
 - (f) Tuberculosis.
- (2) SAMPLES AND REPORTS TO INCLUDE OFFICIAL INDIVIDUAL IDENTIFICATION. Every test sample and every test report submitted to the department under sub. (1) shall be identified with the

official individual identification of the animal to which the sample or test report pertains. If the animal has no official individual identification, the veterinarian shall identify the animal.

Ag 10.04 STATE NOT A WARRANTOR. Nothing in this chapter constitutes a warranty by the state of Wisconsin or the department that any animal is free of disease.

SUBCHAPTER III
BOVINE DISEASE

Ag 10.10 BRUCELLOSIS; OFFICIAL VACCINATES.

(1) VACCINATION PROCEDURE. No bovine animal may be designated as an official vaccinate unless the animal is vaccinated for brucellosis in compliance with all of the following procedures:

(a) A beef breed animal shall be vaccinated when the animal is between 120 and 299 days of age, and a dairy breed animal shall be vaccinated when the animal is between 120 and 239 days of age.

(b) The vaccine used to immunize the bovine animal shall be a Brucella vaccine approved by the federal bureau.

(c) The vaccine shall be administered subcutaneously by an accredited veterinarian.

(2) IDENTIFYING OFFICIAL BRUCELLOSIS VACCINATES.

(a) Vaccination tattoo. Every veterinarian who vaccinates a bovine animal for brucellosis shall apply a vaccination tattoo to the inner surface of the right ear of the animal. The vaccination tattoo shall consist of a number representing the quarter of the year in which the animal was vaccinated, followed by a symbol in the form of a shield containing the letter "V" and the last numeral

of the year in which the animal was vaccinated. Number 1 represents the first quarter of the year (January, February and March). Number 2 represents the second quarter of the year (April, May and June). Number 3 represents the third quarter of the year (July, August and September). Number 4 represents the fourth quarter of the year (October, November and December). No retattooing is permitted.

(b) Vaccination tag. 1. Except as provided under subd. 2, every veterinarian who vaccinates a bovine animal for brucellosis shall insert a vaccination tag in the right ear of the animal. A vaccination tag, which is a form of official ear tag under s. Ag 11.10(1), shall be orange in color and shall conform to the 9-character alpha-numeric national uniform ear tagging system. The alpha-numeric characters shall consist of the prefix "35," followed by the letter "V," "T" or "S," followed by 2 alphabetic and 4 numeric characters. A vaccination tag may not be applied to a nonvaccinate animal. A vaccination tag may not be replaced if lost or removed, but may be replaced by a silver official Wisconsin ear tag.

NOTE: See s. Ag 11.10 related to identification of bovine animals.

2. A vaccination tag is not required under this paragraph for a registered purebred animal, provided that the veterinarian who performs the vaccination records the animal's breed association registration number or breed tattoo on the vaccination report filed with the department under sub. (2).

(3) REPORTING REQUIREMENT. An accredited veterinarian who performs a brucellosis vaccination shall file a vaccination report

with the department within 15 days after the vaccination is performed. The vaccination report shall be filed on a form provided by the department, and shall include the official individual identification of the vaccinated animal. A copy of the completed form shall be furnished to the owner of the official vaccinate, and another copy shall be retained by the accredited veterinarian who performed the vaccination.

Ag 10.11 BRUCELLOSIS TESTING. (1) WHO MAY TEST. No person, except the following, may collect a brucellosis test sample from a bovine animal in this state:

- (a) An accredited veterinarian.
- (b) An employe of the department or the federal bureau.
- (c) A person collecting samples under department supervision at a slaughtering establishment.

(2) TEST METHOD. (a) Except as provided under par. (b), a brucellosis test of a bovine animal shall be conducted at a laboratory approved by the department or the federal bureau, using a method identified under s. Ag 10.01(10).

(b) An on-site brucellosis screening test, conducted by an accredited veterinarian at a livestock market licensed under s. 95.70, Stats., satisfies the brucellosis testing requirement under s. 95.49, Stats., and Ag 11.16, provided that the veterinarian submits the test sample to the department within 24 hours for confirmatory testing.

(3) VETERINARIAN TO FILE REPORT. A veterinarian who collects a brucellosis test sample from a bovine animal shall report the test result to the department within 10 days after the veterinarian

obtains the test result, unless the test sample is analyzed at a department laboratory. A positive reaction on any brucellosis test shall be reported immediately by telephone or other rapid means, and shall be confirmed by a written report to the department within 10 days. The veterinarian shall also provide a copy of the test report to the owner of the animal.

NOTE: See also ss. Ag 10.02 and Ag 10.03.

(4) REPORT FORM. A veterinarian shall submit a brucellosis test report under sub. (3) in writing, on a form provided by the department. The report shall include the official individual identification of the animal tested, and any other information required by the department. Report forms shall be used only for their intended purpose. No person other than a veterinarian may sign the report form.

(5) IDENTIFYING TESTED ANIMALS. If a veterinarian collects a brucellosis test sample from a bovine animal which does not yet have an official individual identification, the veterinarian shall identify the animal by inserting an official eartag in the animal's right ear.

NOTE: See s. Ag 11.10 regarding identification of bovine animals.

(6) BRUCELLOSIS REACTORS. Within 15 days after a bovine animal is classified as a brucellosis reactor based on a brucellosis test, the animal shall be branded and identified for destruction. The animal shall be branded with the letter "B" on the left jaw not less than 2 nor more than 3 inches high, and shall be identified by inserting an official reactor eartag, bearing a serial number, in the animal's left ear.

Ag 10.12 BRUCELLOSIS TEST CLASSIFICATIONS; SUPPLEMENTAL TESTING. Upon receiving a brucellosis test result, the department shall classify the tested animal as negative, suspect or reactor. The department may, in its discretion, use supplemental brucellosis tests to confirm test results, and to evaluate whether animals may be infected with brucellosis.

Ag 10.13 BRUCELLOSIS INDEMNITY. No indemnity may be paid under s. 95.26, Stats., for bovine brucellosis if any of the following occur:

(1) A reactor is slaughtered more than 15 days after it is identified by a reactor tag and branded as provided in s. Ag 10.11(6), unless the department for good cause extends the deadline for slaughter. The deadline for slaughter shall not be extended by more than 15 days.

(2) The claimant failed to clean and disinfect the premises within 15 days after the reactors were slaughtered, unless the department, for good cause, extended the deadline for cleaning and disinfecting the premises. The deadline may not be extended by more than 15 days.

(3) The claim is not accompanied by a report of slaughter certified by a department or federal veterinarian.

Ag 10.14 BRUCELLOSIS-FREE HERD; CERTIFICATION.

(1) INITIAL CERTIFICATION. The department may certify a herd of cattle as a "certified brucellosis-free herd" if the herd owner provides proof that all animals in the herd, except steers, official spayed heifers, calves under 6 months old and official vaccinates under 20 months old have tested negative for brucellosis

in 2 successive brucellosis tests. The tests shall be conducted at a department laboratory not less than 10 months nor more than 14 months apart. In lieu of these test results, the herd owner may submit both of the following:

(a) Reports of three successive negative milk tests, also known as brucellosis ring tests or BRT tests, conducted at a department laboratory at intervals of not less than 3 months nor more than 12 months.

