Corporate Income/Franchise Tax

This paper provides general information regarding the Wisconsin corporate income/franchise tax. Included in the paper are a general rationale for the tax, a description of the method by which the tax is applied to corporations, and summary and comparative data about the tax.

Theoretical Rationale for the Corporate Income Tax

One theoretical rationale given for the corporate income tax is based on the view that a corporation is a legal entity with an existence of its own. A corporation can be a significant factor in economic and social decision-making, operated by professional management subject to little control by the average shareholder. Proponents of the corporate income tax believe that, as a separate entity with substantial earnings and economic power, the corporation is properly subject to a separate tax. In addition, proponents believe that, since a corporation can be viewed as a separate income earning entity, it is appropriate to tax a corporation's profits, especially when a substantial amount of the corporation's income is from the sale of goods and services to the state's residents.

Another rationale for the corporate income tax is that corporations receive benefits from their form of organization. These benefits include perpetual life, limited liability of shareholders, liquidity of ownership through marketability of shares, growth through retention of earnings, and possibilities of intercorporate affiliations. In addition, corporations derive benefits from certain governmental services which may reduce corporate costs, expand markets, and facilitate finan-

cial transactions. Proponents of the corporate income tax believe that it is reasonable that corporations pay for such benefits through the tax. However, critics argue that the general level of the corporate income tax paid is too high for the benefits received. Moreover, individual corporations receive similar benefits from their status but pay different amounts of taxes. To the extent the tax is for services provided by government, a general business tax or value-added tax would more closely relate to the cost of services that are provided.

Critics of the corporate income tax believe it depresses the overall level of business investment in the U.S. They argue that although corporations operate as distinct, decision-making units, corporations should not be subject to a distinct tax because, ultimately, corporate taxes are borne by natural persons. Since corporate profits are part of the income of shareholders, some view the corporate income tax as a tax on the income of shareholders. Under this view, the corporation has no independent taxpaying ability but should be seen as a "conduit" through which earnings pass on the way to the shareholders. Those who hold this view criticize the corporate income tax because corporate profits that are distributed are taxed twice--first at the corporate level under the corporate income tax and then under the individual income tax when they are distributed as dividends to shareholders. However, many economists believe that the corporate income tax is borne not only by shareholders but by consumers and employees as well. Regardless of the specific incidence, critics of the corporate income tax argue that it is not a tax on corporate income but rather a tax on the income of people, including shareholders, consumers, and employees.

A practical justification for the corporate

income tax is that it safeguards the individual income tax. If the corporate income tax were abolished, retained earnings would no longer be taxed and individuals could simply leave their wealth within corporations where it would be sheltered from taxes until it was withdrawn. There have been proposals to "integrate" the individual and corporate income taxes to make the income tax more efficient and equitable. However, these proposals have not been adopted on either the federal or state level and would involve substantial administrative problems if enacted.

A final rationale for the corporate income tax is that it is a significant source of revenue for the federal and state governments. Critics contend that the corporate tax is used because it is politically easier to increase taxes on corporations than to increase taxes on individuals.

Entities Subject to State Corporate Income/Franchise Tax

Wisconsin has both a corporate income tax and a corporate franchise tax. The corporate franchise tax is imposed upon corporations for the privilege of doing business or exercising their franchise in the state in a corporate capacity. The corporate franchise tax is also imposed on corporations that buy or sell lottery prizes if the winning tickets were purchased in the state. The corporate income tax is imposed upon corporations which are not subject to the franchise tax and: (1) that own property in the state; (2) that derive income from sources within the state or from activities that are attributable to the state; or (3) if their business within the state consists exclusively of foreign commerce, interstate commerce, or both. As a result, companies having any intrastate business are subject to the franchise tax while those having only interstate business here are subject to the income tax. The basic difference

between the corporate franchise and income taxes is that income from obligations of the U.S. government and its instrumentalities is subject to the franchise tax, but not the income tax. Typically, the corporate franchise tax is imposed on corporations subject to taxation in Wisconsin. Since both taxes are similar, they are jointly referred to as the corporate income/franchise tax in this paper.

In general, all corporations over which Wisconsin has taxing jurisdiction are subject to the corporate income/franchise tax. However, there are certain types of corporations that are specifically exempt. These include municipal corporations, nonprofit corporations or associations, except those subject to the unrelated business income tax, cooperatives, most credit unions, most insurance companies (Wisconsin nonlife, non-mortgage guarantee companies and the nonlife insurance business of Wisconsin life insurance companies are subject to the tax), and banks under liquidation.

The income of nonprofit cooperative sickness care associations, nonprofit service insurance corporations, and religious, educational, benevolent, and other nonprofit corporations that is derived from health maintenance organizations and limited service health organizations is subject to the tax. In addition, tax-option corporations (S corporations) generally have corporate net income attributed to their shareholders who are taxed under the individual income tax. Similarly, business enterprises such as sole proprietorships, partnerships, and limited liability companies (LLCs) that are treated as partnerships for federal income tax purposes are not subject to the state corporate income/franchise tax but, rather, the net income of the business is taxed under the individual income tax.

Jurisdictional Nexus

There are two circumstances which give Wisconsin taxing jurisdiction over corporations.

First, corporations which are created and authorized to act in a corporate capacity (incorporated) under Wisconsin law or foreign corporations which are licensed to transact business in the state are subject to the Wisconsin corporate income/franchise tax. Such firms are subject to the tax whether or not they conduct business or own property in the state. However, even though a corporation is subject to the tax, it may not have a tax liability.

Second, corporations which are organized under the laws of other states or foreign nations are generally subject to the state corporate income/franchise tax if they exercise a franchise, conduct business, or own property within the state.

Under state law and administrative rules promulgated by the Department of Revenue (DOR), certain business activities are needed for a non-Wisconsin (foreign) firm to have "nexus" in Wisconsin and be subject to the state corporate income/franchise tax. In general, a foreign corporation is considered to have nexus with the state if the corporation engages in business activity in Wisconsin. Businesses activities that would create "nexus" include if a corporation: (1) owns or leases real or tangible personal property in the state; (2) has employees or representatives that engage in usual or frequent business activity in the state; (3) maintains an office or mobile store in the state; (4) performs contracts in the state; (5) sells real estate, services, or intangibles into the state; (6) regularly solicits business to state residents; (7) holds loans secured by Wisconsin property; or (8) has an interest in an LLC that does business in the state. The statutes provide certain exemptions from the nexus provisions, such as for foreign corporations whose only business activity involves certain printing or storage services in the state. A detailed description of the business activities that create nexus can be found in Appendix 1.

Under provisions included in 2009 Wisconsin

Act 2, corporations that are members of a combined group must file a combined income/franchise tax return. For a combined group, nexus is determined for the unitary business as a whole. Therefore, if a member of a combined group has nexus with Wisconsin and that nexus is attributable to the combined group's unitary business, all members of the combined group have nexus in Wisconsin. The combined reporting requirements, which are described later in this paper, took effect for taxable years beginning on January 1, 2009.

Federal Restrictions on State Taxation of Corporations

Federal restrictions on state taxing powers are contained in the U.S. Constitution. The states have the power to levy taxes in accordance with their own laws, subject to the restrictions imposed principally by the due process clause of the 14th Amendment and the commerce clause. Under the due process clause, a minimal connection must exist between a corporation's activities and the taxing state, and the income attributed to the state for tax purposes must be rationally related to income-generating activities within the taxing state. Under the commerce clause, a state is prohibited from adopting a taxation scheme which discriminates against, or places undue burden on, interstate commerce.

In 1959 the U.S. Congress enacted Public Law 86-272, which provides that a state may not impose its income tax upon a corporation that is organized under the laws of other states and that sells tangible personal property, if the corporation's only activities in the state are:

1. Solicitation, by employees, of orders for tangible personal property which are sent out-of-state for approval or rejection. The orders must be filled from a delivery point outside the state.
2. Solicitation activity by nonemployee independent contractors conducted through their own offices or businesses located in the state.

Public Law 86-272 does not apply to corporations which are organized (incorporated) under the laws of the taxing state or a foreign nation. The law also does not apply to corporations which sell services, real property, or intangible personal property in more than one state.

Corporate Income Tax Liability

In general, a corporation determines state corporate income/franchise tax liability by computing gross or total income, subtracting deductions, apportioning the net income to the state (if necessary), adjusting for nonapportionable income and net operating losses (if applicable), applying the 7.9% state tax rate, and subtracting tax credits.

Generally, state definitions of income and deductions are referenced to federal law. For corporate income tax purposes, state provisions are referenced to the federal Internal Revenue Code (IRC) in effect on December 31, 2010, with numerous exceptions.

The components used in the calculation of corporate income/franchise tax liability are outlined in the following sections.

Total Income

Gross business income is income that is generated by a taxpayer in the active conduct of a trade or business. For tax purposes, federal total income includes gross profit, dividends, interest, rents, royalties, capital gains or losses, and other income.

Gross business income equals the net amount realized from sales (gross receipts less sales returns and allowances) minus the cost of goods sold. Cost of goods sold is an adjustment made to inventoried items to arrive at gross profit. The

adjustment measures the cost of producing inventory or the cost of producing or acquiring property or merchandise for sale or resale. In general, the cost of goods sold is determined by adding related purchases and costs to the value of inventory at the beginning of the year and subtracting the value of inventory at the year's end.

Businesses do not have to determine cost of goods sold if the sale of merchandise is not an income-producing factor for their business. In these instances, gross profits are the same as net receipts. Most businesses and professions that sell services rather than products can figure profits in this manner.

Total income also includes income other than that generated from the sales of goods and services. The amount of a distribution representing a dividend is included in total income, subject to dividends received deductions for corporate recipients. A dividend is defined as any distribution made by a corporation out of its earnings or profits to its shareholders, whether in money or in property. Generally, all interest received or credited to the taxpayer is includable in gross income. (For federal income tax purposes, interest on U.S. obligations is defined as income but interest on state and local obligations is excluded. However, interest on state and local obligations is taxable under the Wisconsin franchise tax. Also, with limited exceptions, state and local interest is taxable under the state corporate income tax.) Profit from the sale or exchange of business property and other capital assets is taxable income. Combined groups compute net capital gain/loss for the group as a whole. Such profits are taxable if they are treated either as ordinary income or capital gains/loss. Rent received from property is income. Royalties are also included in income. Finally, other types of business income such as recoveries of bad debt adjustments due to a change in accounting, refunds of taxes deducted in prior years, and recapture of certain previously-claimed deductions, are included in gross income.

