Note: Chapter Ind 23 was renumbered to be chapter ILHR 23, Register, February, 1985, No. 350, eff. 3-1-85.

Subchapter I ---Scope

ILHR 23.01 Scope. The provisions of this chapter shall apply to the design, installation and construction of all heating, ventilating and air conditioning systems in dwellings covered by this code.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80.

Subchapter II -Design

ILHR 23.02 Design. Every dwelling shall be equipped with a heating system designed in accordance with this section. Heating equipment requirements may be waived for recreational dwellings used only during the non-heating season. Where a cooling system is provided, the cooling requirements of this section shall be met.

(1) HEATING AND COOLING SYSTEM DESIGN. Indoor and outdoor design temperatures shall be selected from s. ILHR 22.04 or 22.10. The heating and cooling systems shall be designed to maintain the indoor design temperature at outdoor design conditions. When requested, roomby-room heat loss and heat gain calculations shall be furnished.

(2) DISTRIBUTION SYSTEMS. Distribution systems shall be sized and located to satisfy the heating and cooling loads of each conditioned space. When requested, a layout of the distribution system shall be furnished to show that the system meets the requirements of this code.

(3) VENTILATION. (a) General. Mechanical ventilation systems shall be balanced. Infiltration may not be considered as make-up air for balancing purposes. All exhaust vents shall terminate outside the structure.

(b) Habitable rooms. Habitable rooms without openable windows shall be provided with a balanced mechanical epipes m

ventilation system producing one air change per hour of fresh outside air while the room is occupied.

(c) Rooms with toilets, tubs or showers. Any room with a toilet, tub or shower shall be provided with exhaust ventilation capable of exhausting 50 cubic feet per minute on an intermittent basis or 20 cubic feet per minute on a continuous basis.

Note: The department will accept designs which meet the Air Conditioning Contractors of America manual; the Mechanical Contractors Association manual; and the Sheet Metal and Air Conditioning Contractors National Association standards for heating and air conditioning systems for one- and 2-family dwellings.

(4) CONTROLS. The temperature rise through the equipment shall not exceed 100° F unless listed. Controls shall be provided to maintain the inside temperature. Where forced, warm-air systems are used, controls shall be installed to control air movement.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80; am. (1) Register, January, 1989, No. 397, eff. 2-1-89; am. (3), Register, March, 1992, No. 435, eff. 4-1-92; r. and recr. (3), Register, November, 1995, No. 479, eff. 12-1-95.

Subchapter III — **Heating Equipment**

ILHR 23.03 Selection of equipment. All heating and central cooling equipment shall be selected on the basis of airhandling capacity, pumping capacity, and thermal capacity to handle the calculated design heating or cooling load.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80.

ILHR 23.04 Types of equipment. All heat producing appliances and cooling appliances shall be listed by a testing agency acceptable to the department. The clearances from combustible materials in Tables 23.04-A and 23.04-B shall apply unless otherwise shown on listed appliances.

Note: The following agencies are acceptable to the department: The American Gas Association (AGA), Underwriter's Laboratories (UL), PFS Corporation, Warnock Hersey International, ETL Testing Laboratories, and other testing agencies approved per s. ILHR 20.18.

TABLE 23.04-A STANDARD INSTALLATION CLEARANCES (INCHES) FOR HEAT-PRODUCING APPLIANCES

¹Standard clearances may be reduced by affording protection to combustible material in accordance with Table 23.04-B.

²Rooms which are large in comparison to the size of the appliance are those having a volume equal to at least 12 times the total volume of a furnace and at least 16 times the total volume of a boiler. If the actual ceiling height of a room is greater than 8 feet, the volume of a room should be figured on the basis of a ceiling height of 8 feet.

³The minimum dimension should be that necessary for servicing the appliance including access for cleaning and normal care, tube removal, etc.

⁴For a listed oil, combination gas-oil, gas, or electric furnace this dimension may be 2 inches if the furnace limit control cannot be set higher than 250° F or this dimension may be one inch if the limit control cannot be set higher than 200° F.

⁶To combustible material or metal cabinets. If the underside of such combustible material or metal cabinet is protected with asbestos millboard at least %inch thick covered with sheet metal of not less than No. 28 gauge, the distance may be not less than 24 inches.

⁶Clearance above charging door should be not less than 48 inches.

(g)	4" insulated millboard**	36	36	36	18	18	18	12	12	9	4	4	4

* All clearances shall be measured from the outer surface of the equipment to the combustible material disregarding any intervening protection applied to the combustible material.

** A factory fabricated board formed with noncombustible materials, normally fibers, and having a thermal conductivity in the range of 1 Btu inch per square foot per °F, or less.

*** Spacers shall be of noncombustible material.

(1) FURNACES. The input and output capacity of furnaces shall be listed on the nameplate. All nameplates shall show evidence that the equipment has been listed by a recognized testing laboratory.

(a) Fuel supply. Furnaces shall be fired with the fuel for which they have been approved, except as provided in par.(d). Fuels shall be supplied to the furnace in the volume and at the pressure required on the label.

(b) Unvented furnaces and space heaters. The use of unvented furnaces and space heaters fueled by natural gas, kerosene, alcohol or other fuel shall be prohibited due to concerns about oxygen depletion; contamination from carbon monoxide, carbon dioxide, nitrogen dioxide, formaldehyde and other combustion related contaminants; and water vapor buildups.