(b) A report of one negative brucellosis test, conducted at a department laboratory within 3 months following the last BRT test under par. (a).

(2) ANNUAL RECERTIFICATION. The department may annually recertify a herd as brucellosis-free if all animals in the herd, other than those exempt under sub. (1), are annually tested with the brucellosis test and found negative for brucellosis. Annual testing for recertification shall be performed not less than 10 months nor more than 14 months after the last annual certification date. If testing for recertification is not completed within 14 months after the last annual certification date, certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(3) CERTIFICATE REVOCATION; REACTOR HERD. (a) If a brucellosis test shows that any animal in a certified brucellosis-free herd is a brucellosis reactor, the certificate shall be summarily revoked by written notice to the herd owner or agent. The revocation notice shall be signed by the state veterinarian. A person adversely affected by a summary revocation

may request a hearing before the department. A request for hearing does not stay the summary revocation.

(b) If a brucellosis-free herd certificate is revoked, the herd may not be recertified except under sub. (1). A quarantined herd may not be certified until the quarantine is released.

(4) CERTIFICATE SUSPENSION; SUSPECT HERD. (a) If a brucellosis test shows that any animal in a certified brucellosis-free herd is a brucellosis suspect, the certificate shall be summarily suspended pending further evaluation of the herd by a department epidemiologist. The suspension notice shall be signed by the state veterinarian, and shall be served on the herd owner or agent. A person adversely affected by a summary suspension may request a hearing before the department. A request for hearing does not stay the summary suspension.

(b) If a brucellosis-free herd certificate is suspended, but no reactors are found in the herd, the herd may be recertified if all suspect animals are slaughtered, removed under department permit, or retested and found not to have an increased titer. Suspect animals do not qualify as members of a recertified brucellosis-free herd.

(5) STATUS OF INDIVIDUAL ANIMALS. No animal qualifies as a member of a certified brucellosis-free herd unless one or more of the following apply:

(a) The animal was in the herd for at least 60 days prior to the last herd test for certification or recertification.

(b) The animal originated from another certified brucellosis-free herd or from a brucellosis-free state and tested

negative for brucellosis within 60 to 120 days after entering the herd.

(c) The animal tested negative for brucellosis within 30 days before entering the herd, and again within 60 to 120 days after entering the herd.

(d) The animal is a steer, an official spayed heifer, a calf under 6 months old or an official vaccinate under 20 months old, and has been in the herd for at least 60 days.

(e) The animal was born to a herd member.

(6) HERD ADDITIONS. No animal may be added to a certified brucellosis-free herd unless the animal meets one or more of the requirements under sub. (5)(b) to (d). Violation of this subsection is grounds for revocation of a brucellosis-free herd certificate, regardless of whether the animal is infected with brucellosis.

Ag 10.15 TUBERCULOSIS TESTING. (1) VETERINARIAN TO FILE REPORT. A veterinarian who performs a tuberculosis test on any animal shall report the test results to the department in writing not more than 10 days after the veterinarian obtains the test results, unless the test sample is analyzed in a department laboratory. A positive reaction on any tuberculosis test shall be reported immediately by telephone or other rapid means, and shall be confirmed by a written report to the department within 10 days. The department or the federal bureau may retest the reactor animal using the comparative cervical test.

NOTE: See also Ag 10.02 and Ag 10.03.

(2) REPORT FORM. Tuberculosis test reports shall be made on official report forms furnished by the department. Official report forms shall be complete and shall be used only for reporting official tuberculosis test results, including intradermal johnin test results. A copy of each tuberculosis test report shall be provided to the animal owner. No person other than a veterinarian may sign a tuberculosis test report.

(3) IDENTIFYING TESTED ANIMALS. If a veterinarian performs a tuberculosis test on any bovine animal which does not yet have an official individual identification, the veterinarian shall identify the animal by inserting an official ear tag in the animal's right ear at the time of testing.

NOTE: See Ag 11.10 regarding identification of bovine animals.

(4) TUBERCULOSIS REACTORS. Within 15 days after a bovine animal is identified as a tuberculosis reactor based on a comparative cervical test, the animal shall be branded and identified for destruction. The animal shall be branded with the letter "T" on the left jaw not less than 2 nor more than 3 inches high, and shall be identified by placing an official reactor ear tag, bearing a serial number, in the animal's left ear.

Ag 10.16 TUBERCULOSIS INDEMNITY. No indemnity may be paid under s. 95.25, Stats., for bovine tuberculosis if any of the following occurs:

(1) A reactor is slaughtered more than 15 days after it is identified by a reactor tag and branded as provided in s. Ag 10.15(4), unless the department for good cause extends the deadline for slaughter. The deadline for slaughter shall not be extended by more than 15 days.

(2) The claimant failed to clean and disinfect the premises within 15 days after the reactors were slaughtered, unless the department for good cause extends the deadline for cleaning and disinfecting the premises. The deadline shall not be extended more than 15 days.

(3) The claim is not accompanied by a report of slaughter certified by a department or federal veterinarian.

Ag 10.17 TUBERCULOSIS-FREE HERD; CERTIFICATION. (1) INITIAL CERTIFICATION. The department may certify a herd of cattle as an "accredited tuberculosis-free herd" if the herd owner provides proof that all animals in the herd over 20 months old have been found negative for tuberculosis in 2 successive tuberculosis tests. The tests shall be conducted not less than 10 months nor more than 14 months apart.

(2) ANNUAL RECERTIFICATION. The department may annually recertify a herd as accredited tuberculosis-free if all animals in the herd over 20 months old are annually tested with a tuberculosis test and found negative for tuberculosis. Annual testing for recertification shall be performed not less than 10 months nor more than 14 months after the last annual certification date. If testing for recertification is not completed within 14 months after the last annual certification date, certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(3) CERTIFICATE REVOCATION; INFECTED HERD. (a) If the results of a comparative cervical test show that any animal in an accredited tuberculosis-free herd is infected with tuberculosis,

the tuberculosis-free herd certificate shall be summarily revoked by written notice to the herd owner or agent. The revocation notice shall be signed by the state veterinarian. A person adversely affected by the summary revocation may request a hearing before the department. A request for hearing does not stay the summary revocation.

(b) If a tuberculosis-free herd certificate is revoked, the herd may be recertified under sub. (1) following the release of any quarantine affecting the herd.

(4) CERTIFICATE SUSPENSION; SUSPECT HERD. If, on any tuberculosis test, an animal in an accredited tuberculosis-free herd shows a positive reaction for tuberculosis, the tuberculosis-free herd certificate shall be summarily suspended pending further testing and evaluation by the department. The suspension notice shall be signed by the state veterinarian and shall be served on the herd owner or agent. A person adversely affected by a summary suspension may request a hearing before the department. A request for hearing does not stay the summary suspension.

(5) STATUS OF INDIVIDUAL ANIMALS. No animal qualifies as a member of an accredited tuberculosis-free herd unless one or more of the following apply:

(a) The animal was in the herd for at least 60 days prior to the last herd test for certification or recertification.

(b) The animal originated from another accredited tuberculosis-free herd, and was a member of that herd of origin when the herd of origin was last tested for tuberculosis.