Although the definitions of various forms of income are generally referenced to federal IRC provisions, Wisconsin law provides for certain modifications. Specifically, the federal exclusion for gains on certain small business stock is not provided under state law. Interest, dividends, and capital gains from the disposition of intangible assets must be subtracted from income for state tax purposes if: (1) the operations of the payer are not unitary with those of the payee; and (2) the payer and payee are not related as parent company and subsidiary or affiliate and the investment activity from which the income is received is not an integral part of a unitary business. This income is generally considered nonapportionable income. Income from transactions between members of a combined group is not included in combined returns. Wisconsin generally follows the capital loss limitations and carryovers provided under the IRC for corporations. Also, taxpayers that use accrual basis accounting could not use the installment method for taxable years beginning prior to January 1, 2013, and in certain cases this resulted a difference between the federal and Wisconsin basis of assets.

Job Creation Exclusion. 2011 Wisconsin Act 5 provides an exclusion (subtraction) from income, under the individual income and corporate income/franchise taxes for increased employment. Specifically, an exclusion from income is provided equal to \$4,000 multiplied by the increase in the number of full-time equivalent employees employed by the business in Wisconsin in the tax year for a business with gross receipts of \$5.0 million or less in the tax year. For firms with gross receipts of more than \$5.0 million, the exclusion amount is \$2,000 per new employee.

Deductions

Deductions are subtractions made from gross income in arriving at net or taxable income. In part, deductions are based on the proposition that certain components of income are not available for the taxpayer's own free use. For example, tax-

es are viewed as involuntary reductions in the amount of available income. In addition, deductions can affect taxpayer behavior and are sometimes used as incentives to encourage certain types of activities. Accelerated methods of depreciation are designed, in part, to encourage capital investment. Since the corporate income tax is a tax on business, many of the deductions allowed are, in general, related to the expenses incurred in operating a business. In order to be deductible as a business expense, an expense must be an ordinary and necessary expense of the taxpayer's trade or business, paid or incurred during the taxable year in which it is deducted, and connected with the trade or business conducted by the taxpayer.

As previously noted, definitions of deductions under the state corporate income/franchise tax are generally referenced to the federal IRC in effect on December 31, 2010. As a result, most corporate tax deductions conform with federal tax provisions. However, state law includes provisions that exclude or modify IRC definitions. Most new modifications to existing federal deductions enacted since December 31, 2010, do not apply for state corporate income/franchise purposes. The state will automatically pick up any future federal changes regarding depletion and the IRC Section 179 election to expense depreciable assets.

The following sections provide a brief description of the types of deductions that are allowed. More detailed information on corporate tax deductions is presented in Appendix 2.

Compensation of Officers and Employees. Salaries, wages, and other forms of remuneration to officers of the business are deductible expenses, with certain limitations.

Repairs. Most costs for repairs and maintenance of business property are deductible.

Taxes. Most taxes that are ordinary and necessary expenses paid or incurred in carrying on a

trade or business are deductible. Fees are generally not deductible as taxes, but may be deductible as a business expenses.

Interest. Most interest on indebtedness incurred in the operation of a trade or business is deductible.

Charitable Contributions. Charitable contributions to qualified organizations, generally subject to a limit of 10% of the corporation's taxable income, are deductible.

Depreciation. The deduction for depreciation allows taxpayers to recover, over a period of years, the cost of capital assets that have a determinable life of more than one year and that decline in value over time. The depreciable life of property differs by asset class. Intangible property may be depreciable in certain cases. Land is not depreciable.

Amortization. An annual deduction is allowed over a fixed period of time for a portion of certain capital expenses that are not ordinarily deductible, such as assets with an indefinite life or organizational and investigative expenses incurred before the taxpayer went into business.

Section 179 Election to Expense Depreciable Assets. An annual deduction is allowed for eligible property placed into service that may be deducted as an eligible business expense rather than depreciated as a capital expenditure. The deduction is limited to a maximum of \$500,000 in 2014 and \$25,000 annually thereafter.

Bad Debts. A deduction is allowed for business or nonbusiness debt that becomes worthless. Separate rules apply to business and nonbusiness debt.

Rent. Rent expenses incurred as a condition to the continued use or possession of property that is not owned by the taxpayer and is used in the taxpayer's trade or business are deductible.

Depletion. A deduction for depletion is allowed in determining the income derived from the sale of natural resources over the productive life of such resources.

Insurance. The cost of most insurance that is an ordinary and necessary expense paid or incurred in carrying on a trade or business is deductible.

Advertising. Advertising expenses that are reasonable in amount and related to the business activities in which the taxpayer is engaged are deductible.

Other Deductions. Contributions to employee retirement plans and employee benefit programs are deductible, subject to a number of limitations. In addition, ordinary and necessary business expenses related to the operation of a trade or business and not deducted elsewhere can be deducted under a general miscellaneous category.

State Adjustments to Federal Law and Adjustment for Related Entity Transactions. Although state income and deductions are primarily referenced to federal law, there are a number of modifications specified under the state corporate income/franchise tax law that must be made to reflect differences in the state treatment of certain items. In addition, certain adjustments must be made for transactions between related entities that are made primarily to avoid state taxes. These adjustments are described in detail in Appendix 2.

Allocation and Assignment of Income

For state tax purposes, specified rules and laws are used to allocate or assign income of a particular corporate taxpayer.

A corporation that conducts all of its business and owns property only in Wisconsin has all of its income subject to taxation in Wisconsin. Usually, such firms are incorporated in Wisconsin.

These types of firms are often referred to as 100% Wisconsin firms, and they compute their taxes similar to how a Wisconsin resident does under the individual income tax.

A corporation which conducts its business operations and owns property or makes sales both within and outside of the state is subject to a different corporate income tax treatment than is a 100% Wisconsin firm. When states tax the income of corporations generated by activities carried on across state lines, they are required under the due process and commerce clauses of the U.S. Constitution to tax only income that is fairly attributable to activities carried on within the state. In order to meet this constitutional obligation, Wisconsin generally employs one of three methods of assigning income to the state--separate accounting, apportionment, or specific allocation.

Separate Accounting. Under Wisconsin law, a multijurisdictional corporation must use separate accounting when the corporation's business activities in the state are not an integral part of a unitary business. Separate accounting implies that the income and expenses of each specific business function or activity of a multijurisdictional corporation can be accounted for individually and independently. The corporation must determine the income attributable to Wisconsin using separate records of the sales, cost of sales, and expenses for the Wisconsin business. Transactions that occur between in-state and out-of-state businesses must be valued at "arms-length." DOR may permit separate accounting in any case (including for unitary corporations) in which it is satisfied that the use of the method will properly reflect the income that is taxable by the state. Currently, few multijurisdictional corporations in the state use separate accounting to determine their net tax liability.

Apportionment. Under apportionment, the corporation adds its total gross income from its in-state and out-of-state unitary activities, sub-

tracts its deductions, and multiplies the amount of net income by its apportionment ratio or percentage as determined by the Wisconsin apportionment factor. The apportionment percentage is used to approximate how much of a corporation's total net income is generated by activities in Wisconsin.

Most multistate corporations, including multistate public utilities, apportion income to Wisconsin using single sales factor apportionment. Statutory provisions and administrative rules govern the definitions and sourcing of sales that are included in the sales factor. For most types of multijurisdictional corporations, the sales factor is a percentage determined by dividing the total sales or receipts of the corporation in Wisconsin by the total sales or receipts of the corporation everywhere. In general, sales of tangible personal property are considered in the state if: (1) the property is delivered or shipped to a purchaser, other than the federal government, within the state; or (2) the property is shipped from a location in Wisconsin and delivered to the federal government within the state. In addition, certain sales of personal property in states where a taxpayer has no nexus are known as "throwback sales," and include sales of property: (a) shipped from Wisconsin and delivered either to the federal government or another purchaser, and the taxpayer is not in the jurisdiction of the destination state for income tax purposes; or (b) from an office in Wisconsin to an out-of-state purchaser, that are not shipped or delivered from Wisconsin, if the taxpayer is not within the jurisdiction for income tax purposes of either the state from which the property originated or was delivered or shipped. Throwback sales are included in both the numerator and denominator of the apportionment formula.

Multistate financial organizations, including financial institutions, broker-dealers, investment advisers, investment companies, and underwriters, use an industry specific, single receipts apportionment factor. Multistate insurance compa-

nies use a single premiums apportionment factor. Professional sports clubs generally apportion income using a single sales apportionment factor, with certain modifications.

Multi-factor apportionment provisions apply to certain industries. Interstate telecommunications companies apportion income using the arithmetic average of the percentages of payroll, property, and sales in Wisconsin to total company payroll, property, and sales, respectively. Certain industries subject to an arithmetic average of industry-specific, multi-factor apportionment formulas to apportion income for Wisconsin corporate income/franchise tax purposes are shown in Exhibit 1.

Allocation of Nonapportionable Income.

Allocation of nonapportionable income traces the income to the state of its supposed source and includes the income in that state's tax base. Generally, this method of assigning income is applied to income from property with the source of the income generally following the location of the property. Many states, for example, allocate the income from real and tangible personal property, such as rents from real estate and oil and mineral royalties, to the state where the underlying property is located. Income from intangible property, such as dividends and interest, is often allocated to the taxpayer's commercial or legal domicile or to the state in which the intangible property is utilized.

Wisconsin law distinguishes nonapportionable income from apportionable income. In determining a corporation's tax liability, total corporate nonapportionable income or loss is removed from the total income of a unitary multistate corporation and the remaining income or loss is apportioned to the state. Nonapportionable income allocated to Wisconsin is then added to apportioned business income to determine Wisconsin net income.

Nonapportionable income is allocable directly to the state in which the nonbusiness property

that produced the income, gain, or loss is located. For state income/franchise tax purposes, nonapportionable income includes income, gain, or loss from: (1) the sale of nonbusiness real property or nonbusiness tangible personal property; (2) rental of nonbusiness real property or nonbusiness tangible personal property; and (3) royalties from nonbusiness real property or nonbusiness tangible personal property. Expenses that are directly related to nonapportionable rents and royalties are offset against that income. Income from lottery prizes is nonapportionable income allocable to Wisconsin if the tickets were originally purchased in Wisconsin. For combined returns, the total aggregate net nonapportionable income of each member of a combined group is included in the unitary income of the group. In addition, income, gain, or loss from intangible property that is earned by a personal holding company is nonapportionable income and is allocated to the state in which the business is incorporated.