(c) Vented wall furnaces. Vented wall furnaces shall not be equipped with duct extensions beyond the vertical and horizontal limits of the enclosure unless listed. Vented wall furnaces shall be located to prevent the restriction of air circulation by doors, projections, or other openings. Vented wall furnaces shall be provided with combustion air.

(d) Conversion burners. Conversion burners shall be listed by a recognized testing laboratory. The existing equipment shall be reconditioned and defective parts replaced before a conversion burner is installed. Conversion burners shall be installed in accordance with the installation instructions.

(e) Location. No space or water heating appliance shall be placed in a bedroom, bathroom, closet or garage unless listed for such installation. Appliances installed in garages shall have burners and burner ignition devices located at least 18 inches above the floor and be protected or located so that the furnace is not subject to physical damage from a moving vehicle.

(2) HEAT PUMP APPLIANCES. (a) Size. Heat pump appliances shall be sized to provide control of the wet and dry bulb temperatures during cooling and maximum performance during heating. The heating balance point shall be considered to determine the outdoor temperature at which the heat pump must operate 100% of the time to offset the dwelling heat loss.

(b) Auxiliary heaters. Provisions for auxiliary heat to supplement the heat pump at outdoor temperatures below the balance point shall be provided. Auxiliary heaters shall be sized so that the heat pump auxiliary will offset the dwelling heat loss down to the heating design temperature.

(3) BOILERS. Boilers shall comply with chs. ILHR 41-42, Boiler and Pressure Vessels, ss. ILHR 41.10 and 41.42 through 41.45.

Note: The department will accept equipment listed by the American Society of Mechanical Engineers, Underwriters' Laboratories, and the American Gas Association.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80; r. and recr. (1) (b), and am. (4) (b), Register, February, 1985, No. 350, eff. 3-1-85; correction in (3) made under s. 13.93 (2m) (b) 7, Stats., Register, February, 1985, No. 350; am. (intro.) and Table 23.04-A, r. (4), renum. Figures to ILHR 23.045, Register, January, 1989, No. 397, eff. 2-1-89; correction in (3) made under s. 13.93 (2m) (b) 7, Stats., Register, January, 1989, No. 897; am. (intro.) and (1) (e), r. and recr. Table 23.04-B, Register, March, 1992, No. 435, eff. 4-1-92.

ILHR 23.045 Solid-fuel-burning appliances. (1) GENERAL. Solid-fuel-burning appliances shall be installed as specified in this section unless the manufacturer or listing specifies the use of protection or clearances other than those specified in this section. All solid-fuel-burning appliances shall be tested and listed by an accepted testing agency.

Note: Factory-built fireplaces shall comply with s. ILHR 21.32.

(2) LOCATION OF APPLIANCES. (a) Servicing. Every appliance shall be located to permit access to the appliance. Sufficient clearance shall be maintained around the equipment to permit cleaning of surfaces; the replacement of air filters, blowers, motors, controls and chimney connectors; the lubrication and servicing of moving parts; and the adjustment and servicing of stokers and appliance components.

(b) Combustion air. Solid-fuel-burning appliances shall not be installed in spaces where the volume of the room (measured in cubic feet) is less than 1/10th of the maximum input BTU rating of all the appliances located in the room, unless combustion air is provided by one of the following methods:

1. Air from inside the dwelling. The openings shall be provided to the equipment enclosure. One opening shall be located within 12 inches from the floor and one opening shall be located within 24 inches from the top of the room. Each opening shall provide a minimum area of one square inch per 1,000 BTU per hour input.

2. Air from outside the dwelling. Two openings shall be provided to the equipment enclosure. One opening shall be located within 12 inches from the floor and one opening shall be located within 24 inches from the top of the room. Each opening shall provide a minimum area of one square inch per 4,000 BTU per hour input.

3. Combustion air openings. Openings required for combustion air to solid-fuel-burning appliances shall be in addition to openings required for other appliances.

Note: Wood typically has a value of 8,600 BTU per pound.

4. Location. Combustion air openings shall not be located in a confined space in which a draft diverter or draft regulator is located.

(c) Garages. Solid-fuel-burning appliances shall not be installed in a garage unless listed for such use.

(3) CHIMNEYS. (a) Solid-fuel-burning appliances shall be connected to one of the following types of chimneys:

1. Factory-built chimneys or vents. A listed residentialtype and building heating appliance chimney may be used with solid-fuel-burning appliances if the chimneys have been tested 3 times to a minimum flue gas temperature exposure of 2100°F, under the conditions specified by the listing agency, for at least 10 minutes each time.

2. Masonry chimneys. Masonry chimneys shall be constructed as specified in s. ILHR 21.30.

(b) Wood-burning equipment shall not be connected to a flue serving a fireplace or other equipment.

(c) The chimney shall be designed to create a natural draft to carry away the products of combustion or provision shall be made for mechanically maintaining constant updraft during equipment operation.

(d) A cleanout opening shall be provided.

(e) A listed, multifuel appliance may be vented into a single flue.

(4) CHIMNEY CONNECTORS. (a) All solid-fuel-burning appliances shall be connected to chimneys with factory-built chimney material, Type L vent material or steel pipe with minimum thicknesses as specified in Table 23.045-A.

TABLE 23.045-A

METAL THICKNESS FOR PIPE CONNECTORS

Diameter of Connector (inches)	Sheet Gage No.	Minimum Thickness (inches)
6 to 10	24	.023
over 10 to 16	22	.029
over 16	16	.056

(b) The required clearance to combustibles for chimney connectors shall be 18 inches. This clearance may be reduced in accordance with Table 23.045-B. The specified protection shall be applied to and cover all combustible material as specified in Figure 23.045-A.

