

Chapter NR 722

STANDARDS FOR SELECTING REMEDIAL ACTIONS

NR 722.01	Purpose.
NR 722.02	Applicability.
NR 722.03	Definitions.
NR 722.05	General.
NR 722.07	Identification and evaluation of remedial action options.
NR 722.09	Selection of a remedial action.

NR 722.11	Risk assessments.
NR 722.13	Remedial action options report.
NR 722.15	Department response.
NR 722.17	Department database requirements for remedial actions approved with a continuing obligation.

Note: Corrections made under s. 13.93 (2m) (b) 7., Stats., Register, February, 1997, No. 494.

NR 722.01 Purpose. The purpose of this chapter is to establish minimum standards for identifying and evaluating remedial action options and selecting remedial actions. This chapter is adopted pursuant to ss. 227.11 (2), 287.03 (1) (a), 287.05, and 289.06 (1) and (2), Stats., and ch. 292, Stats.

History: Cr. Register, April, 1995, No. 472, eff. 5-1-95; am. Register, February, 1996, No. 482, eff. 3-1-96; CR 12-023: am. Register October 2013 No. 694, eff. 11-1-13.

NR 722.02 Applicability. (1) This chapter applies to all remedial actions taken by the department under the authority of ch. 292, Stats. This chapter does not apply to immediate actions or interim actions, unless specifically noted in ch. NR 708. In this chapter, where the term “responsible parties” appears, it shall be read to include the department, where a department-funded remedial action is being taken.

(2) Unless otherwise specified elsewhere in chs. NR 700 to NR 754, this chapter applies to all remedial actions taken by responsible parties at sites, facilities or portions of a site or facility that are subject to regulation under ch. 292, Stats., regardless of whether there is direct involvement or oversight by the department, except for those sites or facilities being addressed under the dry cleaner response program.

Note: Sites being addressed under the dry cleaner response program are exempt because the comparison of remedies is accomplished through the remedial action bidding process, which requires 3 to 6 alternative bids to be compared before a remedy is selected.

(2m) This chapter applies to all remedial actions taken by persons seeking the liability exemption under s. 292.15, Stats. In this chapter, where the term “responsible party” appears, it shall be read to include the “voluntary party” where an action is being undertaken to comply with s. 292.15, Stats.

(3) In addition to being applicable to sites or facilities that are subject to regulation under ch. 292, Stats., ch. NR 722 applies to the evaluation of proposed remedial action options for solid waste facilities where remedial action is required by the department pursuant to ch. NR 508.

Note: Persons who wish to conduct response actions that will be consistent with the requirements of CERCLA and the National Contingency Plan (NCP) may request that the department enter into a contract with them pursuant to s. 292.31 or a negotiated agreement under s. 292.11 (7) (d), Stats. However, a CERCLA-quality response action will likely require compliance with additional requirements beyond those contained in chs. NR 700 to 754 in order to be consistent with CERCLA and the NCP.

(4) The department may exercise enforcement discretion on a case-by-case basis and choose to regulate a site, facility or a portion of a site or facility under only one of a number of potentially applicable statutory authorities. However, where overlapping restrictions or requirements apply, the more restrictive requirements shall control. The department shall, after receipt of a written request and appropriate ch. NR 749 fee from a responsible party, provide a letter that indicates which regulatory program or programs the department considers to be applicable to a site or facility.

Note: Sites, facilities or portions of a site or facility that are subject to regulation under ch. 292, Stats., may also be subject to regulation under other statutes, including

the solid waste statutes in ch. 289, Stats., or the hazardous waste management act, ch. 291, Stats., and the administrative rules adopted pursuant to those statutes. In addition, federal authorities such as CERCLA, RCRA, or TSCA may also apply to a site or facility or portions of a site or facility. One portion of a site or facility may be regulated under a different statutory authority than other portions of that site or facility.

History: Cr. Register, April, 1995, No. 472, eff. 5-1-95; cr. (2m), Register, February, 1996, No. 482, eff. 3-1-96; emerg. am. (1) to (3), cr. (3m), eff. 5-18-00; am. (1) to (3), cr. (3m), Register, January, 2001, No. 541, eff. 2-1-01; correction in (3) made under s. 13.93 (2m) (b) 7., Stats., Register, January, 2001, No. 541; CR 12-023: am. (1), (2), (2m), (3), r. (3m), am. (4) Register October 2013 No. 694, eff. 11-1-13.

