

CATALYZING PREVENTION: **THROUGH CDR DATA COLLECTION**

SAVING LIVES BY TELLING STORIES

Technical Assistance and Training

On-site, virtual and/or recorded assistance, customized for each jurisdiction, is provided to CDR and FIMR teams.

National Fatality Review-Case Reporting System

Support the NFR-CRS which is used in 48 states and provides jurisdictions with real-time access to their fatality review data.

Resources

Training modules, webinars, written products, newsletters, list-serv, website and more.

Communication with Fatality Review Teams

Regular communication via listserv, newsletters and regional coalitions.

Connection with National Partners

Develop or enhance connections with national organizations, including federal and non-federal partners.

CDR Process

Best Practices in Reviews

National Fatality Review- Case Reporting System

A National Tool for CDR and FIMR Teams

The purpose of NFR-CRS is to systematically collect, analyze, and report comprehensive fatality review data that includes:

- Information about the fetal, infant or child and their family, supervisor at the time of the incident and person responsible (when applicable)
- Services needed, provided, or referred
- Risk and protective factors
- Findings and recommendations
- Factors affecting the quality of the review meeting

NFR-CRS Utilization

There are currently 47 states using NFR-CRS

- 47 use NFR-CRS for CDR

Each state uses NFR-CRS differently. Some have comprehensive reviews whereas others may only use NFR-CRS in one jurisdiction.

States Using NFR-CRS
for CDR

States Using NFR-CRS for
CDR and FIMR

States Not Using
NFR-CRS

Oral Presentations

12 presentations at conferences such as PrevCon, Cribs for Kids, American Academy of Pediatrics (AAP), CityMatCH, AMCHP, and the Healthy Start virtual grantee meeting.

International Presentations

3 presentations at conferences such as Australian and New Zealand CDR Conference and the International Society for the Study and Prevention of Perinatal and Infant Death

Posters and Exhibits

5 exhibits at conferences such as PrevCon, AMCHP, Safe States, Cribs for Kids, and CityMatCH

Peer Reviewed Publications

3 staff coauthored/led submissions to peer-reviewed journals

Data Collaborations

Data collaborations with organizations such as AAP, Safe Kids, school associations, and federal workgroups

**JULY 2021-JUNE 2022
DISSEMINATION**

Examples of Data and Program Reports

Youth Suicide and Mental Health

DEI in All Aspects of Fatality Review

Assist CDR teams in working to incorporate DEI into all aspects of fatality review. Team members should be willing to do the work necessary to uncover bias in review meeting discussions.

Comprehensive Funding for Suicide Reviews

Provide education on the importance of comprehensive funding for CDR. Experience with the CDC Case Registries demonstrates how a small amount of funding can positively impact fatality reviews, particularly data collection, analysis, and dissemination.

Consistent Access to Records

Improve access to records needed for review including records from: Education, child welfare, medical, mental health, law enforcement, substance use, and public health.

DSI Standards for Suicide

Create, disseminate, and provide training for a standardized death scene investigation tool for suicides.

Support for Professionals Participating in CDR

Ensure professionals have access to appropriate bereavement support, critical incident debriefing, and other needed services to mitigate the impact of fatalities.

Recommendations for Suicide Prevention

The Child Dynamic Analysis and Statistics Hub (Child DASH.) summarizes information from CDR case reviews entered in the National Fatality Review-Case Reporting System (NFR-CRS) from 47 states. The NFR-CRS collects standardized data focused on cause-specific fatalities and individual and environmental risk and protective factors. States and jurisdictions select cases for reviews in different ways. The data in the NFR-CRS are not population-level statistics. Rather, they represent detailed information from cases selected for case reviews.

Equity Statement

Fatality review teams obtain information to provide context on the death of an infant, child, or adolescent. Social factors such as geography, access to education, experience with discrimination, trauma (including historical trauma), and access to physical and behavioral healthcare can contribute to premature mortality. Residential, educational, and occupational segregation impacts access to high-quality education, employment opportunities, healthy foods and physical and behavioral health care. Combined, these structural inequities have long lasting health impacts including adverse birth outcomes, infant mortality, as well as high rates of homicide, gun violence, and motor vehicle deaths. Learn more about fatality review and health equity. <https://www.ncfrp.org/resource-tag/health-equity/>

Future Activities to Support Suicide Prevention

COLLABORATING FOR A HEALTHIER TOMORROW

Publish and Disseminate Data

- Peer reviewed publications, e.g., Suicides During the COVID-19 Pandemic
- Share data via conferences, e.g., Safe States

Create Tools

- Partner to create standardized tool
- Develop a DSI learning module
- Collaborate with federal, state, and local partners to address emerging needs