(c) Connectors and chimneys for solid fuel-burning appliances shall be designed, located and installed to permit ready access for internal inspection and cleaning.

(d) 1. Chimney connectors shall have no more than two 90° elbows.

2. The horizontal length shall not exceed 75% of the total vertical height of the entire venting system measured from the appliance outlet.

3. The connector shall maintain a rise of at least ¼ inch per foot from the appliance outlet to the chimney inlet.

4. Connectors shall be securely supported and joints fastened with a minimum of 3 sheet metal screws or rivets.

5. Appliances used mainly for wood burning shall have the joints assembled so that the crimped end points towards the stove. Appliances burning coal shall have the joints assembled so that the crimped end points away from the appliance.

6. A connector to a masonry chimney shall extend through the wall to the innerface of the liner but not beyond.

7. The effective area of the connector shall not be less than the area of the appliance flue collar.

(e) No chimney connectors may pass through any floor, ceiling, window, door or combustible wall nor be concealed in any closet, attic or similar space. A connector may pass through a combustible wall if the connector is guarded at the point of passage by one of the following methods:

1. Metal ventilated thimble not less than 12 inches larger in diameter than the connector.

2. All combustible material in the wall is cut away from the connector a sufficient distance to provide the required 18-inch clearance. Any material used to close up such openings shall be noncombustible.

(f) A manual, cast iron damper to control draft shall be provided in the chimney connector. The damper shall not obstruct more than 80% of the connector area. Listed solid-fuel appliances whose listing prohibits the use of manual dampers in the connector shall not require a manual damper to be installed.

Register, November, 1995, No. 479

ILHR 23.045

FIGURE 23.045-A

CONSTRUCTION USING COMBUSTIBLE MATERIAL

- "A" Equals the required clearance with no protection, specified in s. ILHR 23.045 (4) (b).
- "B" Equals the reduced clearance permitted in accordance with Table 23.045-B. The wall protection should extend far enough in each direction to make 'C' equal to 'A'.

TABLE 23.045-B

CONNECTOR CLEARANCES WITH SPECIFIED FORMS OF PROTECTION1,2,3,4

Type of Protection	Minimum Required Connector Clearances (inches)
0.013 in. (28 gage) sheet metal spaced out a minimum of one inch.	9
3½ in, thick masonry wall spaced out a minimum of one inch and adequately tied to the wall being protected (see Note 4).	9
0.027 in. (22 gage) sheet metal on one-inch mineral wool batts rein- forced with wire or equivalent	_
spaced out a minimum of one inch.	3

¹ Spacers and ties shall be of noncombustible material.

- $^2\,\mathrm{All}$ methods of protection require adequate ventilation between protective material and adjacent combustible walls and ceilings.
- ³ Mineral wool batts (blanket or board) shall have a minimum density of 8 pounds per cubic foot and a minimum melting point of 1550° F.
- ⁴ If a single wall connector passes through the masonry wall there shall be at least % inch of open ventilated air space between the connector and the masonry.

(5) MOUNTING ON FLOORS. (a) Appliances shall be placed on surfaces as described in Table 23.045-C. Solid-fuelburning appliances listed specifically for installation on a floor constructed of combustible material may be installed in accordance with the terms of the listing and the manufacturer's instructions.

TABLE 23.045-C

FLOOR MOUNTINGS FOR SOLID FUEL-BURNING APPLIANCES

Kind of Appliance	Allowed Mounting
(1) All forced air and gravity fur- naces, steam and water boilers, or	Floors of fire-resistive construction with noncombustible flooring and surface finish, or fire-resistive arches or slabs. This construction may not have combustible material against the underside. Such con- struction shall extend at least 18 in- ches beyond the appliance on all sides.
(2) Residential-type ranges, water heaters, fireplace stoves, room heat- ers and combination fireplace stove/ room heaters, having less than 2 in- ches of ventilated open space be- neath the fire chamber or base of the appliance.	These appliances shall not be placed on combustible floors.
(3) Residential-type ranges, water heaters, fireplace stoves, room heat- ers and combination fireplace stove/ room heaters having legs or pedes- tals providing 2 to 6 inches of venti- lated open space beneath the fire chamber or base of the appliance.	On combustible floors when such floors are protected by 4 inches of hollow masonry, laid to provide air circulation through the masonry layer. Such masonry shall be cov- ered with 24 gage sheet metal.
	The required floor protection shall extend at least 18 inches on all sides of the appliance.
·	Noncombustible floors shall extend at least 18 inches on all sides of the appliance.
(4) Residential-type ranges, water heaters, fireplace stoves, room heat- ers and combination fireplace stove/ room heaters having legs or pedes- tals providing over 6 inches of ven- tilated open space beneath the fire chamber or base of the covered ap- pliance.	On combustible floors when such floors are protected by closely spaced masonry units of brick, con- crete or stone, which provide at least 2 inches of thickness. Such masonry shall be covered by or placed over a sheet of 24 gage sheet metal.
:	The required floor protection shall extend at least 18 inches on all sides of the appliance.
	Noncombustible floors shall extend at least 18 inches on all sides of the appliance.

(6) CLEARANCES (a) Solid-fuel-burning appliances shall be installed with clearances not less than specified in Table 23.045-D.

1. Listed appliances exception. Listed appliances shall be installed in accordance with the terms of their listing if greater clearances other than those specified by Table 23.045-D are required in accordance with the listing.