The state statutes provide that income or loss from intangibles (interest, dividends, royalties from patents, and similar types of income) is generally apportionable business income which follows the situs of the business. However, interest, dividends, and capital gains may be exempt from state tax when the recipient and payor: (1) are not a unitary business; (2) are not related as a parent company and subsidiary or affiliates; and (3) have investment activity from which the income received is not an integral part of a unitary business or the transaction does not serve an operational function. Conversely, if the corporation has commercial or legal domicile in Wisconsin, this intangible income is treated as business income for tax purposes.

Insurance Companies

Although most insurance companies that conduct business in the state are generally exempt from the state corporate income/franchise tax and, instead, pay the state insurance premiums tax, certain types of insurance companies are sub-

Exhibit 1: Apportionment Factors Used by Certain Types of Multijurisdictional Corporations

Type of Corporation	Apportionment Factors
Interstate Telecommunications Company	<ol style="list-style-type: none"> 1. Ratio of sales in Wisconsin to total sales everywhere. 2. Ratio of property in Wisconsin to total property everywhere. (The property factor is generally the average value of real and tangible personal property owned or rented by the taxpayer.) 3. Ratio of payroll in Wisconsin to total payroll everywhere. (The payroll factor is generally the total amount of compensation paid.)
Interstate Air Carrier*	<ol style="list-style-type: none"> 1. Ratio of aircraft arrivals and departures in state to total aircraft arrivals and departures. 2. Ratio of revenue tons handled at airports in state to total revenue tons handled. 3. Ratio of originating revenue in state to total originating revenue.
Interstate Motor Carrier	<ol style="list-style-type: none"> 1. Ratio of gross receipts from carriage of persons or property, or both, first acquired for carriage in Wisconsin to total gross receipts from carriage of persons or property, or both, everywhere. 2. Ratio of revenue ton miles of carriage in Wisconsin to total revenue ton miles of carriage. (Revenue ton miles means the movement of one ton of persons or property, or both, the distance of one mile. One person equals 200 pounds.)
Interstate Railroads and Sleeping Car Companies	<ol style="list-style-type: none"> 1. Ratio of gross receipts from carriage of property, or persons, or both, first acquired for carriage in Wisconsin to total gross receipts from carriage of property, or persons, or both, everywhere. 2. Ratio of revenue ton miles of carriage in Wisconsin to revenue ton miles of carriage everywhere. (Revenue ton miles means the movement of one net ton of property or persons, or both the distance of one mile, for consideration. One person equals 150 pounds.)
Interstate Pipeline Company	<ol style="list-style-type: none"> 1. Ratio of average net cost of real and tangible property owned and used in Wisconsin to produce apportionable income to total average net cost of such property owned and used everywhere. 2. Ratio of traffic units (transportation for a distance of one mile of one barrel of oil, one gallon of gasoline, 1,000 cubic feet of natural or casinghead of gas, or other appropriate measure of product) in Wisconsin to the total traffic units everywhere. 3. Ratio of compensation paid to employees located in the state to total compensation paid to all employees to produce apportionable income.

*These apportionment factors also apply to interstate air freight forwarders affiliated with a direct air carrier

ject to the corporate franchise tax. Specifically, the state corporate income/franchise tax is imposed on most domestic nonlife insurance companies and on the nonlife insurance business of domestic life insurance companies. Insurers gen-

erally exempt from the state corporate income/franchise tax include:

1. Foreign insurance companies (companies not organized under Wisconsin law);

2. Domestic life insurance companies engaged exclusively in life insurance business. If a life insurance company engages in a business other than life insurance, the net income from the nonlife insurance business is subject to the state income/franchise tax. These companies pay the state premiums tax on their life insurance business;

3. Domestic insurers transacting mortgage guaranty insurance business;

4. Town mutual insurers organized under, or subject to, state law;

5. Insurers exempt from federal income taxation under the IRC; and

6. Certain corporations that are bona fide cooperatives operating without pecuniary profit to any shareholder or member, or operated on a cooperative plan pursuant to which they determine and distribute their proceeds in compliance with state law. However, the income of cooperative health care associations or service insurance corporations that is derived from a health maintenance organization or limited service health organization is subject to the franchise tax.

Under federal law and under state law, insurance companies, excluding life insurance companies, are generally exempt from the corporate income tax if their gross receipts for the tax year are \$600,000 or less, and the premiums received exceed 50% of gross receipts. For mutual insurance companies, gross receipts cannot exceed \$150,000 and premiums must exceed 35% of gross receipts. If net premiums do not exceed \$1.2 million, a company may elect to only have its taxable investment income taxed. Life insurance companies are subject to the state insurance premiums tax, but not the state corporate income/franchise tax.

Insurers that derive income from the sale or purchase and subsequent sale or redemption of

lottery prizes must pay state income/franchise tax on this income, if the winning ticket was purchased in Wisconsin.

When a corporation that is an insurance company determines its Wisconsin income, certain aspects of its tax liability are computed differently than for other corporations. In addition to the state adjustments to federal income made by corporations, there are further additions specific to insurance companies. Insurance companies must add the following to federal income: (1) loss carryforward, including any capital loss carryforward previously deducted for Wisconsin purposes, that was deducted in computing federal taxable income; (2) dividend income received during the tax year to the extent the dividends were deducted from, or not included in, federal taxable income; and (3) any deduction for discounting unpaid losses (customer claims). If an insurance company is a member of a combined group, these amounts must be included in the combined group's income. Insurance companies must also adjust net business losses to exclude the dividends received deduction.

Depending upon the type of insurance company involved, the adjusted federal taxable income amount might require further modifications before arriving at Wisconsin net taxable income. Domestic insurance companies not engaged in the sale of life insurance that have collected premiums written on property and risks located only in Wisconsin are not required to further modify this measure of income. For these insurance corporations, adjusted federal taxable income is Wisconsin net income before any offset for business loss carryforwards.

For domestic companies that sell both life and nonlife insurance, income from life insurance operations must be excluded from taxable income. Life insurance operations are excluded by multiplying adjusted federal taxable income by a percentage calculated by dividing the insurance company's net gain from operations other than

life insurance by that company's total net gain from operations and excluding that amount from state taxable income. Net gain from operations other than life insurance includes: (1) net income, after dividends to policyholders and before federal and foreign income taxes, from property and casualty insurance; (2) net gain from operations, after dividends to policyholders, and before federal income taxes, from accident and health insurance; and (3) net realized capital gains or losses on investments from accident and health insurance operations.

Domestic insurance corporations that have received premiums written for insurance, other than life insurance, on property and risks located both in and outside of Wisconsin must allocate a portion of total adjusted federal income to the state based on a premiums factor, which is similar to the sales factor used by other types of corporations to apportion income. The premiums factor is the ratio of direct premiums written for insurance, other than life insurance, and assumed premiums written for reinsurance, other than life insurance, with respect to property and risks resident, located, or performed in the state, divided by the total of such premiums everywhere. The apportionment ratio (premiums factor) is applied to adjusted federal income to arrive at Wisconsin net income before any offset for business loss carryforwards. As noted, combined groups use a modified sales factor in apportioning income to the state. Insurance company premiums are treated like sales in the modified factor and are included in the modified factor in apportioning the combined group's unitary income to Wisconsin. If the insurance company is a member of a combined group, the company's share of combined unitary income is apportioned to the member insurance company based on the ratio of the company's combined unitary income to the group's combined unitary income.

"Direct premiums" is defined as direct premiums reported for the tax year on the annual statement required to be filed with the Commis-

sioner of Insurance. "Assumed premiums" is defined as assumed reinsurance premiums from domestic insurance companies also reported for the tax year on the annual statement.

Under state law, the amount of tax that an insurance company pays under the state income/franchise tax cannot exceed 2% of gross Wisconsin premiums. This limitation does not apply to income from lottery prizes.

Net Business Losses

Although similar to federal law, Wisconsin has specific state provisions governing the determination and use of net business losses for corporate income/franchise tax purposes. Under state law, a net business loss is generally defined as the excess of business expenses allowed as deductions in computing net income over the amount of income attributable to the operation of a trade or business in the state. Nonapportionable losses having situs in Wisconsin are included in Wisconsin net business loss; nonapportionable income having situs in the state is included in net business income.

Net business losses are determined in a manner similar to the way taxable income is determined. The taxpayer starts with gross income and subtracts business expenses allowable as deductions. If expenses are greater than income, a net business loss is generated. Pursuant to 2013 Wisconsin Act 145, state law allows net business losses to be carried forward for 20 years. Federal law permits net business losses to be carried back for two years, but state law does not provide for carrybacks of net business losses. Certain unused business loss carryforwards generated by members of a combined group can be shared with other members of the group to offset their net income. Under state tax provisions, net business losses (if any) are used to offset state taxable income before the state tax rate is applied to net income.

State Corporate Income Tax Rate

The state corporate income tax rate is 7.9% and is applied to all income subject to the state corporate income tax. The resulting amount is the corporation's gross tax liability.

Economic Development Surcharge

Under provisions of 2011 Wisconsin Act 32, the state recycling surcharge was converted to the economic development surcharge. The economic development surcharge provides funding for economic development programs administered by the Wisconsin Economic Development Corporation (WEDC). DOR administers the surcharge.

The economic development surcharge is imposed on S corporations, C corporations, and insurers that are required to file a corporate income/franchise tax return if they have at least \$4 million in gross receipts from all activities (generally includes all sales, income, rents, and other receipts). Pursuant to 2013 Wisconsin Act 20, partnerships and individuals are exempt from the surcharge beginning in tax year 2013.

The economic development surcharge equals 3% of gross tax liability for corporations (including insurance companies), or 0.2% of net business income for S corporations. The minimum surcharge is \$25 and the maximum is \$9,800.

Corporate Income/Franchise Tax Credits

A tax credit is an amount that is subtracted from the gross income tax liability of the taxpayer in a given year. In general, a tax credit differs from a deduction in that the credit is subtracted from the tax itself, resulting in a dollar-for-dollar reduction in the gross tax liability; a deduction is subtracted from income, resulting in a reduction in the amount of income subject to tax. Some tax credits are refundable. When a refundable tax credit exceeds gross tax liability, the taxpayer may receive a payment for the excess credit

amount, or may apply all or a portion of that amount to the following year's tax liability. For the nonrefundable credits, unused amounts generally can be carried forward and claimed in future years. In addition, for some credits, unused amounts may be sold or otherwise transferred to another taxpayer.