NR 722.03 Definitions. The definitions in s. NR 700.03 apply to this chapter.

History: Cr. Register, April, 1995, No. 472, eff. 5-1-95; CR 12-023: renum. (intro.) to 722.03, r. (1), (2) Register October 2013 No. 694, eff. 11-1-13.

NR 722.05 General. (1) Responsible parties shall select an appropriate remedial action or combination of remedial actions for implementation under this chapter, unless the department makes the selection under sub. (2).

(2) The department shall select the remedial action for the following types of sites or facilities:

(a) State-lead national priority list sites.

(b) Sites or facilities being addressed under a contract with the department under s. 292.31, Stats.

(c) Department-funded response actions. For those sites or facilities where the department is responsible for selecting the appropriate remedy, significant consideration shall be given to options that provide for long-term sustainability.

(d) Sites or facilities being addressed under an administrative order issued under s. 292.11 (7) (c), Stats.

(3) The department shall document the remedial action selected for those sites or facilities listed in sub. (2) following the requirements of s. NR 722.07, at a minimum, and conduct the applicable public participation and notification activities as required in ch. NR 714.

(4) To select a remedy or combination of remedies, responsible parties shall identify, evaluate and document an appropriate range of remedial action options to address each contaminated medium in accordance with the requirements of this chapter, when one of the following happens:

(a) A site investigation report is completed in accordance with ch. NR 716.

(b) An evaluation of remedial action options is required in accordance with ch. NR 508.

(5) The identification, evaluation and documentation of an appropriate set of remedial action options, to address each medium and migration or exposure pathway shall be based on the complexity of the site or facility and the legal requirements applicable to the response action and the site or facility.

Note: Each remedial action option identified may be used to address more than one contaminated medium or migration or exposure pathway if that remedial action option would be protective of public health, safety and welfare and the environment for each media and migration or exposure pathway that it is proposed to address.

(6) The evaluation and documentation of an appropriate set of remedial action options shall be conducted by a qualified person or persons pursuant to s. NR 712.07 and shall be signed and sealed

by the qualified person or persons in accordance with s. NR 712.09.

History: Cr. Register, April, 1995, No. 472, eff. 5-1-95; CR 12-023: am. (2) (b), (c), (4) Register October 2013 No. 694, eff. 11-1-13.

NR 722.07 Identification and evaluation of remedial action options. (1) **GENERAL.** Unless otherwise directed by the department, responsible parties shall identify and evaluate an appropriate range of remedial action options in accordance with the requirements of this section.

(2) **IDENTIFICATION OF LIKELY REMEDIAL ACTION OPTIONS.** An initial screening of remedial technologies shall be conducted to identify remedial action options for further evaluation which are reasonably likely to be feasible for a site or facility, based on the hazardous substances present, media contaminated and site characteristics, and to comply with the requirements of s. NR 722.09.

(3) **EVALUATION OF REMEDIAL ACTION OPTIONS.** (a) Except as provided in par. (b), responsible parties shall use all of the criteria in sub. (4) to further evaluate appropriate remedial action options that have been identified for further evaluation under sub. (2), for each contaminated medium or migration or exposure pathway. This evaluation process shall be used to determine which remedial action option constitutes the most appropriate technology or combination of technologies to restore the environment, to the extent practicable, within a reasonable period of time and to minimize the harmful effects of the contamination to the air, land, or waters of the state, to address the exposure pathways of concern, and effectively and efficiently address the source of the contamination.

Note: The purpose of the technical and economic feasibility evaluation is to evaluate a range of remedial action options suitable for a particular site or facility to determine the practicability of implementing those options. If a particular option is not suitable for a particular site or facility, such as in situ air sparging in dense clay soils, it should not be evaluated. Emphasis should be placed on remedial action options suitable for a particular site or facility. Any remedy selected should attempt to limit secondary impacts including air and water discharges, destruction of ecosystems, and excessive use of energy.