2. Clearance with protection exception. Solid-fuel-burning appliances may be installed with reduced clearances provided the combustible material is protected as described in Table 23.045-E. The specified protection shall be applied to and cover all combustible material as specified in Figure 23.045-B.

¹ Spacers and ties shall be of noncombustible material. No spacers or ties shall be used directly behind appliance or conductor.

- 2 With all clearance reduction systems using a ventilated air space, at least two sides of the protection shall be open to provide adequate air circulation. There shall be at least one inch between the clearance reduction system and combustible walls and ceilings.
- ³ Mineral wool bats, blanket or board shall have a minimum density of 8 lb. per cobic foot and have a minimum melting point of 1,500°F.
- ⁴ Insulation material used as part of a clearance reduction system shall have a thermal conductivity (k) of One (Btu) (in)/(Sq. ft.) (Hr.) (°F) or less. Insulation board shall be formed of noncombustible material.
- ⁵ If a single wall connector passes through a masonry wall used as a wall shield, there shall be at least 1/2 inch of open, ventilated space between the connector and the masonry.
- ⁶ Clearances in front of the loading door or ash removal door of the appliance shall not be reduced.

FIGURE 23.045-B

PROTECTION OF COMBUSTIBLE WALLS AND FLOORS

FRONT VIEW

Register, November, 1995, No. 479

FIGURE 23.045-B (continued)

(7) ACCESSORIES. Accessories for solid fuel-burning appliances such as heat exchangers, stove mats, floor pad and protection shields, shall be listed and shall be installed in accordance with the terms of their listing.

(8) SUPPLEMENTAL UNITS. Supplemental solid-fuelburning units connected to a furnace shall be connected to the warm air side of the furnace as illustrated in Figures 23.045-C to E.

(a) *Return air duct.* The area of the return air duct shall be at least equal to the area of the warm air supply duct. The return air duct shall be of the same material as specified for supply air ducts. Return air grilles shall not be located in bathrooms, kitchens, garages, utility spaces or in a confined space defined under s. ILHR 23.06 in which a draft diverter or draft regulator is located.

(b) *Blower*. The blower on the furnace shall maintain the manufacturer's specifications for cubic feet per minute air flow and static pressure when the supplemental unit is in operation.

(c) *Outside air intake*. The outside air intake shall be connected to the cold air return plenum of the furnace. A volume damper shall be placed in the duct for the fresh air intake.

59

ILHR 23.045

(d) *Thermostat.* The thermostat control on the supplemental heating unit shall activate the blower motor at a temperature between 100° and 120° F.

(e) Supplemental units. Supplemental solid-fuelburning units shall be installed to maintain a 3-foot clearance between the unit and the furnace or shall be installed in accordance with the listings of both the supplemental unit and the furnace if such an installation is specifically covered by the listings.

(9) SUPPLY DUCTS. Supply ducts connected to solid-fuelburning appliances shall have the following minimum clearances to combustibles:

(a) Horizontal ducts. The clearance from combustibles for horizontal ducts shall be as specified in Table 23.045-F.

TABLE 23,045-F

Distance of Ducts From Bonnet or Plenum (inches)	Clearance to Combustibles ¹ Required (inches)
0 to 36	18
over 36 to 72	6
over 72	1

¹Clearance can be reduced in accordance with Table 23.045-B

(b) Vertical ducts. 1. Air shall travel 6 feet and change directions equivalent to one 90° turn before entering an enclosure of combustible material.

2. Ducts shall have 3/16 inch clearance between the duct and any combustible material.

(10) COMBINATION APPLIANCES. Appliances capable of burning multi-types of fuel shall be listed and installed in accordance with their listing.

History: Cr. Register, February, 1985, No. 350, eff. 3-1-85; am. (1), (3) (a) 1., (4) (b), (5), (6) (a), (6) (b) 2., (8) (intro.) and (9) (a), renum. Tables 23.045-B to E to be Tables 23.045-C, D, B and F and am. B and F, Figures 23.045-C to E renum. from Figures 23.01-A to C, or. (2) (c), (3) (b) to (e) and (8) (e), Table 23.045-E and Figure 23.045-B, r. and recr. (6) (b) 1., Register, January, 1989, No. 397, eff. 2-1-89; am. (1), (2) (b) (intro.), (3) (a) 1., (8) (a) and Table A, cr. (2) (b) 4., r. and recr. Table C, Register, March, 1992, No. 435, eff. 4-1-92; am. Table C, Register, November, 1995, No. 479, eff. 12-1-95.

ILHR 23.05 Safety controls. High limit, maximum outlet air temperature and similar safety controls shall be provided on heating equipment.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80.

ILHR 23.06 Combustion air. All fuel-burning heating equipment, except sealed combustion appliances, cooking

appliances, refrigerators and clothes dryers, shall be provided with a supply of air for fuel combustion. Combustion air shall not be taken from a garage. If combustion air is taken from the attic, provisions shall be made to prevent insulation from blocking the combustion air intake and the attic vents.

(1) EQUIPMENT LOCATED IN UNCONFINED SPACES. (a) Infiltration. Combustion air may be provided by means of infiltration where the volume of the room (measured in cubic feet) in which the burner is located is greater than 1/10 of the maximum input rating of the burner(s) in Btu per hour.

(b) Openings. Where exterior openings are used to provide combustion air from the outside to appliances located in unconfined spaces, the opening shall be designed to provide one square inch of area for each 5,000 BTU per hour of input rating.