Rather than adopting federal tax credits for state purposes, Wisconsin provides its own corporate income tax credits for certain business expenditures.

In general, partnerships, LLCs, and S corporations cannot claim the tax credits provided under the state corporate income/franchise tax, but eligibility for, and the amount of, the credit is based on the entity's payment of eligible expenses, subject to any limit on the maximum aggregate amount of credits that a single entity can claim. A partnership, LLC, or S corporation is required to compute the amount of the credit that each of its partners, members, or shareholders can claim and provide that information to them. Partners, members, and shareholders can claim the credit in proportion to their ownership interest. In addition, tax-option corporations are not eligible to receive or to distribute angel investment tax credits to their shareholders.

Many of the corporate tax credits are intended to encourage businesses to locate, expand, and hire employees in Wisconsin, and require certification by WEDC. For some of the credits, the amount that can be claimed in a year, or in the aggregate, is capped. Pursuant to 2013 Wisconsin Acts 20 and 145, fifteen credits were sunset following tax year 2013 and three credits are sunset following tax year 2014.

The following non-refundable and refundable tax credits are available under the state corporate income tax in tax year 2015. Detailed descriptions of the nonrefundable and refundable tax credits can be found in the Legislative Fiscal Bureau informational paper "Business Tax Credits."

Corporate Nonrefundable Tax Credits

Manufacturing and Agriculture Tax Credit. Equal to 7.5% of eligible production activities income from Wisconsin-based assets when fully phased in. The credit percentage is being phased in from 2013 to 2016.

Research Tax Credit. Equal to 5% or 10% of certain research expenses.

Early Stage Seed Investment Credit. Equal to 25% of investments made to a fund manager that the fund manager invests into a qualified new business venture (QNBV). Fund managers and QNBVs must be certified by WEDC.

Economic Development Tax Credit. Persons that conduct a job creation, capital investment, employee training, or corporate headquarters location or retention project are eligible to be certified by WEDC to claim various tax benefits.

Manufacturing Investment Tax Credit. Can be claimed by taxpayers that have more than \$25,000 of unused manufacturer's sales tax credits under prior law and that have maintained jobs or investments in Wisconsin.

Supplement to the Federal Historic Rehabilitation Tax Credit. Equal to 20% of qualified rehabilitation expenditures for certified historic structures and qualified rehabilitated buildings.

Community Rehabilitation Program Credit. Equal to 5% of the amount paid to a community rehabilitation program to perform work for the claimant's business, pursuant to a contract.

Kenosha and Janesville Development Opportunity Zones. WEDC is required to designate an area in the City of Kenosha, and an area in the City of Janesville as development opportunity zones that exist for five years. Any business that locates and conducts activity in the zones is eligible to claim the development zone credit or the

development zone capital investment credit.

Development Zones Credit. Equal to 50% of the amount expended for specified environmental remediation and up to \$8,000 per full-time job created or retained in a zone.

Development Zone Capital Investment Credit. Equals 3% of depreciable property purchased, or amounts spent to acquire, construct, rehabilitate, remodel, or repair real property in a zone.

Insurance Security Fund (ISF) Assessment Tax Credit. A credit may be claimed for 20% of the amount of the Wisconsin portion of assessments paid by certain insurers to the ISF. The credit can be claimed in each of five calendar years following the year in which the assessment was paid.

Corporate Refundable Tax Credits

Enterprise Zone Tax Credits. Tax benefits can be claimed by businesses that operate in enterprise zones established by WEDC based on jobs, payroll, job retention, training, capital expenditures, and purchases from Wisconsin vendors.

Jobs Tax Credit. Equals up to 10% of the wages paid to an eligible employee and/or the amount of costs incurred to undertake training activities in a tax year, as determined by WEDC.

Farmland Preservation Tax Credit. Corporate owners of eligible farmland can receive a refundable tax credit under the farmland preservation program based on the number of qualifying acres of state farmland.

Combined Reporting

Beginning in tax year 2009, corporations that are engaged in a unitary business with one or more other corporations are required to file a combined return. Specific provisions govern which corporations should file a combined return

and the manner in which combined net tax liability is determined. As noted, the combined reporting requirements were enacted in 2009 Wisconsin Act 2. Prior to that legislation, Wisconsin used separate entity reporting, under which each corporation, including a member of an affiliated group of corporations, was taxed as a separate entity. The following sections provide a general overview of state combined reporting laws.

Combined Groups. State law requires that a corporation use combined reporting if all of the following apply:

1. The corporation is a member of a commonly controlled group. A commonly controlled group generally means a group in which ownership of stock represents more than 50% of the voting power of each corporation.

2. The corporation is engaged in a unitary business with one or more other corporations in its commonly controlled group. Unitary business generally means a group of commonly controlled business entities whose operations are integrated and each company, division, or branch is dependent upon, and contributes to the operation of, the business as a whole.

3. The corporation is not excluded from the combined group under water's edge rules. In general, a company that is not organized under U.S. law whose income is generated and attributable to activity outside the U.S. is not required to be included in a combined group if the non-U.S. income represents more than 80% of its total business income. In addition, a corporation's income is not taxable under state law if that income is excluded from federal income taxes pursuant to federal treaty.

Real estate investment trusts, regulated investment companies, real estate mortgage investment conduits, financial asset securitization investment trusts, and S corporations cannot be included in a combined group and must file separate

returns. However, the income of these entities that is derived from the group's unitary business is included in the combined unitary income of the group to the extent it is included in, or distributed to, a corporation that is a group member.

Combined Unitary Income. The general process of computing a combined group's net tax liability begins with computing the combined unitary income of the group. Combined groups are required to aggregate and reconcile federal taxable income from the federal consolidated return or from federal separate returns. The group is required to make certain adjustments on the combined return related to intercompany transactions and limitations that apply to the combined group, capital losses, and charitable contributions.

Generally, intercompany transactions that are made to defer income, gain, or loss between members of a combined group are identified and excluded from the computation of unitary income in the same manner as prescribed for members of a consolidated group under federal law. Capital losses and gains are generally apportioned and shared between members of a combined group in the same manner as other income or losses. For losses to be shareable, the losses must be attributable to tax years beginning in 2009 or later and must have been originally computed for a member of the same combined group. Charitable contribution deductions are generally limited to 10% of the combined group's aggregate taxable income.

Following these adjustments, the group computes the aggregate Wisconsin addition and subtraction modifications to federal taxable income to reflect the differences between state and federal law, as is generally required of all corporations. For transactions between group members where the payer's expense and the payee's expense are included in the combined unitary income of the group, addback modifications are not required.

After aggregate additions and subtractions are made to the combined group's income, the non-apportionable and separately apportionable income (income subject to water's edge rules, lottery prizes, separate entity income/loss) of each group member is subtracted. As previously noted, these amounts are generally allocated to the state where the property that produced the income, gain, or loss is located. Amounts that are allocable or apportionable to Wisconsin are included in the group's combined unitary income, following apportionment. For combined groups, nexus is determined for the unitary group as a whole. If one member of a group has nexus with the state, then the combined group as a whole has nexus. Consequently, the unitary nonapportionable and separately apportionable income of each combined group member is included in the combined net income of the group.

The combined unitary income of the group is apportioned to Wisconsin using an aggregate sales factor. The sales factor is calculated by dividing the aggregate of each member's sales into Wisconsin by the total sales of all corporate members, excluding sales receipts between members of the combined group. For purposes of determining the amount of throwback sales apportioned to Wisconsin from combined unitary income, no member of the combined group can be within the jurisdiction of the destination state of the sale. If a pass-through entity is directly or indirectly owned by a corporation in the combined group, the ratio of that corporation's distributive share of the pass-through entity's unitary business income is included in apportioning the combined group's income.

Combined groups that only do business in Wisconsin do not apportion aggregate income. Each member's net income subject to combination is determined on a separate entity basis and then adjusted (such as excluding any non-unitary income) to reflect the member's status as a combined group member. These incomes are added together to arrive at the group's combined unitary

income.

Computation of Member's Income. After the combined group's unitary income has been apportioned to Wisconsin using the aggregate sales factor, certain member level data is computed. Specifically, each member separately: (1) determines its share of the group's tax liability, including tax attributable to separate entity items, such as non-unitary income or loss; (2) computes the member's economic development surcharge liability; (3) tracks the use of the member's net business losses and credits; and (4) shares its research tax credits with other members of the group. These accounts are also aggregated and reported on the combined return.

The combined group member's share of the group's total Wisconsin income is apportioned to each member using the percentage calculated by dividing the member's sales in Wisconsin by the group's total sales. The group's unitary combined income is then multiplied by this percentage to determine the member's combined unitary income. Each member then calculates its tax liability separately starting with its share of combined unitary income.

A corporation that is a member of a combined group can have income that is required to be apportioned separately from the group's combined unitary income. This can occur when a member has income or loss that is excluded from combined unitary income under water's edge rules. Also, separate apportionment is used in cases where a combined group member has apportionable income or loss from a separate unitary business.

Individual combined group members that have a positive income amount can offset some income with net business loss carryforwards. Combined group members may share all or a portion of their losses with other members under certain conditions. For net operating business losses incurred prior to tax year 2009, up to 5% of pre-

2009 net business losses incurred by individual members can be shared among members of a combined group for 20 years. For business loss carryforwards incurred in tax year 2009 or in later years, such losses can generally be shared among group members provided that the loss is attributable to unitary income included in a combined report for the same combined group in which the member was, and still is, a member.

After a group member offsets its income with any net business loss carryforwards, the individual corporation determines its gross tax by applying the 7.9% state corporate income/franchise tax rate to the resulting measure of income. The aggregate gross tax liability for all group members is included on the combined group's return.

The economic development surcharge is computed separately for each member of a combined group, based on the member's gross tax and gross receipts. In the same manner as determining nexus for income/franchise tax purposes, if one member of a combined group has nexus in Wisconsin for the surcharge, all members of that combined group have nexus. Consequently, the \$4 million gross receipts threshold and the surcharge amount, subject to the \$25 minimum and \$9,800 maximum surcharge limits, are computed for each combined group member. The aggregate surcharge for all group members is reported on the combined return.

Tax credits are attributes of the separate corporation rather than of the combined group, and credits are computed separately for each corporation. A combined group member's nonrefundable credits, other than research credits, including carryforwards of those credits, may only be used by that combined group member to offset tax liability on its own taxable income. Research credits may be shared under certain circumstances.