(c) The animal originated from an accredited tuberculosis-free state and was isolated from other herd members until it tested negative for tuberculosis at least 60 days after entering the herd.

(d) The animal originated from a herd in a modified accredited tuberculosis-free state. An animal does not qualify under this paragraph unless all of the following conditions are met:

1. The herd of origin tested negative for tuberculosis in a herd test of all animals over 24 months of age conducted not more than 12 months before the animal entered the current herd.

2. The animal tested negative for tuberculosis not more than 60 days before the animal entered the current herd.

3. The animal was isolated from other herd members until it tested negative for tuberculosis at least 60 days after it entered the herd.

(e) The animal was born to a member of the herd.

(6) HERD ADDITIONS. No animal may be added to an accredited tuberculosis-free herd unless the animal meets one or more of the requirements under subs. (5)(b) to (d). Violation of this subsection is grounds for revocation of an accredited tuberculosis-free herd certificate, regardless of whether the animal is infected with tuberculosis.

Ag 10.18 ANAPLASMOSIS-FREE HERD; CERTIFICATION. (1) INITIAL CERTIFICATION. The department may certify a herd of cattle as an

"anaplasmosis-free herd" if the herd owner provides proof that all animals in the herd over 20 months old have been found negative for anaplasmosis in 2 successive anaplasmosis tests. Herd tests shall be conducted not less than 10 months nor more than 14 months apart.

(2) ANNUAL RECERTIFICATION. The department may annually recertify a herd as anaplasmosis-free if all herd animals over 20 months old are annually tested and found negative for anaplasmosis. Annual testing for recertification shall be performed not less than 10 months nor more than 14 months after the last annual certification date. If testing for recertification is not completed within 14 months after the last annual certification date, certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(3) CERTIFICATE REVOCATION; REACTOR HERD. (a) If an animal in a certified anaplasmosis-free herd is classified as a suspect or reactor based on an anaplasmosis test, the herd certificate shall be summarily revoked by written notice to the herd owner or agent. The revocation notice shall be signed by the state veterinarian. A person adversely affected by a summary revocation notice may request a hearing before the department on the revocation. A request for hearing does not stay the summary revocation.

(b) If an anaplasmosis-free herd certificate is revoked, the herd may be recertified under sub. (1) following the release of any quarantine affecting the herd. The requirement for the second of 2 successive negative herd tests under sub. (1) is waived and the herd may be recertified if all animals test negative on the first herd test.

(4) STATUS OF INDIVIDUAL ANIMALS. No animal qualifies as a member of an anaplasmosis-free herd unless one or more of the following apply:

(a) The animal was in the herd for at least 60 days prior to the last herd test for certification or recertification under this section.

(b) The animal, which has been in the herd for at least 60 days, originated from another anaplasmosis-free herd.

(c) The animal, which has been in the herd for at least 60 days, tested negative for anaplasmosis within 30 days before entering the herd.

(d) The animal was born to a member of the herd.

(6) HERD ADDITIONS. No animal may be added to a certified anaplasmosis-free herd unless one or both of the following apply:

(a) The animal originates from another anaplasmosis-free herd, and was in that herd of origin when the herd of origin was last tested for anaplasmosis.

(b) The animal tested negative for anaplasmosis within 30 days before entering the herd.

Ag 10.19 ANAPLASMOSIS CONTROL. (1) QUARANTINE. The department shall quarantine every herd of bovine animals in which an anaplasmosis reactor is found.

(2) SEGREGATION; TREATMENT OR SLAUGHTER. Bovine animals classified as anaplasmosis reactors or suspects shall be segregated and treated under department supervision, or shipped to slaughter under a permit issued by the department or an accredited veterinarian. Animals segregated for treatment may be returned to

the herd if all segregated animals are retested and found negative for anaplasmosis at least 45 days after treatment is completed. Animals returned to the herd under this subsection may be released from quarantine if the rest of the herd is released from quarantine under sub. (3).

(3) RETESTING. If bovine animals from a quarantined herd under sub. (1) are found negative for anaplasmosis upon initial testing, those animals shall be retested not less than 60 days after all reactors and suspects are segregated from the herd or sent to slaughter under sub. (2). If, upon retest, all of the animals again test negative for anaplasmosis, they may be released from quarantine.

Ag 10.20 MASTITIS; DETECTION AND CONTROL. (1) SCREENING TESTS. The department may conduct screening tests to detect and control bovine mastitis. The department may conduct screening tests on milk from all dairy herds as frequently as the department considers necessary. Screening test results shall be reported to herd owners if the screening test results indicate a mastitis problem.

(2) FARM INSPECTIONS; TEST PROCEDURES. If 2 or more successive screening tests on milk from a dairy herd indicate the presence of mastitis, or if other evidence of mastitis exists within the herd, the department may conduct a farm inspection. All lactating animals in the herd may be examined by a department approved veterinarian. If clinical evidence of mastitis is found within the herd, the department may issue a notice prohibiting the sale of milk and shall advise the herd owner which animals are

infected. If continued evidence of mastitis is found on any subsequent screening test, the department may take an official herd sample of all milk in bulk tanks or cans on the farm premises. The department shall conduct a bacteriological and microscopic examination of the herd sample to determine whether the milk is insanitary and adulterated under sub. (3). The department may place the milk under holding order pending laboratory examination.

(3) TEST STANDARDS; DETERMINATION OF ADULTERATION. (a) Milk from any herd is deemed to be from sick or diseased animals, and is insanitary and adulterated under s. 97.50, Stats., if any of the following conditions exist:

1. There is clinical evidence of mastitis in one or more cows.
2. A herd sample contains in excess of 750,000 somatic cells per ml.
3. The milk contains pathogenic microorganisms capable of producing mastitis.

(b) Insanitary and adulterated milk shall be rejected by the dairy plant to which the milk is offered for sale, as required under s. Ag 60.13.

(4) CONTROL PROCEDURES; EXCLUSION OF MILK. (a) The department may investigate causes of mastitis in infected herds. In cooperation with the herd owner's veterinarian, the department may suggest methods for mastitis control. If corrective action is not taken by the herd owner and subsequent tests indicate that milk from the herd is insanitary and adulterated, the department may issue an order to the herd owner or agent which does either or both of the following:

1. Prohibits further sale or delivery of milk from the herd. The prohibition shall remain in effect until the herd owner follows a mastitis control program approved by the department or prescribed by a veterinarian, and the incidence of mastitis in the herd is eliminated or substantially reduced as determined by a direct somatic cell count of less than 750,000 per ml.

2. Quarantines individual animals or an entire herd, as necessary for disease control, pursuant to s. Ag 10.70.

(b) A person adversely affected by an order under par. (a) may request a hearing before the department. A request for hearing does not stay the order.

(5) NOTICE TO DAIRY PLANTS. Copies of all notices and orders pertaining to an infected herd under this section shall be furnished to the dairy plant receiving milk from the infected herd. No dairy plant operator receiving notice of a department order prohibiting the sale or delivery of milk from an infected herd may accept milk from the herd while the order is in effect.

