2 of the statutes; **relating to:** requiring newborn hearing screening.

Analysis by the Legislative Reference Bureau

Under current law, the attending physician or nurse-midwife must ensure that every infant born undergoes a blood test for congenital disorders and metabolic disorders. Also under current law, hospitals must make newborn hearing screening available for all infants delivered at the hospital. The state laboratory of hygiene performs tests on the blood samples; provides necessary diagnostic services, treatment, and follow-up counseling; advises the physician of the test results; and reports positive test results to the Department of Health Services (DHS).

This bill requires the physician, nurse-midwife, or certified professional midwife who attended the birth to arrange for the infant to be tested before hospital discharge, or within 30 days of birth if the infant was not born in a hospital, to determine if the infant has hearing loss. The physician, nurse-midwife, or certified professional midwife who attended the birth must also advise the parents or legal guardian of the infant of the hearing test results. This bill also requires the state laboratory of hygiene to provide additional follow-up services and to report positive hearing screening results to DHS.

For further information see the *state and local* fiscal estimate, which will be printed as an appendix to this bill.