Combined Group Tax Liability. Corporate income/franchise tax liability of each group member that is computed separately must be aggregat-

ed and included on the group's combined return to determine the group's tax liability.

Refundable tax credits are computed separately for each combined group member. However, any refundable tax credits computed by each member are aggregated and used to offset the group's tax liability reported on the combined return. Any refundable amount not used is refunded to the group's designated agent.

Designated Agent. Each combined group is required to appoint a corporation as the "designated agent" for the group. The designated agent's tax year must be the same as that of the combined group. The agent acts on behalf of all members of the combined group for matters that relate to the return, such as filing the return, corresponding with DOR, remitting taxes and receiving refunds or assessments from the Department on behalf of all members of the group, and participating in any investigation or hearing DOR might hold with regards to the combined return.

Comparative Examples

Exhibits 2 and 3 provide illustrations of how, in general, the tax liability of a single multijurisdictional corporation and a combined group of corporations compute net tax liability under Wisconsin law. Exhibit 2 shows the computation for a single multijurisdictional corporation. The individual firm computes gross income, subtracts deductions, apportions income to Wisconsin using the sales factor, adjusts for nonapportionable income and net business loss carryforwards, applies the tax rate, and subtracts tax credits to determine net tax liability.

Exhibit 3 provides an illustration of how net tax liability is computed for a combined group. Aggregate federal taxable income is determined for the group. Group level adjustments are made to the aggregate federal taxable income to reflect intercompany transactions, calculate net capital gain/loss and charitable contribution limits, and

include Wisconsin additions and subtractions to federal income, including related entity adjustments, to arrive at the combined unitary income of the group. The Wisconsin share of the combined unitary income of the group is determined by applying the group's apportionment factor.

The net income and tax liability is then determined for each member. A member is allocated a portion of the group's combined Wisconsin income based on its proportion of the Wisconsin sales of the group. The member's income is modified to include nonapportionable income and offset by net business loss carryforwards to arrive at the member's taxable income. Excess sharable net business loss carryforwards can be shared with other group members proportionate to each member's share of the group's Wisconsin taxable income. The state tax rate is applied to each member's taxable income to arrive at gross tax liability. Each member offsets nonrefundable tax credits against the gross tax liability to arrive at net tax liabilities.

The components of the net tax calculation for each member are aggregated and reported on the group's combined return. The group's aggregate net tax liability is offset by any refundable credits claimed by group members.

Exhibits 4 and 5 provide comparative examples of the net tax liability determined under separate entity and combined reporting for a unitary business consisting of a Wisconsin parent corporation, and three affiliated corporations, including a Wisconsin subsidiary, an Illinois subsidiary, and a Delaware subsidiary. Exhibit 4 illustrates how each corporation would determine its Wisconsin tax liability as a separate corporation, rather than as a member of a combined group. The Delaware corporation does not have nexus with Wisconsin and therefore would not pay state corporate income/franchise taxes. Also, the Wisconsin subsidiary corporation would receive a \$5,000 payment of its refundable tax credit because its

income is entirely offset by a business loss carryforward.

Exhibit 5 shows the calculation of tax liability for the same group of corporations using combined reporting. For purposes of the example, the intercompany transactions are assumed to be Wisconsin sales between the corporations. Consequently, these sales would be excluded from each member's sales apportionment factor, as well as from each member's income. Note that combined unitary income is first determined on the group level, then each member determines its net income and tax liability. The components used to determine each member's net tax liability, such as the member's nonapportionable income, are reported on the combined return. In the example, it is assumed that the net business loss carryforward of the Wisconsin subsidiary is a sharable business loss carryforward, and that the corporation chooses to share the unused carryforward with the other members of the group. Those members use the aggregate loss carryforward proportionate to their share of the group's Wisconsin taxable income, after each member applies its net operating loss carryforwards. The net tax liability of each member is aggregated on the combined return, and refundable tax credits are applied to the group's net tax liability.

In the example, the group's net tax liability is lower using combined reporting than the sum of the individual corporations' tax liabilities calculated as separate entities. Factors such as the change in the method of calculating apportionable income, the apportionment factor for the group and its members, and the availability and use of net sharable net business loss carryforwards, could cause the net tax liability for a group of corporations to increase, decrease, or be essentially unaffected by the use of combined reporting. In Wisconsin, the required use of combined reporting has resulted in a net increase in aggregate corporate tax collections.

Exhibit 2: Computation of Wisconsin Net Tax Liability for a Single Multijurisdictional Corporation

1. Determine Total Income

- a. $\text{Gross Sales} - \text{Cost of Goods Sold} = \text{Gross Profit}$
- b. $\text{Gross Profit} + \text{Other Income or Loss (Dividends, Interest, etc.)} = \text{Total Income}$

2. Determine Apportionable Income

- a. $\text{Total Income} - \text{Deductions (Wages, Depreciation, Interest Paid, etc.)} = \text{Net Income}$
- b. $\text{Net Income} - \text{Total Nonapportionable Income} = \text{Total Apportionable Income}$

3. Determine Wisconsin Net Income

- a. $\text{Wisconsin Apportionment Ratio} = [\text{Sales by WI Destination} \div \text{Total Sales}]$
- b. $\text{Total Apportionable Income} \times \text{Wisconsin Apportionment Ratio} = \text{Income Apportioned to Wisconsin}$
- c. $\text{Apportioned Income} + \text{Income Allocated to Wisconsin} - \text{Wisconsin Net Business Loss} = \text{Wisconsin Net Income}$

4. Determine Wisconsin Net Tax

- a. $\text{Wisconsin Net Income} \times 7.9\% = \text{Gross Tax}$
- b. $\text{Gross Tax} - \text{Tax Credits (Manufacturing and Agriculture, Research, etc.)} = \text{Wisconsin Net Tax}$

Exhibit 3: Computation of Wisconsin Net Tax Liability for a Combined Group

1. Determine Combined Unitary Income - Group Level

- a. $\text{Aggregate Net Federal Income} = \text{Aggregate Federal Income} - \text{Aggregate Federal Deductions}$
- b. $\text{Aggregate Federal Taxable Income of Group} + \text{Adjustments:}$
 1. Defer Income, Expense, Gain or Loss on Transactions between Group Members
 2. Calculate Aggregate Net Capital Gain/Loss, Including Sharable Loss Carryforwards, and Apply Capital Loss Limit to Aggregate Capital Gains/Losses
 3. Calculate Aggregate Charitable Contribution Limitation
- c. $\text{Adjusted Aggregate Federal Taxable Income} + \text{Aggregate Wisconsin Additions to Income (State Taxes, Related Entity Expenses)} - \text{Aggregate Wisconsin Subtractions from Income (Foreign Dividend Gross Up, Dividends between Group Members, Related Entity Expenses)} = \text{Aggregate Group Income with Wisconsin Modifications}$
- d. $\text{Aggregate Group Income with Wisconsin Modifications} - \text{Nonapportionable and Separate Entity Income (Rents, Royalties, Water's Edge Income)} = \text{Aggregate Apportionable Group Income}$
- e. $\text{Aggregate Apportionable Group Income} \times \text{Wisconsin Aggregate Apportionment Factor (Total Group Member Sales in Wisconsin} \div \text{Total Group Sales)} = \text{Wisconsin Combined Unitary Income}$

2. Determine Each Member's Income and Tax*

- a. $\text{Combined Unitary Income} \times \text{Member's Apportionment Factor (Member's Sales in Wisconsin} \div \text{Total Group Sales)} = \text{Individual Member's Apportionable Income}$
- b. $\text{Member's Apportionable Income} + \text{Member's Separate Entity and Nonapportionable Income (Rents, Royalties)} = \text{Member's Income before Business Loss Carryforwards}$
- c. $\text{Member's Income before Business Loss Carryforward} - \text{Business Loss Carryforwards, Including Sharable Business Loss Carryforwards} = \text{Member's Wisconsin Net Income}$
- d. $\text{Member's Wisconsin Net Income} \times 7.9\% = \text{Member's Wisconsin Gross Tax}$
- e. $\text{Gross Tax} - \text{Nonrefundable Tax Credits} = \text{Member's Net Tax}$

3. Determine Combined Group Aggregate Tax Liability

- a. $\text{Aggregate Net Tax of Group Members} - \text{Refundable Tax Credits} = \text{Combined Group's Net Tax Liability}$

* Each member calculates net tax individually. Individual amounts are aggregated and reported on the combined return.

= Member Net Tax Liability	\$138,173	\$0	\$29,302	\$0	\$167,475
I. Combined Group Wisconsin Net Tax Liability+					
Aggregate Member Net Tax Liabilities					\$167,475
- Refundable Tax Credits	0	5,000	0	0	<u>-5,000</u>
= Group Net Tax Liability					\$162,475++

* Intercompany sales are excluded from the apportionment factor.

** For purposes of this example it is assumed that the unused business loss carryforwards of the Wisconsin subsidiary are sharable.

+ Refundable tax credits are applied against the entire group's tax liability.

++ This example shows that, compared to the total of individually calculated tax liabilities shown in Exhibit 4, the liability of the group is lower using combined reporting. Under combined reporting, some groups experience an aggregate tax increase, some experience a decrease, and some have no change in aggregate tax liability. However, in the aggregate, combined reporting increased corporate income tax revenues in Wisconsin.

Summary Data

The following tables provide summary data concerning the Wisconsin corporate income/franchise tax.

Corporate income/franchise tax collections, state general fund tax collections, and corporate tax collections as a percent of total general fund collections for fiscal years 2003-04 through 2013-14 are shown in Table 1. The table indicates that corporate tax collections vary significantly from year to year. For example, annual growth rates ranged from -24.9% in 2008-09, to 32.6% in 2009-10. The large decrease in 2008-09 shows the effect of the recent recession on collections. The increases from 2009-10 through 2013-14 reflect improved corporate profits and the implementation of combined reporting. Corporate tax collections as a share of total general fund tax revenues have fluctuated from 5.2% in 2008-09 to 7.1% in 2006-07.