Ag 10.21 PARATUBERCULOSIS (JOHNE'S DISEASE); HERD CERTIFICATION OR CLASSIFICATION. The department shall certify or classify every Wisconsin herd of cattle in one of 3 categories, as provided under subs. (1) to (3):

(1) DOCUMENTED PARATUBERCULOSIS-FREE HERD. (a) Initial certification. The department may certify a herd as a "documented paratuberculosis-free herd" if the herd owner or herd manager submits documentation showing that the herd has been tested and found negative for paratuberculosis, based on 4 consecutive paratuberculosis herd samples. Each successive paratuberculosis

herd sample in the 4-sample series shall be taken not less than 10 months nor more than 14 months after the preceding herd sample. Certification shall commence retroactively on the most recent of the 4 herd sampling dates.

(b) Annual recertification. The department may annually recertify a herd as a "documented paratuberculosis-free herd" if the herd owner or herd manager submits a negative paratuberculosis herd test, based on a paratuberculosis herd sample taken not less than 10 nor more than 14 months after the beginning of the most recent certification period. If a herd sample is not submitted within 14 months after the last annual certification date, certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(c) Herd additions. No animal may be added to a "documented paratuberculosis-free herd" unless the addition is approved by the department. Violation of this paragraph constitutes grounds for revocation of a "documented paratuberculosis-free herd" certificate, regardless of whether the animal is actually infected with paratuberculosis.

(d) Status of individual animals. No animal qualifies as a member of a "documented paratuberculosis-free herd" unless one of the following applies:

1. The animal was born to a herd member.
2. The animal was added to the herd under par. (c).
3. The animal tested negative for paratuberculosis as part of the two most recent herd tests.

(e) Certificate revocation; reactor herd. If testing of a "documented paratuberculosis-free herd" discloses any positive paratuberculosis reactors among the herd, the certification shall be summarily revoked by written notice and the herd shall be classified as a "paratuberculosis non-program" herd under par. (3). The revocation notice shall be signed by the state veterinarian, and shall be served on the herd owner or agent. A person adversely affected by a summary revocation notice may request a hearing before the department. A request for hearing does not stay the summary suspension. If certification is revoked, the herd owner or manager may enter into a herd management agreement and qualify the herd for certification as a "paratuberculosis control program herd" under sub. (2).

(2) PARATUBERCULOSIS CONTROL PROGRAM HERD. The owner or manager of a herd of cattle in which paratuberculosis has been diagnosed may enter into a written herd management agreement with the department. The herd management agreement shall include appropriate measures to control paratuberculosis in the herd or to prevent introduction of the disease. Calfhood vaccination shall be limited to those herds in which paratuberculosis has been confirmed, and which are subject to a herd management agreement. The herd owner, the herd veterinarian, and the department shall be parties to the herd management agreement. Upon execution of a written herd management agreement, the herd may be certified as a "paratuberculosis control program herd." The herd management agreement may be terminated by the department for cause, or by the herd owner or manager upon 60 days prior notice to the department.

Termination of the herd management agreement terminates certification of the herd as a "paratuberculosis control program herd." The herd will then be classified as a "paratuberculosis non-program herd."

(3) PARATUBERCULOSIS NON-PROGRAM HERD. Every herd of cattle in this state which is not certified under sub. (1) or (2) shall be classified as a "paratuberculosis non-program herd."

Ag 10.22 LEUKOSIS-FREE HERD; CERTIFICATION.

(1) INITIAL CERTIFICATION. The department may certify a herd of cattle as a "leukosis-free herd" if the herd owner or manager provides proof that all animals in the herd, 6 months of age or older, have been found negative for leukosis in 3 consecutive leukosis tests. Herd samples for each successive test shall be taken no sooner than 90 days and no later than 120 days from the date of the preceding test and shall be referred promptly to the department for testing.

(2) ANNUAL RECERTIFICATION. The department may annually recertify a herd of cattle as leukosis-free if all animals in the herd, 6 months of age or older, are retested and found negative for leukosis. Testing for recertification shall be performed not less than 10 months nor more than 14 months after the last annual certification date. Annual recertification may be based on a single leukosis test. If testing for recertification is not completed within 14 months after the last annual certification date, certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(3) CERTIFICATE REVOCATION. (a) If a leukosis test shows that any animal in a certified leukosis-free herd is positive for leukosis, the certificate shall be summarily revoked by written notice to the herd owner or agent. The revocation notice shall be signed by the state veterinarian. A person adversely affected by a summary revocation may request a hearing before the department. A request for hearing does not stay the summary revocation.

(b) If a leukosis-free herd certificate is revoked, the herd may be recertified under sub. (1) following the release of any quarantine affecting the herd.

(4) STATUS OF INDIVIDUAL ANIMALS. No animal qualifies as a member of a "leukosis-free herd" unless one or more of the following apply:

(a) The animal was in the herd at the time of the last herd test for certification or recertification.

(b) If the animal entered the herd after the last herd test for certification or recertification, the animal tested negative for leukosis in 3 consecutive leukosis tests, as provided under sub. (5)(a).

(c) The animal was born to a member of the herd.

(5) HERD ADDITIONS. No animal may be added to a leukosis-free herd unless one or more of the following apply:

(a) The animal is tested and found negative for leukosis in 3 consecutive leukosis tests. The first test shall be performed not more than 30 days before the animal is added to the herd. The second test shall be performed not less than 90 days nor more than 120 days after the animal is added to the herd and the third test not less than 90 days nor more than 120 days after the second test.

(b) The animal originates from another certified leukosis-free herd, and was in that herd of origin when the herd of origin was last tested for anaplasmosis.

SUBCHAPTER IV
SWINE DISEASES

Ag 10.30 PSEUDORABIES NEGATIVE HERD; CERTIFICATION.

(1) INITIAL CERTIFICATION. (a) The department may certify a herd of swine as a "qualified pseudorabies negative herd" if the herd owner provides proof that all swine in the herd over 6 months of age intended for breeding have been tested with a serum neutralization test or other approved test, and that one of the following applies:

1. All swine over 6 months of age were found negative for pseudorabies.

2. If any of the swine tested positive for pseudorabies, all positive swine were permanently removed from the premises, the premises were cleaned and disinfected, and all remaining swine over 6 months of age were retested and found negative for pseudorabies on 2 successive retests. The first retest shall be conducted not less than 30 days after the premises are cleaned and disinfected. The second retest shall be conducted not less than 30 days after the first retest.

(b) All serological tests under this subsection shall be conducted at a state or federal laboratory.

(2) MAINTAINING CERTIFICATION. To maintain a qualified pseudorabies negative herd certification, a veterinarian shall test for pseudorabies each month at least 10% of all swine in each group

in the herd over 6 months of age. Each animal in the herd shall be tested at least once during the year. Monthly tests shall be conducted on or before the same date each month.

(3) EXPIRATION OF CERTIFICATE. Certification as a "qualified pseudorabies negative herd" expires one year after the certification date unless certification is renewed under sub. (5).

(4) REVOCATION OF CERTIFICATES. (a) A qualified pseudorabies negative herd certificate shall be summarily revoked if any of the following occurs:

1. Any approved test discloses that one or more swine in the herd are positive for pseudorabies.

2. Swine are added from another herd, other than a qualified pseudorabies negative herd, without meeting the requirements of sub. (7).