Note: For cases involving a discharge and migration of organic contaminants that do not readily degrade in soil or groundwater, an active remedial action that will reduce the contaminant mass and concentration will typically be necessary. Natural attenuation, covers, and barriers do not actively reduce contaminant mass and concentrations. Chlorinated compounds are the most common contaminants that fall under this provision. Some organic contaminants, such as PCBs and PAHs may not readily migrate, depending on site characteristics.

(am) Responsible parties shall document their evaluation of a remedial option or combination of options which would use recycling or treatment technologies that destroy or detoxify contaminants, rather than transfer the contaminants to other media.

(b) A detailed evaluation based on the criteria in sub. (4) is not required in those cases where a remedial action option identified during the initial screening results in the reuse, recycling, destruction, detoxification, treatment, or any combination thereof of the hazardous substances present at the site and this proposed option meets all of the following requirements:

1m. Is proven to be effective in remediating the types of hazardous substances present at the site, based on experience gained at other sites with similar site characteristics and conditions;

2m. Can be implemented in a manner that will not pose a significant risk of harm to human health, safety, or welfare or the environment; and

3. Is likely to result in the reduction or control, or both, of the hazardous substances present at the site to a degree and in a manner that is in compliance with the requirements of s. NR 722.09 (2) to (4).

Note: Section NR 722.07 (3) (b) is intended to provide a streamlined evaluation process for certain remedial actions that are presumed to meet the evaluation and selection criteria in ss. NR 722.07 and 722.09.

(4) **EVALUATION CRITERIA.** Except as provided in s. NR 722.07 (3) (b), the remedial action options identified by the initial screening shall be evaluated based on the following requirements and in compliance with the requirements of s. NR 722.09.

(a) **Technical feasibility.** The technical feasibility of each appropriate remedial action option that effectively and efficiently addresses the sources of contamination shall be evaluated using the following criteria:

1. 'Long-term effectiveness.' The long-term effectiveness of appropriate remedial action options, taking into account all of the following:

a. The degree to which the toxicity, mobility and volume of the contamination is expected to be reduced.

b. The degree to which a remedial action option, if implemented, will protect public health, safety, and welfare and the environment over time.

2. 'Short-term effectiveness.' The short-term effectiveness of appropriate remedial action options, taking into account any adverse impacts on public health, safety, or welfare or the environment that may be posed during the construction and implementation period until case closure under ch. NR 726.

3. 'Implementability.' The implementability of appropriate remedial action options, taking into account all of the following:

a. The technical feasibility of constructing and implementing the remedial action option at the site or facility given the type of contaminants and hydrogeologic conditions present.

b. The availability of materials, equipment, technologies, and services needed to conduct the remedial action option taking into account the location and environmental impact of the selected materials and equipment.

c. The potential difficulties and constraints associated with on-site construction or off-site disposal and treatment.

Note: For example, evaluate the use of heavy equipment and cost of fuel to transport wastewater and leachate from a site compared to on-site treatment.

d. The difficulties associated with monitoring the effectiveness of the remedial action option.

e. The administrative feasibility of the remedial action option, including activities and time needed to obtain any necessary licenses, permits or approvals.

f. The presence of any federal or state, threatened or endangered species.

g. The technical feasibility of recycling, treatment, engineering controls or disposal.

h. The technical feasibility of naturally occurring biodegradation at the site or facility, if responsible parties evaluate this option.

i. The redevelopment potential of the site once the remedy has been implemented.

j. Reduction of greenhouse gases consistent with federal or state climate action policies.

4. 'Restoration time frame.' The expected time frame needed to achieve the necessary restoration, taking into account all of the following qualitative criteria:

a. Proximity of contamination to receptors.

b. Presence of sensitive receptors.

c. Presence of threatened or endangered species or habitats, as defined by state and federal law.

d. Current and potential use of the aquifer, including proximity to private and public water supplies and surface water bodies.

e. Magnitude, mobility and toxicity of the contamination.

f. Geologic and hydrogeologic conditions.

g. Effectiveness, reliability, and enforceability of continuing obligations.

h. Naturally occurring biodegradation processes at the site or facility which are expected to reduce the total mass of contamination in an effective and timely manner and which have been demonstrated to be occurring at the site or facility, to the satisfaction of the department in the site investigation report.

i. The degradation potential of the compounds.