Table 2 presents tax year 2011 summary statistics for the total number of returns filed, the number of returns that had a net tax liability, the income apportioned to Wisconsin before and after the use of loss carryforwards from previous

Table 2: Wisconsin Aggregate Statistics on State Corporate Tax Returns (Tax Year 2011)

Count -- All Returns	42,097
Count -- Returns with Net Tax Liability	14,186
WI Net Income Before Carryforwards	\$12,261,496,627
Loss Carryforwards Used	2,347,455,736
WI Net Income	9,914,040,891
WI Gross Tax Liability	782,841,679
Non-Refundable Credits Used	40,315,037
WI Net Tax	742,526,642
Economic Development Surcharge	12,222,189
Refundable Tax Credits	25,718,903

years, gross tax liability, the amount of non-refundable credits used, and Wisconsin net tax liability for C corporations. Also included are the amount of economic development surcharge paid by, and the amount of refundable tax credits paid to, corporate filers. The surcharge is a separate tax collected on a corporate tax return and is not included in calculating Wisconsin net tax. Refundable credits are not included in the calculation of Wisconsin net tax because the credits can be paid to taxpayers with no tax liability and are considered expenditures rather than a reduction in tax revenue.

Table 1: Wisconsin Corporate Tax Collections 2003-04 to 2013-14 (\$ in Millions)

Fiscal Year	Corporate Tax Collections	Percent Change	Total General Fund Collections	Percent Change	Corporate Tax As Percent of General Fund Collections
2003-04	\$650.5	23.6%	\$10,739.3	5.3%	6.1%
2004-05	764.1	17.5	11,396.7	6.1	6.7
2005-06	780.3	2.1	12,030.1	5.6	6.5
2006-07	890.1	14.1	12,618.0	4.9	7.1
2007-08	837.8	-5.9	13,042.9	3.4	6.4
2008-09	629.5	-24.9	12,113.2	-7.1	5.2
2009-10	834.5	32.6	12,131.7	0.2	6.9
2010-11	852.9	2.2	12,911.6	6.4	6.6
2011-12	906.6	6.3	13,514.6	4.7	6.7
2012-13	925.4	2.1	14,085.6	4.2	6.6
2013-14	967.2	4.5	13,948.1	-1.0	6.9

porations from 2011 tax year returns is illustrated in Table 3. Combined reports are shown as single returns. The table shows that although 42,097 corporations filed returns, only 14,186 had net tax liability. Corporations can have no tax liabilities because deductible expenses and loss carryforwards entirely offset income. In other cases, tax credits entirely offset tax liability. Table 3 also shows that a large proportion of the corporate income tax was from a relatively small number of returns. About 88.7% of total corporate tax liability was generated by 2.69% of the corporations and combined groups that filed tax returns.

Table 3 does not directly translate into taxes paid by size of corporation since, for example, a very large corporation which suffered a loss could have no taxable income in the year of the loss, or in succeeding years, if the loss was carried forward. Also, due to combined reporting,

many of the returns reflected the tax liabilities of combined groups of corporations. Note that a few returns shown in the zero income group have a net tax liability. This is because a small number of combined groups have zero income for the combined return, but have members with a net tax liability on nonapportionable income that is greater than the member's share of the group's current year net business loss.

Because Tables 2 and 3 primarily show the total tax liability for corporations from tax year 2011, it differs from the total corporate collections shown for fiscal year 2011-12 in Table 1. The tables do not include corporate income/franchise taxes paid by S corporations. Tax year amounts do not include additional collections due to audit adjustments and delinquent collections. Finally, fiscal year collections include declaration payments for a more recent year than the tax year collections shown in Tables 2 and 3.

Table 3: Corporate Tax Liability by Net Income Class (Tax Year 2011)

Wisconsin Net Income	Number of Returns	% of Returns	Total Income	% of Total Income	Number of Taxpayers	Total Liability	% of Total Liability
Zero or Less	27,478	65.27%	\$0	0.00%	6	\$132,220	0.02%

APPENDIX 1

Jurisdictional Nexus Under the Corporate Income/Franchise Tax

DOR has promulgated administrative rules which describe, for non-Wisconsin firms, what type of business activities are needed to make such firms subject to the state's corporate income/franchise tax. Under those rules, a non-Wisconsin (foreign) corporation is generally considered to have "nexus" with Wisconsin and be subject to taxation if it has one or more of the following activities in the state:

1. Maintenance of any business location in Wisconsin, including any kind of office.
2. Ownership of real estate in Wisconsin.
3. Ownership of a stock of goods in a public warehouse or on consignment in Wisconsin.
4. Ownership of a stock of goods in the hands of a distributor or other nonemployee representative in Wisconsin, if used to fill orders for the owner's account.
5. Usual or frequent activity in Wisconsin by employees or representatives soliciting orders with authority to accept them.
6. Usual or frequent activity in Wisconsin by employees or representatives engaged in purchasing activity or in the performance of services, including construction, installation, assembly, or repair of equipment.
7. Operation of mobile stores in Wisconsin, such as trucks with driver-salespersons, regardless of frequency.
8. Miscellaneous other usual and frequent activities by employees or representatives in Wisconsin such as credit investigations, collec-

tion of delinquent accounts, or conducting training classes or seminars for customer personnel in the operation, repair, and maintenance of the taxpayer's products.

9. Leasing of tangible property and licensing of intangible rights for use in Wisconsin.
10. The sale of other than tangible personal property such as real estate, services, and intangibles, in Wisconsin.
11. The performance of construction contracts and personal services contracts in Wisconsin.
12. Engaging in substantial activities that help to establish and maintain a market in Wisconsin.

Additionally, the following activities constitute "nexus" if not prohibited by federal law: (1) issuing credit, debit, or travel and entertainment cards to customers in Wisconsin; (2) regularly selling products or services of any kind or nature to customers in the state that receive the product or service in Wisconsin; (3) regularly soliciting business from potential customers in the state; (4) regularly performing services outside the state for which benefits are received in the state; (5) regularly engaging in transactions with customers in the state that involve intangible property and result in receipts flowing to the taxpayer in the state; (6) holding loans secured by real or tangible personal property located in the state; (7) owning, directly or indirectly, a general or limited partnership that does business in Wisconsin, regardless of the percentage of ownership; and (8) owning, directly or indirectly, an interest, in an LLC that does business in Wisconsin and is

treated as a partnership for federal income tax purposes, regardless of the percentage of ownership.

The statutes provide certain exemptions from the nexus provisions for non-Wisconsin corporations whose in-state activities are limited to certain printing or storage services in or on property in Wisconsin. Under these provisions, nexus is not established in any of the following situations:

1. The corporation stores tangible personal property, such as inventory or a stock of goods, in or on property in the state that is not owned by the corporation, and the property is delivered to another corporation in the state for manufacturing, fabricating, processing, or printing in the state.

2. The corporation stores, in or on property not owned by the corporation, finished goods that have been fabricated, processed, manufactured, or printed in the state, and the entire amount of such goods is shipped or delivered out-of-state by another corporation in the state.

3. The corporation is an out-of-state publisher that has finished publications printed and stored in this state, in or on property not owned by the publisher, whether or not the publications are subsequently sold or delivered in this state or shipped outside of it.

Similarly, nexus is not established if all of the following conditions are met:

1. The out-of-state corporation stores tangible personal property in the state on property not owned by the corporation;

2. The property is stored for 90 days or less;

3. The property is stored on another person's property in the state and is transferred to the person for manufacturing, processing, fabricating, or printing on the parcel of property in or on which it is stored; and

4. The assessed value of the parcel of property in or on which the tangible personal property is stored and manufactured was between \$10 million and \$11 million on January 1, 1999.

APPENDIX 2

Corporate Income/Franchise Tax Deductions

The following deductions are allowed under the Wisconsin corporate income/franchise tax.

Compensation of Officers. Salaries, wages, and other forms of remuneration to officers of the business are deductible expenses. However, a publicly-held corporation cannot deduct compensation in excess of \$1.0 million per tax year that is paid or accrued to certain executives. The deduction limitation applies to: (1) compensation to the principal executive officer (or an individual acting in that capacity); and (2) any other employee having total compensation required to be reported to shareholders under SEC rules because the employee is among the four highest compensated officers in the tax year. Compensation subject to the limitation includes cash and noncash benefits paid for services except for certain specified types of remuneration. The \$1.0 million limit on deductible compensation is reduced by the amount of excess golden parachute payments that are not deductible under the IRC. The deduction is further limited to \$500,000 for compensation paid to certain executives of: (a) financial institutions that accept money from the troubled asset recovery program; and (b) certain health insurance providers.

Salaries and Wages. A deduction is provided for a reasonable salary allowance or other compensation for services actually rendered by employees. The form of compensation (fixed salary, percentage of gross or net income, commissions, bonuses, contributions to pensions or profit sharing plans) or method of payment is not controlling as to deductibility. To be deductible, the compensation must be: (1) an ordinary and necessary expense; (2) reasonable in amount; (3) based on actual services rendered; and (4) actually paid or incurred. Amounts that are deducted

from an employee's salary for federal payroll taxes are deducted as part of the employee's wages.

Repairs. A deduction is allowed for the cost of incidental repairs and maintenance, such as labor and supplies that do not add materially to the value of property or appreciably prolong its life, but rather keep the property in ordinarily efficient operating condition.

Taxes. In general, taxes that are ordinary and necessary expenses paid or incurred in carrying on a trade or business are deductible. To be deductible, taxes must be directly attributable to the taxpayer's trade or business, or to property from which rents or royalties are derived. The expense must be a tax imposed by a government that is paid into the government treasury for public purposes. Charges for specific services or special purposes (user fees) are often not considered taxes and are not deductible as such. However, these charges might be deductible under another provision--for example, as business expenses.

Federal law generally allows a deduction for taxes paid by a corporation either separately or in connection with the acquisition of property that can be deducted either as a current year expense or depreciated over time. However, federal law does not permit deductions for the following taxes: (1) federal income taxes; (2) foreign or U.S. possession income taxes if a foreign tax credit is claimed; and (3) taxes not imposed on the corporation.

Under state law, the federal windfall profits tax and the environmental tax are not deductible. Foreign taxes are only deductible if the income on which the taxes are based is taxable in Wis-

consin. State law further excludes from the deduction the following taxes paid to any state (including Wisconsin) or the District of Columbia: (1) value-added taxes; (2) single business taxes; or (3) taxes on or measured by net income, gross income, gross receipts, or capital stock. However, the net proceeds tax on metalliferous mining and the state gross receipts and ad valorem utility taxes and license fees are deductible.

Interest. A deduction is allowed for interest on indebtedness incurred in the operation of a trade or business. Interest is defined as compensation for the use or forbearance of money. Only interest on actual indebtedness is deductible. There must be both a legal and an economic obligation for the debt.