(2) EQUIPMENT LOCATED IN CONFINED SPACES. Combustion air provided to equipment located in confined spaces shall be installed in accordance with the following:

(a) Air from inside the dwelling. Two openings shall be provided to the equipment enclosure. One opening shall be located within 12 inches from the floor and one opening shall be located within 24 inches from the top of the room. Each opening shall provide a minimum area of one square inch per 1,000 BTU per hour input. The volume, in cubic feet, of the floor level to which the enclosure is vented shall not be less than 1/10 of the maximum input rating of the burner(s), in Btu per hour.

(b) Air from outside the dwelling. Two openings shall be provided to the equipment enclosure. One opening shall be located within 12 inches from the floor and one opening shall be located within 24 inches from the top of the room. Each opening shall provide a minimum area of one square inch per 4,000 BTU per hour input.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80; am. (intro.), (1) (a) and (2) (a), Register, January, 1989, No. 397, eff. 2-1-89.

Subchapter IV — Delivery Systems

ILHR 23.07 Air distribution systems. (1) SIZING. All air distribution systems shall be sized using the velocities and static pressure losses listed in Table 23.07.

TABLE 23.07

DUCT VELOCITIES

	Maximum Static Pressure		
Designation	Loss (in WG/100 ft)	Minimum Velocity (feet/minute)	Maximum Velocity (fcet/minute)
Main trunk duct	.10	700-900	800-1200
Branch duct	.10	600	700-1000
Branch riser	.10	500	650-800
Outdoor intake	.10	500	800
Grilles or openings	.10	400	600
Return air door undercuts	.10	200	300
Return air door or wall louvers	.10	200	300

WG = Water gauge per 100 feet.

Register, November, 1995, No. 479

(2) SYSTEM SIZING. The distribution system, including the evaporator coil, air filters (installed external to the heating unit), ducts, fittings, grilles and registers, shall be sized so that the total external static pressure shall not exceed the static pressure capacity of the fan at the system rated air flow.

(3) CHANGES IN DUCT SIZE. Where duct sizes are changed, the slope angle of the transition duct shall not exceed 45° .

History: Cr. Register, November, 1979, No. 287 eff. 6-1-80.

ILHR 23.08 Ductwork. (1) DUCT USE. Ducts designed for the transmission of air shall be used for no other purpose.

(2) INTERIOR DUCTS. All interior ducts shall be constructed in accordance with the following:

(a) Supply and return air ducts. Supply and return air ducts shall comply with this paragraph except that ducts attached to appliances may be constructed of materials specified in the appliance listing.

1. Kitchen exhaust ducts and ducts for air exceeding 250°F shall be constructed of sheet metal or lined with sheet metal or constructed of other noncombustible noncorrigated materials.

2. Ducts connected to furnaces shall be constructed of sheet metal for at least 6 feet from the furnace.

3. Spaces formed by unlined wood joists, studs or wood I-joists with solid webs may be used as return air ducts. Spaces used as return air ducts shall be cut off from all remaining unused portions of the space by tight-fitting stops of sheet metal or of wood joist material. Bridging shall be removed from the joist space.

(b) Under-floor plenums. An under-floor space may be used as a plenum in a single dwelling unit in accordance with this section.

1. The use of the under-floor space shall be limited to buildings not more than 2 stories in height. Except for the floor immediately above the under-floor plenum, supply ducts shall be provided extending from the plenum to registers or other floor levels.

2. The under-floor spaces shall not be used for storage, shall be cleaned of all loose scrap material and shall be tightly and substantially enclosed.

3. The enclosing material of the under-floor space, including the side wall insulation and vapor barriers, shall not be more flammable than one-inch (nominal) wood boards (flame spread classification of 200).

4. Access shall be through an opening in the floor which shall be 18 inches by 24 inches.

5. The furnace supplying warm air to the under-floor space shall be equipped with an automatic control which will start the air circulating fan when the air in the furnace bonnet reaches a temperature not higher than 150° F. Such control shall be one that cannot be set higher than 150° F.

6. The furnace supplying warm air to the under-floor space shall be equipped with an approved temperature

limit control that will limit outlet air temperature to 200° F.

7. A noncombustible receptacle shall be placed below each floor opening into the air chamber. The receptacle shall be securely suspended from the floor members and shall be not more than 18 inches below the floor opening. The area of the receptacle shall extend 3 inches beyond the opening on all sides. The perimeter of the receptacle shall have a vertical lip at least one inch high at the open sides if it is at the level of the bottom of the joist, or 3 inches high if the receptacle is suspended.

8. Floor registers shall be designed for easy removal to permit access for cleaning the receptacles.

9. Exterior walls and interior stud partitions shall be firestopped at the floor.

10. Each wall register shall be connected to the air chamber by a register box or boot.

11. A duct conforming to par. (a) shall extend from the furnace supply outlet at least 6 inches below combustible framing.

12. The entire ground surface and enclosing exterior walls of the under-floor space shall be covered with a vapor barrier having a vapor permeability rating of one perm or less and a flame spread rating of 200 or less.

13. Fuel gas lines may not be located within the underfloor space.

14. A smoke detector shall be placed in the under-floor space. The alarm and low-battery signal of the smoke detector shall be audible in the occupied areas of the dwelling, when actuated.

15. The exterior walls of the under-floor spaces shall be insulated in accordance with ss. ILHR 22.06 (1) or 22.12 (1). The insulation may not be omitted under the provisions of ss. ILHR 22.06 (2) or 22.12 (2).