Note: The biogeochemical environment and the contaminant of concern are critical factors in determining degradation potential. Not all compounds readily degrade in soil or groundwater, while others, such as certain petroleum compounds have a greater degradation potential.

Note: The purpose of s. NR 722.07 (4) (a) 4. is to provide criteria to determine how quickly environmental laws and standards must be achieved, due to the site-specific hazards that the contamination poses. It is not intended to authorize risk assessments, nor is it the intent of this provision to establish a generic time period that would be applied at all sites or facilities.

(b) *Economic feasibility.* The economic feasibility of each appropriate remedial action option that effectively and efficiently addresses the source of the contamination shall be evaluated, using the following criteria:

- 1m. Capital costs, including both direct and indirect costs;
- 2m. Initial costs, including design and testing costs;
3. Annual operation and maintenance costs;
4. Total present worth of the costs for all national priority list sites or facilities; sites or facilities where the department has entered into a contract pursuant to s. 292.31 (1) (b), Stats.; and sites or facilities where state environmental fund monies are being expended; and
5. Costs associated with potential future liability.

(5) **ADDITIONAL REQUIREMENTS.** (a) *Engineering controls.* If engineering controls are considered, responsible parties shall, at a minimum, evaluate an on-site engineering control to address all hazardous substances, contaminated media and migration or exposure pathways.

Note: Engineering controls include on-site or off-site containment methods, such as covers, soil covers, engineered structures, liners, gas collection systems, armoring of sediments, erosion controls, vapor mitigation systems, and groundwater slurry walls. Restricting access to a site or facility, such as constructing a fence, is not an engineering control.

(b) *Continuing Obligations.* Responsible parties shall consider the appropriateness of using continuing obligations to ensure that adequate protection of public health, safety, and welfare and the environment is maintained over time.

(c) *Additional requirements.* Responsible parties shall comply with additional site-specific remedial action evaluation or documentation requirements that may be specified by the department due to the complexity of the site or facility, the persistence of certain compounds, or the severity of the potential or actual public health or environmental impacts.

History: Cr. Register, April, 1995, No. 472, eff. 5-1-95; CR 12-023: am. (3) (a), cr. (3) (am), am. (b) (intro.), r. (3) (b) 1., 2., renum. (3) (b) 2. a. to c. to (3) (b) 1m, 2., 3. and am. (3) (b) 3., am. (4) (a) (intro.), 3. a., b., cr. (4) (a) 3. i., j., am. (4) (a) 4. d., g., cr. (4) (a) 4. i., am. (4) (b) (intro.), r. (4) (b) 1., renum. (4) (b) 1. a. to e. to (4) (b) 1m., 2m., 3., 4., 5. and am. (4) (b) 4., r. (4) (b) 2., am. (5) (b), (c) Register October 2013 No. 694, eff. 11-1-13.

NR 722.09 Selection of a remedial action. (1) GENERAL. An option from the range of technically feasible options shall be selected based on the results of the evaluation conducted pursuant to s. NR 722.07, in compliance with this section. If an option's cost, including all the costs listed in s. NR 722.07 (4) (b), is excessive with respect to what is being technically achieved by the option relative to other available options, responsible parties may choose not to select it.

(2) **ENVIRONMENTAL LAWS AND STANDARDS.** Responsible parties shall select a remedial action or combination of remedial actions that achieve restoration of the environment to the extent practicable, minimize the harmful effects from the contamination on the air, lands and waters of the state and comply with all applicable state and federal public health and environmental laws and environmental standards. Environmental laws and standards include:

(a) *Soils.* Contaminated soil shall be restored in compliance with the requirements of ch. NR 720.

Note: Chapter NR 720 provides for residual contaminant levels or performance standards. If residual contaminant levels are used instead of performance standards they must be determined in accordance with the requirements set forth in ch. NR 720. A performance standard maintains a condition that is protective of human health, safety and welfare and the environment. Use of a performance standard will involve land use restrictions, maintenance agreements, long-term monitoring or a combination of these.