In most cases, the time when interest is deducted is determined by the taxpayer's method of accounting. Generally, the interest is deductible when it accrues or is paid in accordance with the interest provisions of the loan. However, in certain cases, interest must be accounted for using specific rules.

Interest on debt must be capitalized if the debt is incurred, or continued, to finance the production of real or certain tangible personal property that is produced by the taxpayer and that has: (1) a long useful life [20 years]; (2) an estimated production period exceeding two years; or (3) an estimated production period exceeding one year and a cost exceeding \$1.0 million.

Deductions claimed for interest payments to related entities must be added back to income under the state corporate income/franchise tax, if certain conditions are not met (these provisions are described in a subsequent section).

Charitable Contributions. Ordinarily, a corporation can claim a limited deduction for charitable contributions made in cash or property to, or for the benefit of, a qualified organization. However, payments made to a charitable organi-

zation that are determined to be business expenses are deductible without regard to the percentage limits imposed on charitable contributions. To be a business expense, the payments must bear a direct relationship to the taxpayer's business, and be made with a reasonable expectation of a financial return commensurate with the amount of the donation.

If the payments made by the business are in fact charitable contributions (made with a charitable intent) they may not be deducted as business expenses. Instead, they are subject to percentage limitations. The total amount of the deduction claimed may not be more than 10% of taxable income. Charitable contributions in excess of the 10% limitation may not be deducted for the tax year, but may be carried over and used to offset income for the next five years, subject to the 10% limit. Special rules govern contributions of certain property to charitable organizations. For combined groups, the charitable contributions deduction limitation is computed so that it applies to the combined group as a whole.

Depreciation. The deduction for depreciation allows taxpayers to recover, over a period of years, the cost of capital assets used in a trade or business or for the production of income. The deduction is an allowance for the wear and tear, deterioration, or obsolescence of the property. Depreciable property is generally tangible and either real or personal property. Land is not depreciable. In certain cases, intangible property may be depreciated. To be depreciable, the property must have a determinable life of more than one year, and it must decline in value through use or the passage of time. Only property used in a trade or business or held for the production of income is eligible for a depreciation deduction.

For tangible assets, depreciation applies to only that part of the property that is subject to wear and tear, to decay or decline from natural causes, or to exhaustion and obsolescence. The

property must also be of a relatively permanent nature with a useful life of over one year.

Intangible assets may be depreciated or amortized if it is known from experience or other factors that the assets will be of use in the business or in the production of income for only a limited period of time and if that time period can be estimated with reasonable accuracy. Certain patents, copyrights, and computer software are examples of depreciable intangibles. Intangible assets cannot be depreciated under an accelerated method but, rather, must be depreciated using a reasonable method, usually the straight-line method. However, the cost of many intangibles can be amortized over 15 years.

In order to claim depreciation on any property, the taxpayer must have a capital interest in it. Generally, the owner of the depreciable property may claim the deduction. However, the right to deduct depreciation is not predicated solely upon ownership of the legal title, but also upon investment in the property.

The amount to be recovered by depreciation is the cost or other appropriate basis of the property. The life over which the depreciable basis of property is recovered depends upon the type of asset that is depreciated and the system of depreciation that is used.

The Modified Accelerated Cost Recovery System (MACRS) rules of depreciation apply to most tangible property placed in service after 1986. Generally, the Accelerated Cost Recovery System (ACRS) of depreciation applies to property placed in service after 1980 and before 1987.

Property, other than MACRS and ACRS property, must be depreciated using general depreciation rules. Under the general rules, the basis to be recovered through depreciation must be charged off over the life of the property using recognized methods of depreciation, including

the straight-line, declining balance, and sum-of-the-years-digits methods. MACRS and ACRS property is recovered using statutory percentages that are annually applied to the depreciable basis of the property over a specified recovery period.

Under the general depreciation rules, three particular methods of depreciation are generally authorized:

The straight-line method. The straight-line method involves writing off the cost or other applicable basis of the property in equal annual amounts over the established life of the property.

The declining-balance method. Under declining-balance methods, depreciation is greatest in the first year and smaller in each succeeding year. Each year, the depreciable basis of the property is reduced by a certain amount and the associated rate of depreciation is applied to the resulting balance in each of the remaining years of the property's life. For example, under the 200% or double declining-balance method, assets are depreciated at twice the straight-line rate. Generally, the taxpayer is allowed to switch to the straight-line method when it becomes advantageous.

Sum-of-the-years-digits method. To use this method, the taxpayer must first compute the sum of each of the digits comprising the asset's life. For example, for an asset with a depreciable life of four years, the numbers 4, 3, 2, and 1 are summed to a total of 10. In the first year, $4/10^{\text{th}}$ of the depreciable basis is written off. In succeeding years, $3/10^{\text{th}}$, $2/10^{\text{th}}$, and $1/10^{\text{th}}$ of the depreciable basis, respectively, is written off until the entire basis of the asset, minus salvage value, is recovered.

Since the early 2000s, the federal government has enacted a number of first-year bonus depreciation deductions that were intended to encourage business investment and stimulate the national economy. In January of 2013, the American Taxpayer Relief Act of 2012 was signed by

the President. The Act extended 50% bonus depreciation to 2013 for most types of property or to 2014 for certain property with longer production periods and aircraft. The basis of the property and the depreciation allowances in the year the property is placed in service and in later years are adjusted to reflect the additional first year depreciation reduction. Under the 2013 legislation, the federal bonus depreciation provisions were scheduled to expire in tax year 2014 for most types of property.

Due to the potential impact on state revenues, the Legislature chose not to conform to the federal bonus depreciation provisions from 2002 through 2013. Instead, the Legislature included provisions in 2001 Wisconsin Act 109 that referenced state amortization and depreciation provisions to the federal IRC in effect on December 31, 2000. The Act 109 provision remained in effect until it was modified in 2013 Wisconsin Act 20.

Under 2013 Act 20, the treatment of depreciation was revised to be consistent with federal law in effect on January 1, 2014, for property placed into service on or after that date. For property placed into service before that date, the taxpayer must consolidate the difference between the federal tax basis in the property and the state tax basis into a single asset account that may be amortized over five years (tax years 2014 through 2018).

On December 19, 2014, the President signed the Tax Increase Prevention Act of 2014, which extended 50% bonus depreciation to 2014, or 2015 for certain aircraft and property with longer production periods. Under this legislation, the federal bonus depreciation deduction is scheduled to terminate for most property in tax year 2015 and for all property in 2016. Because the state depreciation provisions refer to the IRC in effect on January 1, 2014, the 50% bonus depreciation provisions will not be available to state taxpayers unless legislation is enacted to adopt

the federal extension. In addition, if the federal government were to enact new bonus depreciation provisions, or make other changes regarding depreciation, the Legislature would have to update the IRC reference in order to adopt the new provisions at the state level.

Under current state law, tangible depreciable property is generally subject to MACRS. MACRS consists of two systems that determine how a taxpayer depreciates property. The most commonly used system is called the General Depreciation System. There is also an Alternative Depreciation System (ADS), which must be used for certain types of property, such as property used predominantly outside the U.S. Taxpayers also can elect to use ADS. The main difference between the two systems is that ADS usually provides for a longer period of depreciation and uses only the straight-line method. Although most property placed in service after 1986 is depreciated under MACRS, some types of property are excluded from MACRS treatment, including certain public utility property, intangible assets, and motion picture films, video tapes, and sound recordings.

Under MACRS, the cost of property is recovered by using accelerated methods of cost recovery and statutory recovery periods and conventions. The deduction is computed by first determining the MACRS basis of the property. Each item of eligible property is then assigned to a specific class, and each class establishes a recovery period over which the cost of the property is recouped, using the applicable depreciation method and convention. Depreciation tables may be used by multiplying the basis of the assets by the applicable percentage for the applicable year of the recovery period. Alternatively, the deduction can be calculated using the appropriate method, recovery period, and convention. Deductions can be claimed for used property, and the cost recovery methods and periods are the same as those used to depreciate new property.

Specifically, the cost of eligible property is recovered over a 3-, 5-, 7-, 10-, 15-, 20-, 25-, 27.5-, or 39-year period depending upon the type of property involved. Depreciation methods are prescribed for each MACRS class. Generally, personal property is assigned to the three-year class, the five-year class, the seven-year class, or the 10-year class. Real property is assigned to the remaining classes based on the type of property involved. Property included in the three-year, five-year, seven-year, and ten-year classes is depreciated using the double declining balance method, switching to the straight-line method at a time which maximizes the depreciation allowance. Agricultural property used in farming and placed in service after 1988 must be depreciated using the 150% declining balance method. Property included in the 15-year and 20-year classes is depreciated using the 150% declining balance method, again switching to the straight-line method at a time which maximizes the depreciation allowance. Fifteen-year property includes certain land improvements, municipal waste treatment plants, retail motor fuel outlets, and electric transmission property. Twenty-year property includes certain multipurpose farm buildings. Twenty-five year property is generally water utility property and depreciated using the straight-line method. Residential rental property is depreciated over 27.5, years and nonresidential real property not included in other classes is depreciated over 39 years, both using the straight-line method.

Section 179 Election to Expense Depreciable Assets. Under Section 179 of the IRC, a taxpayer may elect to treat all or a portion of the cost of qualifying property used in the active conduct of a trade or business, up to a limit, as a deductible business expense rather than as a capital expenditure. Such an expense or cost is deductible in the year in which the property is placed in service. The amount claimed as a deduction is referred to as a Section 179 expense allowance. Qualifying property is generally:

1. Tangible personal property.
2. Other tangible property (except buildings and their structural components) used as: (a) an integral part of manufacturing, production, or extraction, or of furnishing transportation, communications, electricity, gas, water, or sewage disposal services; (b) a research facility used in connection with any of these activities; or (c) a facility used in connection with such activities for the bulk storage of tangible commodities.
3. Single purpose agricultural property (livestock or horticultural structures).
4. Storage facilities (except buildings and their structural components) used in connection with distributing petroleum or any primary product of petroleum.

Under the Tax Increase Prevention Act of 2014, the federal Section 179 deduction is the cost of qualifying property, up to a maximum limit of \$500,000 in tax year 2014. The deduction for a claimant is subject to a total investment limit of \$2 million for property placed in service in a single tax year, after which any additional investment results in a dollar-for-dollar phase out of the deduction. For example, if a taxpayer purchased \$2.1 million of eligible property under Section 179 in 2014, the maximum deduction that could be taken by the taxpayer would be \$400,000. In addition to the phase-out provisions for investments in excess of \$2 million, the amount eligible to be expensed in a year may not exceed the taxable income of the taxpayer that is derived from the active conduct of a trade or business for that year. Any amount that is not allowed as a deduction because of the taxable income limitation may be carried forward to succeeding years and deducted, subject to the total investment and taxable income limits. Under current federal law, the \$500,000 deduction limit will be reduced to \$25,000 in 2015 and the \$2 million total investment limit will be reduced to \$200,000.