16. Electrical wiring installed in the plenum shall be in conformance with the Wisconsin Administrative Electrical Code Volume 2.

(3) EXTERIOR DUCTS. (a) General. Except as provided in par. (b), ducts, which are located in garages, storage attics and similar spaces susceptible to physical damage, shall be constructed of galvanized steel or corrosion-resistive metal.

(b) *Exception*. Plastic may be used for bath fan or air-toair heat exchanger exhaust runs located in spaces outside the dwelling.

(4) UNDERGROUND DUCTS. Ducts, plenums and fittings constructed of metal encased in concrete or ceramic, or other approved materials, may be installed in the ground. Supply air ducts shall be insulated with a moistureproof material having a resistance value of at least R-5.

(5) METAL STANDARDS. All sheet metal ducts and fittings shall be constructed in compliance with standards approved by the department.

Note: The department will accept ducts designed in accordance with the ASHRAE Handbook of Fundamentals, published by the American Society of Heating, Refrigerating and Air-Conditioning Engineers, or as illustrated in the low velocity or high velocity duct construction standards published by

the Sheet Metal and Air Conditioning Contractors National Association, Inc.

(6) THICKNESS. Sheet metal ducts shall conform to the minimum thicknesses listed in Table 23.08-A.

(7) DUCT SUPPORT. Ductwork shall be fastened in place and braced to prevent lateral displacement in accordance with Table 23.08-B.

TABLE 23.08-A

DUCT CONSTRUCTION MINIMUM SHEET METAL GAUGES

TABLE 23.08-B

DUCT SUPPORT MATERIAL

Duct Type	Maximum Size of Diameter (inches)	Duct Position	Hanger or Strap Size and Spacing
Circular	10	Vertical	No. 18 gauge galvanized steel x 2" @ 12' o.c.
		Horizontal	No. 30 gauge galvanized steel x 1" or No. 18 steel wire @ 10' o.c.
	20	Vertical	No. 16 gauge galvanized steel x 2" @ 12' o.c.
	1.4	Horizontal	No. 28 gauge galvanized steel x 1" or No. 18 steel wire @ 10' o.c.
Rectangular ¹	24	Vertical	1" x 1/8" steel galvanized strap @ 12' o.c.
		Horizontal	No. 18 gauge galvanized steel x 1" @ 10' o.c.
		Vertical	1" x 1-1/8" galvanized steel angle @ 12' o.c.
	:	Horizontal	1" x 1/8" galvanized steel strap @ 10' o.c.

¹ Rectangular metal duct supports should consist of one hanger attached to one-inch wide circular bands of the duct extending around and supporting ducts exceeding 10 inches in diameter.

Note: This table does not prohibit nailing for duct support.

(8) JOINTS AND SEAMS. All joints and seams shall be securely fastened or locked. Round pipe slip joints shall be lapped at least one inch.

(9) VIBRATION CONTROL. When used, vibration isolation connectors shall be installed at the joint between the duct and fan or heating equipment. Vibration isolation connectors shall not be used where the air temperature is in excess of 250° F.

Register, November, 1995, No. 479

(10) AIR PASSAGEWAYS OF ENVELOPE DWELLINGS. The air passageways of envelope type dwellings shall comply with this subsection.

(a) No heating equipment shall be placed in the air passageways.

(b) Wood exposed to the air passageways shall be of at least 2 inches nominal thickness.

(c) Finishes and insulation exposed to the air passageway shall have a flame spread rating of 25 or less and a smoke development rating of 50 or less.

(d) A vapor barrier shall be installed on the warm side of insulation which forms a part of the thermal envelope of the dwelling. In the roof-ceiling air passageway, a vapor barrier for the insulation of the ceiling may be omitted if heated air is circulated on both sides of the ceiling insulation. The insulation on the roof side of the air passageway shall be provided with a vapor barrier on the warm side of the insulation. Any vapor barrier exposed to circulating air shall have a flame spread rating of 25 or less and a smoke development rating of 50 or less.

Note: Also see s. ILHR 21.08 (1m), Equivalent Firestopping Requirements for Envelope Dwellings.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80; cr. (2) (b) and (10), Register, January, 1989, No. 397, eff. 2-1-89; r. and recr. (2) (a), am. (3) and (6), Register, March, 1992, No. 435, eff. 4-1-92; am. (2) (a) 3., (2) (b) 15., (3) (a), and (4), Register, November, 1995, No. 479, eff. 12-1-95.

ILHR 23.09 Dampers, registers and grilles. (1) VOLUME AND BACKDRAFT DAMPERS. Volume duct dampers shall be provided to permit balancing of the system. No supply ducts shall terminate in a garage without a backdraft damper.

(2) AIR REGISTERS AND GRILLES. (a) Supply air registers. All supply air outlets shall be provided with registers or devices which will provide a uniform distribution of air.

(b) *Return air grilles*. Return air grilles shall not be located in bathrooms, kitchens, garages, utility spaces or a confined space in which a draft diverter or draft regulator is located. All other habitable spaces shall have permanent openings to a return air grille equal in area to the supply outlet serving those areas. At least one return air opening shall be provided for each floor.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80.

ILHR 23.10 Piping. (1) Pipe Sizes AND ARRANGEMENT. All steam and hot water supply and return piping, air-line piping and auxiliary equipment shall be of appropriate sizes, elevations and arrangements to accomplish the calculated results without stress or other detriment.