3. Tests are not conducted as required under sub. (2).

(b) A revocation notice under par. (a) shall be signed by the state veterinarian, and served on the herd owner or agent. A person adversely affected by a revocation notice may request a hearing before the department. A request for hearing does not stay the revocation notice.

(5) ANNUAL RECERTIFICATION. The department may annually renew a qualified pseudorabies negative herd certificate if all animals in the herd over 6 months of age have passed an approved test as provided under sub. (2).

(6) STATUS OF INDIVIDUAL SWINE. No animal qualifies as a member of a qualified pseudorabies negative herd unless the animal was a member of the herd for at least 30 days and was included in

the herd testing under sub. (1) or (2). This does not apply to swine less than 6 months of age at the time of the last herd test, or to swine born to a herd member subsequent to the last herd test.

(7) HERD ADDITIONS. (a) Swine originating from a qualified pseudorabies negative herd may be transferred to another qualified pseudorabies negative herd without additional testing prior to transfer.

(b) Swine not originating from a qualified pseudorabies negative herd may not be added to a qualified pseudorabies negative herd unless both of the following apply:

1. The swine are tested and found negative for pseudorabies within 30 days prior to transfer.

2. The swine are isolated from other swine in the qualified pseudorabies negative herd until the swine are retested and again found negative for pseudorabies. The retest shall be conducted not less than 30 days nor more than 45 days after transfer to the qualified pseudorabies negative herd.

(c) In emergency situations, and with department approval, a boar from other than a qualified pseudorabies negative herd may be introduced into a qualified pseudorabies negative herd without isolation as required under par. (b)2, provided that the boar tests negative for pseudorabies before entering the herd. The boar shall be retested for pseudorabies not less than 30 nor more than 45 days after the pre-entry test. The state veterinarian shall, by written notice, summarily suspend a herd's qualified pseudorabies negative herd certificate if a boar added to the herd fails to pass the required retest. A person adversely affected by a summary

suspension may request a hearing before the department, but a request for hearing does not stay the summary suspension.

(8) IDENTIFICATION. Swine tested for pseudorabies under this section shall be individually identified by an official ear tag, or by another method approved by the department. Test reports submitted to the department shall include the official individual identification of the swine tested.

Ag 10.31 PSEUDORABIES CONTROL. (1) SURVEILLANCE SAMPLES; TESTING. The department shall maintain a program of surveillance sampling for pseudorabies, under which the department obtains blood or tissue samples from Wisconsin swine on a systematic basis, and tests the samples for pseudorabies. Samples taken as part of the surveillance sampling program may include blood samples routinely taken from swine at the time of slaughter.

(2) INVESTIGATION; HERD TESTING. Whenever the department detects pseudorabies in any surveillance sample under sub. (1), the department shall initiate an investigation to determine whether swine herds in Wisconsin have been exposed to pseudorabies. The investigation may include additional testing of swine herds suspected of having been exposed to pseudorabies.

(3) QUARANTINE. The department may, in its discretion, quarantine swine whenever the department reasonably suspects that the swine may be infected with or exposed to pseudorabies. The department may apply the quarantine to all swine located on the premises. The quarantine shall comply with s. Ag 10.70. Before issuing a herd quarantine based on the results from a surveillance sample taken under sub. (1), the department shall consider the

reliability of the sample and test result, and the certainty with which the sample and test result indicate a pseudorabies exposure in the herd proposed for quarantine.

(4) CONDEMNATION. The state veterinarian or designee may condemn and order the destruction of swine whenever he or she determines that condemnation and destruction are necessary to prevent or reduce the spread of pseudorabies, as provided in s. 95.27, Stats.

(5) HERD PLAN. (a) A herd plan is an agreement between the department and an owner of swine for the eradication of pseudorabies. A herd plan shall be designed to eradicate pseudorabies in the affected herd within 24 months after the first date of herd quarantine. The herd plan may include provisions for inspection, examination, sampling, testing, vaccination, quarantine, and disposition of swine and other susceptible animals.

(b) The owner of swine which are quarantined for pseudorabies may enter into a herd plan with the department within 60 days after the initial date of quarantine. If the owner fails to enter into a herd plan with the department within 60 days, the herd owner is no longer eligible to enter into a herd plan, and is no longer eligible for indemnities in the event of swine condemnation or destruction under sub. (4). The department may extend the 60 day time period at its discretion.

(c) Following the signing of a herd plan, the department and the herd owner shall review the owner's performance under the herd plan and the progress of the herd plan at least once every 90 days. Performance and progress shall be documented by the department.

Eradication of pseudorabies shall be accomplished under the herd plan within 24 months after the plan is signed, or within 24 months after the first date of herd quarantine, whichever occurs first. The time period for eradication may be extended by the department. If an owner fails or refuses to comply with a herd plan, the department may give written notice to the owner revoking the owner's eligibility for indemnities in the event of condemnation or destruction under sub. (4). Notice shall be signed by the state veterinarian.

(6) MOVEMENT OF DISEASED SWINE. If the department orders or authorizes the movement of swine infected with or exposed to pseudorabies, the department shall take reasonable steps to notify other herd owners who may be adversely affected by the movement. Notice shall, where feasible, be issued in writing to affected persons at least 10 days prior to movement of the infected or exposed swine. A person adversely affected by the movement of infected or exposed swine may make written or oral comments to the department before the swine are moved.

(7) RIGHT OF HEARING. A person adversely affected by an order for the quarantine, condemnation, movement or destruction of swine under this section, or by a notice under sub. (5)(c) revoking eligibility for indemnities, may request a hearing before the department. A request for hearing shall be made within 10 days after the department's order or notice is received by the affected person.

Ag 10.32 PSEUDORABIES; VACCINATION AND VACCINE CONTROL.

(1) PERMIT. No person may vaccinate swine for pseudorabies

without a permit from the department. The owner of a herd of swine which has been infected or exposed to pseudorabies may request a permit to use pseudorabies vaccine. The department shall grant or deny a vaccination permit request within 5 business days. Permits may be granted to the owner of the swine, at the department's discretion, on the condition that only a veterinarian licensed in this state may purchase and administer the vaccine for use in the owner's herd of swine.

(2) RESTRICTIONS. No person may sell or furnish any pseudorabies vaccine for use in this state unless all of the following conditions are met:

(a) The label on the container shall state the name and address of the manufacturer of the vaccine.

(b) The vendor or supplier shall report to the department, within 15 days of delivery, the name and address of each recipient, the date of delivery and amount of pseudorabies vaccine delivered.

(c) The vaccine may be sold or delivered only to a veterinarian licensed in this state who is authorized to vaccinate swine on behalf of an owner who holds a permit under sub. (1). The number of doses of vaccine supplied shall be limited to the number of doses specified in the permit.

Ag 10.33 BRUCELLOSIS-FREE HERD; CERTIFICATION.

(1) INITIAL CERTIFICATION. The department may certify a herd of swine as a "validated brucellosis-free herd" if the herd owner provides proof that all breeding swine in the herd over 6 months of age which have been segregated from non-breeding swine are found negative for brucellosis in a brucellosis test conducted by an accredited veterinarian.