(b) *Groundwater.* Contaminated groundwater shall be restored in accordance with all of the following requirements:

1. For substances that are listed in ch. NR 140, the groundwater restoration goal is the preventive action limit. The preventive action limits shall be achieved to the extent technically and economically feasible, pursuant to ss. NR 140.24 and 140.26, unless a PAL exemption is granted pursuant to s. NR 140.28.

2. For substances which do not have an established standard in ch. NR 140, the department may take or require the responsible parties to conduct any necessary actions, such as developing site-specific environmental standards in cooperation with the department of health services, to protect public health, safety, or welfare or to prevent a significant damaging effect on groundwater or surface water quality for present or future consumptive or non-consumptive uses.

(c) *Surface water and wetlands.* 1. Discharges to surface waters or wetlands may not result in a surface water quality standard contained in chs. NR 102 to 106 being exceeded and may not exceed effluent limitations established by the department based on "best available control technology currently available" or, where appropriate, "best available control technology economically achievable," in accordance with ch. NR 220.

2. For substances that do not have established criteria in ss. NR 102.14 and 105.05 to 105.09, discharges to surface waters or wetlands may not exceed site-specific water quality criteria established by the department pursuant to the general standards of ss. NR 102.04 (1) (d) and 103.03 (2) (d).

Note: The water quality standards contained in chs. NR 102 to 106 are comprised of water quality criteria for the prevention of adverse tastes and odors in fish and drinking water (s. NR 102.14), acute and chronic toxicity to aquatic life (ss. NR 105.05 and 105.06, respectively), adverse effects to wild and domestic animals (s. NR 105.07), human threshold and cancer effects (ss. NR 105.08 and 105.09, respectively) and designated uses of the surface waters based on their classification and water quality standards and criteria for wetlands. Chapter NR 220 provides that for those point sources identified in s. NR 220.21 (1), the department shall establish effluent limitations that are achievable by the application of the "best practicable control technology currently available" or, where appropriate, the "best available control technology economically achievable", as required in s. NR 220.21 (2).

3. At sites or facilities in, or in close proximity to, surface water bodies or wetlands, active remedial actions shall be taken to prevent or minimize, to the extent practicable, potential and actual hazardous substance discharges and environmental pollution that may attain or exceed surface water or wetland criteria established in accordance with chs. NR 102 to 106.

(d) *Discharges to the air.* All emissions to the air shall comply with applicable requirements in ch. 285, Stats., chs. NR 400 to 499, and any other applicable federal or state environmental laws. In addition, for those sites or facilities where a discharge of volatile hazardous substances has occurred, the vapor intrusion pathway shall be evaluated to determine the likelihood of those substances entering the breathing space of a structure. Air contaminated from vapor intrusion shall be restored in accordance with the following requirements:

1. At sites or facilities where vapors have migrated from the source of contamination, active remedial actions shall be taken to limit or prevent, to the extent practicable, potential and actual hazardous substance discharges and environmental pollution that may attain or exceed vapor action levels.

2. The department may take or require the responsible parties to conduct any necessary actions, such as developing site-specific environmental standards in cooperation with the department of health services, to protect public health, safety, or welfare or to prevent a significant damaging effect on indoor air quality for present or future use.

(e) *Hazardous and solid waste.* 1. Any waste, debris or waste stream generated by the remedial action shall be managed in compliance with all applicable state and federal laws and regulations. Contaminated debris, at a minimum, shall be addressed to minimize the harmful effects to protect health, safety, and welfare and the environment.

2. Management of materials contaminated with polychlorinated biphenyls (PCBs) shall comply with the requirements of ch. NR 157 and TSCA, if applicable.

(2m) SUSTAINABLE REMEDIAL ACTION. Once the remedial action has been selected, the responsible party shall evaluate all of the following criteria, as appropriate for the selected remedial action:

- (a) Total energy use and the potential to use renewable energy.
- (b) The generation of air pollutants, including particulate matter and greenhouse gas emissions.
- (c) Water use and the impacts to water resources.
- (d) The future land use and enhancement of ecosystems, including minimizing unnecessary soil and habitat disturbance and destruction.
- (e) Reducing, reusing, and recycling materials and wastes, including investigative or sampling wastes.
- (f) Optimizing sustainable management practices during long-term care and stewardship.

