

NENA Site/Structure Address Point GIS Data for 9-1-1 Work Group

Address Point Placement Scenarios

Imagine the potential confusion for emergency responders, often late at night and in a hurry, as you visualize some potential incident locations on the next pages. Current address databases do not handle these locations, only containing a mailbox number and street name.

Proposed is a site and sub-address coordinate and data scheme which better defines the following:

- *Individual Residence / Business / Subaddress*

An aerial photograph showing a cell tower site. A tall, silver lattice tower stands on a small, light-colored rectangular pad. A red dot is placed at the base of the tower. The pad is surrounded by a large, brown, tilled field. To the right of the field is a paved road, and further right is a body of water. The background is filled with bare trees.

An aerial photograph of a large cemetery. The landscape is filled with rows of green grass and numerous small, light-colored headstones. Several winding paths cut through the burial grounds. In the upper left, there are long, rectangular structures, possibly mausoleums or administrative buildings. To the right, a residential area with houses and streets is visible. At the bottom, a parking lot with several cars is situated next to a road. A yellow text box in the top right corner contains the title and a list of features. Navigation icons are visible in the top right corner of the image.