(2) REVOCATION OF CERTIFICATE. The department shall, by written notice, summarily revoke a validated brucellosis-free herd certificate if a reactor is disclosed in any brucellosis test of the herd, or if swine are added to the herd contrary to sub. (4). A revocation notice shall be signed by the state veterinarian, and shall be served on the herd owner or agent. A person adversely affected by a revocation notice may request a hearing before the department, but a request for hearing does not stay the revocation notice.

(3) ANNUAL RECERTIFICATION. (a) The department may annually recertify a herd of swine as a validated brucellosis-free herd if one of the following conditions are met:

1. All breeding swine in the herd over 6 months of age which have been segregated from non-breeding swine are found negative for brucellosis in a test conducted by a veterinarian not more than 13 months after the last annual certification date.

2. Twenty-five percent of all breeding swine in the herd over 6 months of age have been tested every 3 months and found negative for brucellosis, with each breeding animal tested at least once during the certification period.

3. Ten percent of all breeding swine in the herd over 6 months of age have been tested and found negative for brucellosis each month.

(b) If testing for recertification is not completed within the time period prescribed under par. (a), certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(4) ADDITIONS TO HERD. No swine may be added to a validated brucellosis-free herd unless one or more of the following apply:

(a) The swine originate from another validated brucellosis-free herd.

(b) The swine have tested negative for brucellosis in 2 successive brucellosis tests conducted by a veterinarian at least 30 but not more than 60 days apart. The most recent test shall be conducted not more than 30 days before the swine are added to the validated brucellosis-free herd.

(c) The swine originate from a herd in which all swine over 6 months of age tested negative in a brucellosis test conducted not more than 30 days before the swine are added to the validated brucellosis-free herd.

(5) TEST CLASSIFICATION. Swine brucellosis tests shall be classified "negative" when no reaction on the card test is disclosed in a complete herd test, or when no reaction is disclosed by the agglutination test using a 1-100 or higher dilution.

(6) BLOOD SAMPLES SUBMITTED TO APPROVED LABORATORY. Veterinarians taking blood samples from swine for testing under this section shall submit all blood samples, properly identified, to a laboratory approved by the department or the federal bureau.

(8) IDENTIFICATION TAGS. Swine which have been tested for brucellosis under this section shall be individually identified with an official eartag or by another method acceptable to the department. A veterinarian who conducts a brucellosis test shall submit the test results to the department within 15 days after the veterinarian obtains the test results.

Ag 10.34 BRUCELLOSIS CONTROL. (1) TESTING. The department may test all swine on a farm if there is reason to believe that the herd on that farm may be infected with brucellosis.

(2) BLOOD SAMPLES. Blood samples for brucellosis testing shall be taken by an accredited veterinarian and shall be submitted to an approved federal or state animal health laboratory.

(3) QUARANTINE. The department may tag and brand all swine which are infected with brucellosis and place the entire herd under quarantine until the department determines that the herd is no longer infected. The quarantine shall comply with s. Ag 10.70. No swine may be removed from quarantined premises except directly to a slaughtering establishment.

(4) IDENTIFICATION. (a) Swine which have been tested for brucellosis shall be individually identified with an identification tag, tattoo, or other permanent identification approved by the department.

(b) Swine classified as brucellosis reactors shall be branded or tattooed on the left shoulder with the letter "B" not less than 3 inches in height, and shall be identified by a reactor tag inserted in the left ear.

SUBCHAPTER V
EQUINE DISEASES

Ag 10.40 - Ag 10.49 RESERVED.

SUBCHAPTER VI
POULTRY DISEASES

Ag 10.50 POULTRY; DISEASE CONTROL. (1) PROHIBITIONS.

(a) No poultry may be used for breeding purposes and no poultry

eggs may be used for hatching unless they originate from a flock which is tested annually and classified "U.S. pullorum-typhoid clean" as provided in the national poultry improvement plan. No turkeys or turkey eggs may be used for breeding purposes or hatching unless they originate from a flock which is tested annually and classified "Mycoplasma gallisepticum clean" as provided in the national poultry improvement plan.

(b) No person may use, sell or otherwise transfer any poultry or poultry eggs for breeding or hatching purposes unless the poultry or poultry eggs comply with the requirements of this section and s. Ag 11.40.

(2) GENERAL PROVISIONS. (a) All blood samples for testing under this section shall be drawn by an authorized agent of the department.

(b) All turkeys shall be banded at the time blood samples are drawn. Blood samples shall be identified by band number.

(c) Blood samples drawn from turkeys shall be tested at a laboratory approved by the department. Blood samples drawn from poultry other than turkeys may be field tested by the rapid plate method using approved antigens. Field testing may be conducted by an authorized agent of the department.

(d) Breeder flock and hatchery inspections shall be conducted by the department.

(e) All breeder flock and hatchery owners shall follow sanitation procedures prescribed by the department.

(f) If a flock or hatchery owner, or any person providing poultry disease diagnostic services, obtains test results or

evidence indicating the presence of pullorum, fowl typhoid or other serotypes of Salmonella in poultry, or Mycoplasma gallisepticum in turkeys, that person shall report the test results or evidence to the department within 10 days.

(g) Upon receipt of a report of pullorum or fowl typhoid in any poultry, or of Mycoplasma gallisepticum in turkeys, the department shall conduct an immediate investigation to determine the origin and mode of transmission of the infection.

(h) All poultry flocks classified as reactor, infected or suspect under standards of the national poultry improvement plan shall be quarantined to the premises and may be removed only directly to slaughter. The flock owner shall furnish proof of slaughter upon request by the department. The quarantine may be released following 2 negative tests of the entire flock conducted at least 21 days apart.

(3) PREMISES. No turkey breeding flocks may be commingled with other species of domestic fowl or reared within 100 yards of any other poultry.

(4) HATCHERIES. (a) No operator of a hatchery may hatch any poultry eggs or permit poultry eggs to be on the hatchery premises unless the eggs originate from a flock which complies with this section.

(b) No eggs of any other species of fowl may be hatched in a turkey hatchery.

(c) The department shall inspect poultry hatcheries at least annually.

OTHER ANIMAL DISEASES

Ag 10.60 ALEUTIAN DISEASE-FREE HERD; MINK. (1) QUALIFYING FOR CERTIFICATE. The department may certify a herd of mink as an "Aleutian disease-free herd" if the herd owner provides proof that all mink in the breeder herd have been found negative for Aleutian disease in 2 consecutive counterimmunoelectrophoresis (CEP) plate tests, or other tests approved by the department. The tests shall be conducted at a state approved laboratory not less than 60 nor more than 395 days apart.

(2) REVOCATION OF CERTIFICATE. (a) The department shall, by written notice, summarily revoke the "Aleutian disease-free herd" certification of a herd if any of the following occurs:

1. An animal in the herd is found positive for Aleutian disease in any test approved by the department.
2. Mink are added to the herd in violation of sub. (4).
3. The herd owner violates the requirements of sub. (5).
4. The herd owner fails to report a positive finding for Aleutian disease in any animal in the herd.

(b) A revocation notice under par. (a) shall be signed by the state veterinarian, and served on the herd owner or agent. A person adversely affected by a revocation notice may request a hearing before the department, but a request for hearing does not stay the revocation notice. If certification is revoked, the herd may be not recertified except under sub. (1).