Note: Tradeoffs will exist when evaluating these criteria and responsible parties need to balance both the benefits and risks to human health and the environment when selecting and implementing the best overall approach. Additional information can be obtained from U.S. EPA at: <http://www.clu-in.org/greenremediation/>.

(3) ADDITIONAL STANDARDS OF PERFORMANCE. Each remedial action or combinations of actions shall protect public health, safety and welfare and the environment from all contaminated media, routes of exposure and contamination at the site or facility. Responsible parties shall presume that a remedial action option or combination of options is protective if it meets the criteria in sub. (2), unless the responsible party or the department determines that compliance with applicable public health and environmental laws, including environmental standards, is not protective of public health, safety, or welfare or the environment due to multiple pathways of exposure or synergistic effects of contamination. At sites or facilities where there may be synergistic effects of contamination, multiple pathways of exposure or both that pose an unacceptable threat to public health, safety or welfare or the environment, responsible parties shall attain more stringent, facility or site-specific numeric standards to ensure that public health, safety and welfare and the environment are protected. In such a situation, the department may require that the responsible parties develop a site-specific numeric or performance standard, or both, that is protective of public health, safety and welfare and the environment for the specific media, migration or exposure pathways and contamination.

(4) LANDFILL DISPOSAL OF UNTREATED CONTAMINATED UNCONSOLIDATED MATERIAL. Responsible parties may only select landfill disposal for untreated contaminated unconsolidated material if such disposal is in compliance with chs. NR 500 to 538, the landfill's approved plan of operation and both of the following requirements:

- (a) *Use of untreated contaminated unconsolidated material.* 1. Except as provided in subd. 2., untreated contaminated unconsolidated material may only be accepted by the landfill operator for use as daily cover in accordance with s. NR 514.04 (6), if the volume of untreated contaminated unconsolidated material that is proposed to be used as daily cover does not exceed the landfill's net daily cover needs nor 12.5% of the annual volume of waste received by the landfill, or for use in the construction of soil structures within the fill area when approved for that specific use by the department, unless otherwise specifically provided in the landfill's individual license and approved plan of operation.

2. Untreated contaminated unconsolidated material that is not usable as daily cover or for soil structures and for which there is no technically and economically feasible treatment alternative may be disposed of in a landfill only with prior written approval from the department, unless otherwise specifically provided in the landfill's individual license and approved plan of operation.

(b) *Volume limitations.* 1. Except as provided in subd. 2. or 3., the volume of untreated contaminated unconsolidated material from a single site or facility that is proposed for landfill disposal may not exceed 250 cubic yards as measured *in situ*.

2. Except as provided in subd. 3., volumes of untreated contaminated unconsolidated material that exceed 250 cubic yards may be disposed of in a licensed landfill with a department-approved composite liner, or a liner that is equivalent to a composite liner in terms of environmental protection as determined by the department.

3. Volumes of untreated contaminated unconsolidated material that exceed 2000 cubic yards may be disposed of in a landfill only if prior written approval is obtained from the department after the department has reviewed a remedial action options report.

Note: Material contaminated with polychlorinated biphenyls (PCBs) must be managed in accordance with the requirements of chs. NR 700 to 754. EPA has independent authority to regulate material contaminated with PCBs under TSCA. The department and EPA have entered into a memorandum of understanding that specifies how responsibility for government oversight at sites with PCB contamination will be determined. The memorandum of agreement can be found at: <http://dnr.wi.gov/files/pdf/pubs/tr/tr786.pdf>.

(5) CONTINUING OBLIGATIONS. All legal and administrative mechanisms that establish property-specific responsibilities shall be selected consistent with the provisions of ch. 292, Stats., ch. NR 726, and this chapter, and are protective of public health, safety, and welfare and the environment.