Note: The sizes of pipe to be used for mains and risers may be selected from the ASHRAE Guide and Data Book, published by the American Society of Heating, Refrigerating and Air Conditioning Engineers; or the manuals published by the Institute of Boiler and Radiator Manufacturers or the Mechanical Contractors Association of America.

(2) EXPANSION AND CONTRACTION. The piping for the heating system shall be equipped with anchors, expansion swings or joints, supports and similar devices to relieve stress and strain caused by temperature change of the pipe material.

(3) PIPE INSULATION. Unguarded steam, hot water supply and return piping shall be covered with insulating

material where the pipes pass through occupied areas and the surface temperature exceeds 180° F.

(4) STEAM AND HOT WATER PIPES. No pipe carrying hot water or steam at a surface temperature exceeding 250° F shall be placed within one inch of any combustible material, pass through a combustible floor, ceiling or partition unless the pipe is protected by a metal sleeve one inch larger in diameter than the pipe or with approved pipe covering.

(5) BALANCING. Balancing cocks shall be provided in each circuit of a hot water distribution system.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80.

Subchapter V — Chimneys and Vents

ILHR 23.11 General requirements. (1) TYPES OF CHIMNEYS AND VENTS. All heating appliances using solid, liquid or gas fuels shall be vented to the outside by an all-fuel factory-built, masonry chimney or other listed venting system designed to remove the products of combustion.

(2) TERMINATION. (a) Chimneys. All listed factory manufactured chimneys depending on a principle of gravity for the removal of the products of combustion shall terminate at the location specified in the product listing. For masonry chimneys or where termination location is not specified as a part of the listing, the chimney shall extend at least 3 feet above the highest point where the chimney passes through the roof of the building, and at least 2 feet higher than any ridge, peak, wall, or roof within 10 feet horizontally of the chimney.

(b) Vents. Gas and oil appliance vents shall terminate in locations specified in their listings.

(3) SIZING. Vents for new or replacement equipment shall be sized to adequately exhaust combustion products from the dwelling.

Note: The department recommends vent sizing in accordance with NFPA 54, National Fuel Gas Code or its appendix.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80; renum. (intro) to (2) to be (1) to (3) and am. (1), Register, February, 1985, No. 350, eff. 3-1-85; r. (3), Register, January, 1989, No. 397, eff. 2-1-89; am. (2), Register, March, 1992, No. 435, eff. 4-1-92; cr. (3), Register, November, 1995, No. 479, eff. 12-1-85.

ILHR 23.12 Masonry chimneys. Masonry chimneys shall conform to the requirements of s. ILHR 21.30.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80; r. and recr. Register, February, 1985, No. 350, eff. 3-1-85; am. (8), Register, March, 1992, No. 435, eff. 4-1-92; r. and recr., November, 1995, No. 479, eff. 12-1-95.

ILHR 23.13 Factory-built chimneys or vents. Factory-built chimneys or vents shall be of an approved type.

Note: The department recognizes as approved, factory-built chimneys or vents designated as "residential type and building heating appliance," "building heating appliance," "B," "BW," and "L" types listed by Underwriters' Laboratories, Inc.

(1) RESIDENTIAL TYPE AND BUILDING HEATING APPLI-ANCE. An approved "residential type and building heating appliance" chimney may be used with liquid or gas-fired heating appliances where the flue gas temperature does not exceed 1000° F continuously, and does not exceed 1400° F for infrequent brief periods of forced firing. (2) TYPE "B". An approved type "B" gas vent may be used with a vented, recessed wall heater.

(3) TYPE "BW". An approved type "BW" gas vent may be used with a vented, recessed wall heater.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80; am. (1), Register, March, 1992, No. 435, eff. 4-1-92.

ILHR 23.14 Gas vents. (1) GENERAL. All gas-fired equipment shall be provided with vent pipes conforming with s. ILHR 23.15 (2) (e), unless the manufacturer specifies other materials.

(2) DRYER VENTING. (a) Gas-fired clothes dryers shall be provided with metal venting that terminates outside the dwelling.

(b) Where dryer vent piping is concealed, a rigid metal vent pipe conforming with s. ILHR 23.15 (2) (e) shall be used.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80; correction made under s. 13.93 (2m) (b) 7, Stats., Register, March, 1992, No. 435; r. and recr., November, 1995, No. 479, eff. 12-1-95.

ILHR 23.15 Chimney connectors, smoke pipes and stovepipes. (1) DEFINITION. Chimney connectors, smoke pipes or stovepipes are passages for conducting the products of combustion from a fuel-fired appliance to the chimney.

(2) CONSTRUCTION AND INSTALLATION. The construction and installation of chimney connectors of solid-fuel-burning appliances shall comply with s. ILHR 23.045 (4). The chimney connectors of all other fuel-fired appliances shall conform with the following requirements:

(a) *Concealed space*. No chimney connector shall pass through any outside window, door or combustible outside wall, nor be concealed in any closet, attic or similar space.

(b) Combustible partitions. Connectors for appliances shall not pass through walls or partitions constructed of combustible material unless they are guarded at the point of passage by:

1. Metal ventilated thimbles not less than 12 inches larger in diameter than the connector;

2. Metal or burned fireclay thimbles built in brickwork or other approved fireproofing materials extending not less than 8 inches beyond all sides of the thimble.

(c) Pitch and length. Chimney or vent connectors shall have no more than two 45° offsets with the vertical. The horizontal length shall not exceed 75% of the total vertical height of the total venting system measured from the appliance outlet. Chimney or vent connectors shall be pitched at least 4-inch per foot from the appliance outlet collar vent to the chimney inlet.