(3) ANNUAL RECERTIFICATION. The department may annually recertify a herd of mink as an "Aleutian disease-free herd" if the herd owner provides proof that all male animals and 10% of all

female animals in the herd have been found negative for Aleutian disease in a CEP or other approved test performed on a herd sample taken not later than 15 months after the last annual certification date. If testing for recertification is not completed within 15 months after the last annual certification date, certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(4) HERD ADDITIONS. (a) Mink may be added to a certified Aleutian disease-free herd without prior testing if they originate from another certified Aleutian disease-free herd.

(b) Mink from other than a certified Aleutian disease-free herd shall be tested and found negative for Aleutian disease not more than 30 days before they are added to a certified Aleutian disease-free herd. The added mink shall be isolated from other mink in the herd, and shall be retested not less than 30 nor more than 60 days after being added to the herd.

(c) Male mink from other than a certified Aleutian disease-free herd may be added to a certified Aleutian disease-free herd without being subject to isolation, provided that the male is tested and found negative for Aleutian disease in 2 successive tests before being added to the herd. The second test shall be conducted within 30 to 60 days after the first test.

(5) SAMPLE COLLECTION AND TESTING; MONITORING BY DEPARTMENT.

(a) Department inspectors may monitor the collection of samples for certification or recertification testing under this section. Samples shall be submitted directly to an approved laboratory for testing.

(b) The department may require collection of not more than 200 blood samples from each herd at reasonable times for the purpose of random evaluation.

Ag 10.61 BRUCELLOSIS-FREE HERD; GOATS. (1) INITIAL CERTIFICATION. The department may certify a herd of goats as a "certified brucellosis-free herd" if the herd owner provides proof that all animals over 6 months of age in the herd have been found negative for brucellosis in 2 consecutive brucellosis tests. The tests shall be conducted at a state or federally approved laboratory not less than 10 nor more than 14 months apart.

(2) REVOCATION OF CERTIFICATE. The department shall, by written notice, summarily revoke a certified brucellosis-free herd certification if any goat in the herd is found positive for brucellosis in any test approved by the department. A revocation notice shall be issued by the state veterinarian, and shall be served on the herd owner or agent. A person adversely affected by a revocation notice may request a hearing before the department, but a request for hearing does not stay the revocation notice.

(3) ANNUAL RECERTIFICATION. The department may annually recertify a herd of goats as a certified brucellosis-free herd if the herd owner provides proof that all animals in the herd over 6 months of age have been found negative for brucellosis in an approved test performed on a herd sample taken not later than 14 months after the last annual certification date. If testing for recertification is not completed within 14 months after the last annual certification date, certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(4) STATUS OF INDIVIDUAL ANIMALS. No goat qualifies as a member of a certified brucellosis-free herd unless both of the following apply:

(a) The goat was born to a herd member or has been a member of the herd for at least 90 days.

(b) The goat has been tested and found negative for brucellosis in the most recent herd test, unless the goat was born since the last herd test or was under 6 months old at the time of the last herd test.

(5) HERD ADDITIONS. No goat may be added to a certified brucellosis-free herd unless one or more of the following apply:

(a) The goat originates from another certified brucellosis-free herd and was included in that herd's most recent brucellosis test.

(b) The goat originates from a brucellosis-free state.

(c) The goat tests negative for brucellosis within 30 days prior to entering the herd, and again between 60 to 120 days after entering the herd. An imported goat shall also be accompanied by an interstate health certificate or certificate of veterinary inspection under s. Ag 11.02.

Ag 10.62 TUBERCULOSIS-FREE HERD; GOATS.

(1) INITIAL CERTIFICATION. The department may certify a herd of goats as an "accredited tuberculosis-free herd" if the herd owner provides proof that all animals in the herd over 12 months of age have been found negative for tuberculosis in 2 successive tuberculosis tests. The tests shall be conducted not less than 10 months nor more than 14 months apart.

(2) REVOCATION OF CERTIFICATE. If a tuberculosis test shows that any goat in an accredited tuberculosis-free herd is infected with tuberculosis, the herd certificate shall be summarily revoked. A department veterinarian shall retest all animals showing a tuberculosis reaction within 7 days after the department receives notice of the reaction.

(3) ANNUAL RECERTIFICATION. The department may annually recertify a herd of goats as an accredited tuberculosis-free herd if all goats over 12 months of age in the herd have been found negative for tuberculosis in a tuberculosis test conducted not more than 14 months after the last annual certification date. If testing for recertification is not completed within 14 months after the last annual certification date, certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(4) STATUS OF INDIVIDUAL GOATS. No goat qualifies as a member of an accredited tuberculosis-free herd unless one or more of the following apply:

(a) The goat originated from another accredited tuberculosis-free herd.

(b) The goat was in the herd for at least 60 days prior to the last herd test.

(c) The goat was born to a herd member.

(5) HERD ADDITIONS. No goat may be added to an accredited tuberculosis-free herd unless one or more of the following apply:

(a) The goat originates from another accredited tuberculosis-free herd, and was in that herd of origin when that herd was last tested for tuberculosis.

(b) The goat originates from a herd in an accredited tuberculosis-free state.

(c) The goat originates from a herd in a modified accredited tuberculosis-free state, and that herd tested negative for tuberculosis in a herd test of all goats over 12 months of age, conducted not more than 12 months before the goat was added to the accredited tuberculosis-free herd. The goat shall also be found negative for tuberculosis in a test performed not more than 60 days before the animal is added to the accredited tuberculosis-free herd.

(d) The goat tests negative for tuberculosis within 60 days prior to entering the accredited tuberculosis-free herd, and is isolated from other goats in the herd until it tests negative for tuberculosis at least 60 days after entering the herd.

Ag 10.63 PARATUBERCULOSIS-FREE HERD; GOATS (1) INITIAL CERTIFICATION. The department may certify a herd of goats as a "paratuberculosis-free herd" if the herd owner provides proof that all goats in the herd over 12 months of age have been found negative for paratuberculosis in 3 successive paratuberculosis tests. The tests shall be conducted not less than 10 months nor more than 14 months apart. Each test shall include all goats in the herd over 12 months of age.

(2) REVOCATION OF CERTIFICATE. When any approved paratuberculosis test discloses any goats in the herd to be positive for paratuberculosis, the certificate shall be summarily revoked by written notice to the herd owner or agent. The revocation notice shall be signed by the state veterinarian. A person

adversely affected by a revocation notice may request a hearing before the department, but a request for hearing does not stay the revocation notice. If certification is revoked, the herd may not be recertified except under sub. (1).

(3) ANNUAL RECERTIFICATION. (a) The department may annually recertify a herd of goats as a paratuberculosis-free herd if all goats in the herd over 12 months of age test negative for paratuberculosis within 14 months after the last annual certification date. If testing for recertification is not completed within 14 months after the last annual certification date, certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(4) STATUS OF INDIVIDUAL ANIMALS. No goat qualifies as a member of a paratuberculosis-free herd unless one or more of the following apply:

(a) The goat was included in the initial herd certification under sub. (1).

(b) The goat originates from another paratuberculosis-free herd.