History: Cr. Register, April, 1995, No. 472, eff. 5-1-95; CR 01-129: am. (2) (a), Register July 2002 No. 559, eff. 8-1-02; correction in (4) (intro.) made under s. 13.92 (4) (b) 7., Stats., Register February 2010 No. 650; CR 12-023: am. (2) (b) 1., 2., renum. (2) (d) to (2) (d) (intro.) and am., cr. (2) (d) 1., 2., am. (2) (e) 2., cr. (2m), am. (4) (a) 1, (b) 3., r. and recr. (5) Register October 2013 No. 694, eff. 11-1-13.

NR 722.11 Risk assessments. (1) The responsible party may request, and the department may consider granting, approval to prepare and submit a risk assessment for the purpose of developing environmental standards only if the responsible parties demonstrate to the satisfaction of the department that:

- (a) Compliance with the applicable environmental standards listed in s. NR 722.09 (2) will not be protective of public health, safety and welfare and the environment; or
- (b) Attaining compliance with the applicable residual contaminant levels in ch. NR 720 is not practicable.

(2) If the department authorizes the use of a risk assessment to develop environmental standards, the responsible parties shall utilize standard exposure assumptions approved by the department. The department may approve, modify or disapprove of the risk assessment prepared by the responsible parties and shall provide a written explanation of the department's action to the responsible parties.

(3) When the department enters into a contract pursuant to s. 292.31, Stats., the department shall determine whether or not a risk assessment should be prepared and by whom.

History: Cr. Register, April, 1995, No. 472, eff. 5-1-95; CR 12-023: am. (3) Register October 2013 No. 694, eff. 11-1-13.

NR 722.13 Remedial action options report. (1) **GENERAL.** Based on the evaluation and selection of remedial action options required in ss. NR 722.07 and 722.09, responsible parties shall document the evaluation and selection in a remedial action options report in compliance with the requirements of this section. Responsible parties shall submit the remedial action options report to the department within 60 days after submitting the site investigation report, unless otherwise specified by the department.

(2) **CONTENTS OF REPORT.** The remedial action options report shall include the following:

- (a) *Cover letter.* 1. The department's identification number for the site or facility.

2. The purpose of the submittal and the desired department action or response.

3. Month, day and year of the submittal.

(b) *Executive summary.* A brief narrative summarizing the contents of the report.

(c) *Background information.* 1. Project title, name of the site or facility, its location, the mailing address and telephone number of the responsible parties, and the name, address and telephone number of the person who prepared the report.

2. The regulatory status of the site or facility.

3. A summary of the nature and extent of contamination at the site or facility, based on the data gathered during the site investigation.

4. A summary of the geologic and hydrogeologic characteristics at the site or facility, based on data gathered during the site investigation.

Note: If a site investigation report required under ch. NR 716 and a remedial action options report required under this chapter are prepared as a single submittal, the site investigation information does not need to be restated in the remedial action options portion of the combined submittal.

(d) *Remedial action options.* A brief description of each remedial action option that has been evaluated under s. NR 722.07, including all of the following information:

1. A physical and operational description of each remedial action option.

2. The degree to which each evaluated remedial action option is expected to comply with the environmental laws and standards under s. NR 722.09 (2).

3. The physical location at the site or facility where the environmental standards applicable to the site or facility and the remedial action option are to be complied with.

4. Any local, state or federal licenses, permits or approvals that are required for each remedial action option.

5. A comparison of the expected performance of each remedial action option in relation to the technical and economic feasibility criteria in s. NR 722.07 (4).

6. A statement on whether or not treatment was considered and why a treatment option or combination of treatment options were rejected, if rejected.

(e) *Selected remedial action.* Responsible parties shall document the selected remedial action in compliance with this section, except where the department is selecting the remedial action option under s. NR 722.05 (2). The remedial action options report shall identify the selected remedial action and shall include:

1. A brief summary of the rationale for choosing the remedial action, based on the evaluation required under s. NR 722.07.

2. A proposed schedule for implementing the selected remedial action option.

3. An estimate of the approximate total cost of implementing the selected remedial action option, including the costs listed in s. NR 722.07 (4) (b).

4. An estimate of the time frame needed for the selected remedial action option to comply with the applicable federal or state environmental laws and standards, whichever are more stringent.