(d) Dampers. Automatic or manual flue dampers shall be provided in accordance with s. ILHR 22.20. When used, listed automatic dampers shall be installed in accordance with the listing.

(e) Materials and thickness. Chimney or vent connectors serving liquid fuel or gas appliances shall conform to the type of material and thickness indicated in Table 23.15-A or 23.15-B.

(f) Clearance. Single wall metal connectors shall be installed with clearance to combustibles as indicated in Ta-Register, November, 1995, No. 479

ble 23.15-C. These clearances may be reduced if the combustible material is protected in accordance with the requirements of Table 23.04-B.

¹These clearances apply except if the listing of an appliance specifies different clearance, in which case the listed clearance takes precedence.

² If listed type L venting system piping is used, the clearance may be in accordance with the venting system listing.

³ If listed type B or type L venting system piping is used, the clearance may be in accordance with the venting system listing.

⁴ The clearances from connectors to combustible materials may be reduced if the combustible material is protected in accordance with Table 23.04-B.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80; am. (2) (intro.) and (g), Tables 23.15-A and C, renum. (2) (d) to be ILHR 23.155, Register, January, 1989, No. 397, eff. 2-1-89; r. (2) (e) and (f), renum. (2) (e), (g) and (h) to be (2) (c), (e) and (f), cr. (2) (d), Register, March, 1992, No. 436, eff. 4-1-92.

ILHR 23.155 Multiple appliance venting. Two or more listed gas-or liquid-fueled appliances may be connected to Register, November, 1995, No. 479

a common gravity-type flue provided the appliances are equipped with listed primary safety controls and listed shutoff devices and comply with the following requirements.

(1) The appliances shall be located in the same story, except for engineered venting systems.

(2) The appliances shall be joined at a manifold or Ytype fitting as close to the chimney as possible, unless the connector from each appliance enters a separate chimney inlet and the inlets are offset at least 12 inches vertically or the separate inlets occur at right angles to each other.

(3) The chimney connector and chimney flue shall be sized to accommodate the total volume of flue gases. For gas-burning appliances the venting area shall be at least equal to the size of the largest vent connectors plus at least 50% of the area of the other vent connectors.

History: Renum. from ILHR 23.15 (2) (d) and am. Register, January, 1989, No. 397, eff 2-1-89; r. (2), renum. (1) (intro.), (a) to (c) to be (intro.), (1) to (3), Register, March, 1992, No. 435, eff. 4-1-92.

ILHR 23.156 Condensate drains. Provisions shall be made so that condensate from heating equipment drains into the sanitary drain system.

History: Cr. Register, January, 1989, No. 397, eff. 2-1-89.

Subchapter VI — Fuel Supply Systems

ILHR 23.16 Fuel storage. (1) LIQUEFIED PETROLEUM GAS STORAGE TANKS. All liquefied petroleum gas storage tanks shall be constructed to conform with the applicable sections of chs. ILHR 11 and 12, Liquefied Petroleum Gases and Liquefied Natural Gases.

(a) No tanks shall be located inside dwellings.

(b) Tanks shall have welded steel supports and be permanently installed on concrete pads or foundations.

(2) OLL STORAGE TANKS. (a) Except as provided in pars. (b) and (c), oil storage tanks shall be installed in accordance with ch. ILHR 10, Flammable and Combustible Liquids.

(b) The total storage capacity inside any dwelling unit shall be limited to 550 gallons in one tank, or not more than 275 gallons in each of 2 tanks cross-connected to a single burner.

(c) Oil storage tanks on the inside of any dwelling shall be located at the same level as the burner it serves.

(3) GAS PIPING SYSTEMS. Gas piping systems, extending from the point of delivery to the connection with each gasfired appliance or device, shall be installed to conform with NFPA 54, National Fuel Gas Code.

(4) SHUTOFF AND CONTROL DEVICES. (a) Any oil-fired appliance or device connected to a fuel piping system shall have an accessible, approved manual shutoff valve installed upstream of any connector.

(b) Automatic gas-burning heating appliances shall be equipped with listed devices which will shut off the gas to the pilot light and main burner(s) in the event of pilot failure.

64

(c) Liquid fuel-burning appliances shall be equipped with primary safety controls which will shut off the flow of fuel to the burner(s) in the event of ignition failure.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80; correction in (1) (intro.), made under s. 13.93 (2m) (b) 7, Stats. Register, February, 1985, No. 350, 3-1-85; r. and recr. (2), (3) and (4) (a), Register, January, 1989, No. 397, eff. 2-1-89; r. (1) (b), renum. (1) (c) to be (1) (b), am. (2), Register, March, 1992, No. 435, eff. 4-1-92.

Subchapter VII — Equipment Location and Operation

ILHR 23.17 Equipment location. (1) OUTDOOR EQUIPMENT. Outdoor equipment shall be located so as to not restrict the air flow or recirculation of air. Outdoor equipment so located as to be subject to damage shall be protected. (2) INDOOR EQUIPMENT. All indoor equipment shall be installed with a minimum of 24 inches of clearance for service.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80.

ILHR 23.18 Operation. (1) INSTRUCTIONS. Written instructions shall be provided the owner for the operation and maintenance of the system and equipment.

(2) FINAL TEST REQUIRED. The installer shall test and balance every heating, ventilating and air conditioning system.

History: Cr. Register, November, 1979, No. 287, eff. 6-1-80.