(c) The goat has been in the herd for at least 300 days, and was in the herd at the time of the last herd test for paratuberculosis.

(d) The goat was born to a herd member.

(5) HERD ADDITIONS. No goat may be added to a paratuberculosis-free herd unless the addition is approved by the department. Violation of this subsection constitutes grounds for the revocation of a paratuberculosis-free herd certificate, regardless of whether the goat is infected with paratuberculosis.

Ag 10.64 BRUCELLA OVIS-FREE FLOCK; SHEEP. (1) INITIAL CERTIFICATION. The department may certify a flock of sheep as "brucella ovis-free" if the flock owner provides proof that all rams in the flock over 6 months of age have been found negative for brucella ovis in 2 successive enzyme linked immune serum assay (ELISA) tests, or other tests approved by the department. The tests shall be conducted not less than 45 days nor more than 60 days apart.

(2) REVOCATION OF CERTIFICATE. When any test of a brucella ovis-free flock discloses that any ram in the flock is positive for brucella ovis, the certificate shall be summarily revoked by written notice to the herd owner or agent. The revocation notice shall be signed by the state veterinarian. A person adversely affected by a revocation notice may request a hearing before the department, but a request for hearing does not stay the revocation notice. If certification is revoked, the herd may not be recertified except under sub. (1).

(3) HANDLING REACTORS. If any brucella-ovis reactors are disclosed in a flock, all reactors shall be segregated, quarantined and castrated under supervision of the department, or sent to slaughter under a permit issued by the department or an accredited veterinarian.

(4) ANNUAL RECERTIFICATION. The department may annually recertify a flock of sheep as a brucella ovis-free flock if all rams in the flock test negative for brucella ovis not more than 14 months after the last annual certification date. If testing for recertification is not completed within 14 months after the last

annual certification date, certification expires. If certification expires, the herd may not be recertified except under sub. (1).

(5) STATUS OF INDIVIDUAL ANIMALS. No ram qualifies as a member of a brucella ovis-free flock unless one or more of the following apply:

- (a) The ram was included in the initial certification under sub. (1).
- (b) The ram originates from another brucella ovis-free flock.
- (c) The ram has been in the flock for at least 60 days, and was in the flock at the time of the last flock test for brucella ovis.
- (d) The ram was born to a flock member.

(6) FLOCK ADDITIONS. No ram may be added to a brucella ovis-free flock unless one or both of the following apply:

- (a) The ram originates from another brucella ovis-free flock, and was included in the last flock test of that flock.
- (b) The ram tests negative for brucella ovis within 30 days before entering the brucella ovis-free flock, and again within 45 to 60 days after entering the flock.

SUBCHAPTER VIII
ENFORCEMENT

Ag 10.70 QUARANTINES. (1) SUMMARY ACTION. The department may summarily issue quarantine orders to control contagious, infectious or communicable diseases which may affect domestic or exotic animals in this state. No person may remove any animal from premises under quarantine or fail to comply with the terms and conditions of a quarantine order.

(2) SERVICE OF NOTICE. A quarantine order under this section shall be is served upon a person having custody or control of the quarantined animals, or shall be posted on the premises affected by the quarantine order. A quarantine order may be served by any of the following methods:

(a) Personal service.

(b) Certified mail.

(c) Posting a copy of the order at 2 conspicuous places on the premises affected by the quarantine.

(3) PROOF OF SERVICE. Service of a quarantine order may be proved by affidavit or by certified mail return receipt.

(4) CONTENTS OF ORDER. A quarantine order shall contain the following information:

(a) The name and address of a person having custody or control of the quarantined animals, if known.

(b) A description of the animals affected by the quarantine.

(c) A description of the premises affected by the quarantine.

(d) The reason or justification for the quarantine.

(e) All terms and conditions applicable to the quarantine.

(f) Notice that persons adversely affected by the quarantine may request a hearing to review the quarantine order.

(5) DURATION OF QUARANTINE. A quarantine remains in effect until a written notice of release is issued by the department, unless the quarantine is set aside after review under sub. (6).

(6) REVIEW OF QUARANTINE. A person adversely affected by a quarantine may, within 30 days after the quarantine order is

issued, request a hearing before the department to review the quarantine. The department shall conduct an informal hearing as soon as reasonably possible, and not later than 10 days after receiving a request for hearing. If the matter is not resolved after informal hearing, the person requesting the hearing may seek a formal hearing under ch. 227, Stats. A request for hearing does not stay a quarantine order.

Ag 10.71 DESTRUCTION OR REMOVAL OR ANIMALS ILLEGALLY

IMPORTED. (1) SUMMARY ACTION. The department may summarily order the destruction or removal from this state of any animal imported into this state if either of the following applies:

(a) The owner or custodian of the animal fails to produce a valid certificate of veterinary inspection or interstate health certificate, if a certificate is required.

(b) The animal is imported in violation of ch. Ag 11, or in violation of any permit condition under ch. Ag 11.

(2) SERVICE OF NOTICE. An order under sub. (1) shall be served upon a person having custody or control of the animal affected by the order. The order may be served in person or by certified mail. Service may be proved by affidavit or by certified mail return receipt.

(3) CONTENTS OF ORDER. An order under sub. (1) shall contain all of the following information:

(a) The name and address of the person having custody or control of the animals, if known.

(b) A description of the animals affected by the order.

(c) The reason or justification for the order.

(d) A reasonable deadline for compliance with the order.

(e) Notice that persons adversely affected by the order may request a hearing to review the order.

(4) REVIEW OF ORDER. A person adversely affected by an order under sub. (1) may, within 30 days after receiving the order, request a hearing before the department to review the order. If a hearing is requested, the department shall conduct an informal hearing as soon as reasonably possible, and not later than 10 days after receiving the request for hearing. If the matter is not resolved after informal hearing, the person requesting the hearing may seek a formal hearing before the department under ch. 227, Stats. A request for hearing under this subsection does not postpone the deadline for compliance with the order unless the deadline is postponed by further order of the department.

Ag 10.72 PROHIBITED CONDUCT. (1) No person may:

(a) Fail to present an animal for any required disease test.

(b) Allow the sale, movement, or disposition of an animal before any required official test result for that animal is known.

(c) Misrepresent the disease status of any animal, or of the herd from which an animal originates.

(d) Sell or move any animal in violation of s. Ag 11.60, or in violation of a department quarantine order under s. Ag 10.70 or Ag 11.70.

(e) Remove, alter, or tamper with any form of official identification or official back tag.

(f) Import manure from slaughter plants or stock yards without first obtaining a permit from the department. The

department shall grant or deny a permit request within 5 days after the department receives a complete permit application.

(2) No veterinarian may fail to report any reportable disease to the department, as required by s. Ag 10.02.

SECTION 2. Ag 60.13(4) is amended to read:

Ag 60.13(4) Milk from a herd that is infected with mastitis and which is adulterated under ~~Ag 10.35(3)~~Ag 10.20(3) shall be discarded.

SECTION 3. EFFECTIVE DATE. The rules contained in this order shall take effect on the first day of the month following publication in the Wisconsin administrative register, as provided in s. 227.22(2) (intro.), Stats.

Dated this 12 day of OCTOBER, 1990.