5. A description of how the performance of the selected remedial action option will be measured.

6. A description of how treatment residuals generated in connection with the selected remedial action option will be managed on-site and, if applicable, off-site.

7. A description of how the criteria in s. NR 722.09 (2m) regarding sustainable remedial action were addressed.

NR 722.15 Department response. (1) **GENERAL.** The department may respond to the submission of a remedial action

options report required by this chapter using one of the following methods:

(a) The department may, in writing, direct responsible parties to submit all of the reports required under this chapter and to proceed to implement the selected remedial action without department approval, review or acknowledgement.

(b) The department may, in writing, direct responsible parties that review and approval of a remedial action options report is necessary prior to proceeding to implement the selected remedial action pursuant to ch. NR 724. The department shall provide written acknowledgement of receipt of each report submitted pursuant to this chapter within 30 days. Department acknowledgement shall include an estimated date for completion of department review.

(2) **DEPARTMENT REVIEW.** In cases where the department is reviewing a remedial action options report under this chapter prior to the implementation of the selected remedial action, the department:

(a) May exercise discretion on a case-by-case basis and request additional information, require revisions, approve, conditionally approve or disapprove of the report.

(b) Shall provide a written explanation of the reasons for any disapproval to the responsible parties.

(c) May establish a schedule for the responsible parties to provide additional information and revisions to the department.

(d) May approve the remedial action options report only after ensuring that implementation of the selected remedial action will adequately protect human health, safety, and the environment. In making this determination, the department shall consider the following factors as appropriate:

1. The physical and chemical characteristics of each contaminant including its toxicity, persistence, and potential for migration.

2. The hydrogeologic characteristics of the site or facility and the surrounding area.

3. The proximity, quality, and current and future uses of nearby surface water and groundwater.

4. The potential effects of residual contamination on nearby surface water and groundwater.

5. All other relevant assessments prepared and submitted in compliance with the requirements of s. NR 722.11.

6. All other relevant information contained in the remedial options report.

(e) May, as a condition of approving the remedial action, do any of the following:

1. Require operation and maintenance of an engineering control on the site.

2. Require an investigation of the extent of residual contamination and the performance of any necessary remedial action if a building or other structural impediment is removed that had prevented a complete investigation or remedial action at the site.

3. Require that the department be notified prior to a change in land use, if the proposed land use change would be such that any of the exposure assumptions on which a continuing obligation are based would no longer be protective of human health, safety, or welfare or the environment.

4. Require vapor control technologies be used for any new construction on the site, or require interim actions to limit or prevent vapor intrusion be installed, operated and maintained.

5. Require site-specific actions or continuing obligations to adequately protect human health, safety, or welfare or the environment.

6. Require the submittal of the information necessary for listing the site on the department database.

Note: In accordance with ch. NR 749, the appropriate review must accompany any request for the department to review a specific document.

(3) NOTICE TO PROCEED. Unless otherwise directed, at sites or facilities where the department approves or conditionally approves of a remedial action report, the responsible parties shall initiate the design and construction of the selected remedial action within 90 days after department approval or conditional approval.

History: Cr. Register, April, 1995, No. 472, eff. 5-1-95; CR 12-023; am. (2) (d) 1. to 5., cr. (2) (e), renum. (3) (intro.) to (3) and am., r. (3) (a), (b) Register October 2013 No. 694, eff. 11-1-13.

NR 722.17 Department database requirements for remedial actions approved with a continuing obligation.

(1) For sites or facilities where the department has approved a remedial action that includes a continuing obligation which meets any of the criteria in ss. NR 722.15 (2) (e) and 725.05 (2), the

department may require that the site or facility, including all properties and rights-of-way within the contaminated site boundaries, be included on the department database.

(2) The site or facility remedial action plan approval letter shall be associated with the site or facility record in the department database, for those sites required to be included on the department database.

(3) The fees required by ch. NR 749 shall be submitted to the department.

Note: Under s. 292.12 (3) (b), Stats., the department has authority to charge a fee for placement on a department database.

(4) Documentation requirements shall meet s. NR 726.11, to the extent practicable.