The basis of the property is reduced by the amount of this deduction. The deduction is generally available to all corporate and individual taxpayers, but is not available to trusts or estates.

Pursuant to 2013 Wisconsin Act 20, state taxpayers are generally subject to current Section 179 IRC provisions. As a result, for tax year 2014, Wisconsin taxpayers may elect to deduct under state law up to \$500,000 of the cost of qualifying property rather than taking depreciation deductions over a specified recovery period in the same manner as permitted under federal law. Any amount that is not allowed as a deduction because of the taxable income limitation may be carried forward to succeeding years and deducted, subject to the total investment and taxable income limits. As under federal law, beginning in tax year 2015, the state deduction limit will fall from \$500,000 to \$25,000 and the total investment limit will decline from \$2 million to \$200,000. Any future federal law changes to the Section 179 deduction will automatically be adopted under state law.

Since 2003, the federal government temporarily increased the deduction limit and investment limit for Section 179 property in an effort to stimulate business investment. However, due to the potential revenue impacts, these temporary increases were not adopted in Wisconsin prior to 2014. Under 2013 Act 20, the Wisconsin Section 179 provisions were federalized beginning in tax year 2014.

Amortization. Amortization provisions allow a taxpayer to annually deduct a portion of certain capital expenses that are not ordinarily deductible. Generally, these expenses are not otherwise deductible because: (1) they relate to assets that are not depreciable because the assets have unlimited or indefinite life; or (2) they pertain to organizational or investigative expenses that were incurred before the taxpayer went into business. The deduction for amortization is similar to the straight-line method of depreciation in

that a taxpayer is allowed to recover the capital costs through an annual deduction over a fixed period of time. Generally, the capital expenses which are amortized are deducted in equal monthly amounts over the amortization period. The amortization period depends upon the type of asset that is acquired. Expenses which may be amortized include: (a) the cost of certain computer software; (b) the cost of certified pollution control facilities; (c) certain bond premiums; (d) research and experimental expenditures; (e) the cost of acquiring a lease; (f) qualified forestation and reforestation costs; (g) business start-up expenditures; and (h) certain organizational expenditures.

In addition, the capitalized costs of "amortizable Section 197 intangibles" can be amortized over 15 years. Generally, Section 197 intangibles are eligible for the amortization deduction if acquired after August, 1993, and held in connection with a trade or business, or in an activity engaged in for the production of income. The following assets are Section 197 intangibles: (1) goodwill; (2) going concern value; (3) workforce in place; (4) business information base; (5) patents, copyrights, formulas, and similar items; (6) customer-based intangibles; (7) supplier-based intangibles; (8) licenses, permits, and other government granted rights; (9) covenants not to compete; (10) franchises, trademarks, and trade names; and (11) contracts for use, or term interest in, a Section 197 intangible.

Bad Debts. A deduction is allowed for business or nonbusiness debt that becomes worthless. The debt must arise from a debtor-creditor relationship based upon a valid and enforceable obligation to pay a fixed or determinable sum of money. Generally a debt is worthless when the creditor who has made a reasonable effort to collect the debt no longer has a chance to be repaid. Bad debts are characterized as business or non-business debts, with each type of debt having its own rules for deductibility.

A bad debt is deductible as a business bad debt if the creation of the debt was proximately related to the taxpayer's trade or business. In addition, the dominant motive for the creation of the debt must be to benefit the taxpayer's trade or business. The bad debts of a corporation are considered business bad debts. To deduct a bad debt, the taxpayer must have previously included the amount in income, or loaned out cash.

Nonbusiness debt is a debt other than: (1) a debt created or acquired in connection with the taxpayer's trade or business; or (2) a loss from the worthlessness of a debt that is incurred in the taxpayer's trade or business. Transactions not entered into for profit are treated as nonbusiness debts. If a nonbusiness debt becomes worthless, it is deductible only as a short-term capital loss, and only in the year the debt becomes totally worthless.

Rent. Rent expenses are deductible as business expenses if they are incurred as a condition to the continued use or possession of property used in a trade or business, and the taxpayer has not taken or is not taking title or has no equity in the property. The amount of rent claimed can be a fixed sum, or can be based upon a percentage of profits, a percentage of gross sales or a combination of these. A deduction is allowed where the amount of rent is fixed in an arm's-length transaction without a tax-avoidance motive. In general, rental expenses are deductible in the year they are accrued or paid. However, in certain cases, such as where advance payments are made by a cash-basis taxpayer, special rules for determining the deduction apply. Royalties are deductible as business expenses under rules that are similar to those governing the deductibility of rent paid for business or income-producing purposes.

Rent payments to related entities must be added back to income if certain conditions are not met. These provisions are described in a subsequent section.

Depletion. A deduction for depletion is allowed in determining the income derived from the sale of natural resources; it returns to the owner or operator (extractor) the capital investment on a pro rata basis over the productive life of such resources. Depletion is the exhaustion of natural resources by the process of mining, quarrying, drilling, and felling. The depletion deduction, in effect, represents the reduction in the content of the reserves from which the resource is taken. The taxpayer must have an economic interest (capital investment) in the mineral deposit or timber in order to claim the deduction.

Methods for computing depletion are cost depletion or percentage depletion. Although a taxpayer must generally use the depletion method that produces the greatest deduction each year, the allowance for percentage depletion has historically been preferred over cost depletion since percentage depletion may be claimed even though the total deductions exceed the cost basis of the resource. However, unless the taxpayer is an independent producer or royalty owner, percentage depletion generally cannot be used for oil and gas wells.

Under the Wisconsin corporate income tax, taxpayers were not allowed to claim the depletion deduction using the percentage depletion method prior to tax year 2014. Pursuant to 2013 Wisconsin Act 20, taxpayers may claim the depletion deduction using either the cost depletion method or the percentage depletion method. In addition, a taxpayer may use cost depletion in one year or percentage depletion in another year on the same property and must choose the larger deduction for that year. Any future federal law changes regarding the deduction for depletion will be automatically adopted for state tax purposes.

A prerequisite to calculating cost depletion is determination of the property's adjusted basis. A mineral property's basis is the taxpayer's capital investment in the property that may be recovered

tax free during the period of production. Basis is the initial cost of the property adjusted for capital expenditures and allowable depletion, for the purpose of determining gain or loss upon a sale or exchange of the property. To calculate cost depletion, the taxpayer must: (1) determine the amount of basis of the mineral property for the tax year; (2) divide that amount by the number of units of mineral remaining at the end of the year to be recovered from the property (including units recovered but not sold) plus the number of units sold within the tax year; and (3) multiply the depletion unit, so determined, by the number of units of mineral sold within the tax year. The resulting amount determines the cost depletion deduction for the year. Each year the basis of the property is reduced by the amount of depletion deducted for that year. The remaining basis is used in computing cost depletion for the following year.

For property eligible for percentage depletion, federal statutes prescribe specified percentages, which vary from five percent to over 20%, that are used for each type of natural resource. To calculate percentage depletion, the taxpayer must know: (1) the applicable percentage rate; (2) the taxpayer's gross income from the natural resource property; and (3) the taxpayer's taxable income from the property computed without the depletion deduction and the deduction for income from domestic production activities. The deduction is then determined by multiplying the percentage specified for the particular natural resource by the taxpayer's gross income from the resource property for the year. The deduction is taken on the taxpayer's income tax return in the year of sale of the natural resource product rather than in the year of production.

Insurance. The cost of insurance can generally be deducted as a business expense if it is an ordinary and necessary expense paid or incurred in carrying on a trade or business. The deduction is usually allowed on a current basis, according to the taxpayer's method of accounting. Howev-

er, in certain cases, such as where direct and indirect costs for certain production and retail activities are capitalized, a taxpayer may have to capitalize certain insurance costs. Premiums paid for the following kinds of insurance related to the taxpayer's trade or business are deductible:

1. Insurance that covers fire, storm, theft, accident or similar losses.
2. Credit insurance that covers losses from bad debts.
3. Group hospitalization and medical insurance for employees, including long-term care insurance, if the coverage represents compensation for services rendered by the employee and total compensation paid to the employee is reasonable.
4. Liability insurance.
5. Malpractice insurance that covers the taxpayer's personal liability for professional negligence resulting in injury or damage to patients and clients.
6. Workers' compensation insurance set by state law that covers any claims for bodily injuries or job-related diseases suffered by employees, regardless of fault.
7. Contributions to a state unemployment insurance fund that are considered taxes under state law.
8. Car and vehicle insurance that covers vehicles used in the taxpayer's business for liability, damages, or other losses.
9. Life insurance that covers corporate officers and employees for services rendered by the officers or employees, if the total compensation paid is reasonable.
10. Business interruption insurance that pays for lost profits if the business is shut down due to

a fire or other cause.

As a general rule, payments made to a reserve fund set up for self-insurance are not deductible, even though the payments are based on estimated premiums that would be paid to an insurance company. Also, premiums paid on insurance purchased to secure a loan are not deductible.

Advertising. Advertising expenses that are reasonable in amount and related to the business activities in which the taxpayer is engaged are deductible. Advertising costs that generate future benefits beyond the current year may be treated as a capital expense and must be capitalized. The taxpayer is free to choose the advertising that best serves the taxpayer's purpose; however, the burden of proving the deductibility of advertising expenses is on the taxpayer.

Other Deductions. Most contributions to retirement plans and certain contributions to employee benefit plans are deductible under federal and state law. Furthermore, ordinary and necessary business expenses related to the operation of a trade or business and not deducted elsewhere can be deducted under a general miscellaneous category. Miscellaneous business expenses generally include: (1) 50% of business meal and entertainment expenses; (2) certain start-up expenses; (3) the cost of materials and supplies used in business operations; (4) legal and professional fees; and (5) expenditures for incidental repairs, maintenance, and improvements that are not capital expenditures.

Other State Adjustments to Federal Provisions

Although state income and deductions are primarily referenced to federal law, there are a number of modifications specified under the state corporate income/franchise tax law that must be made to reflect differences in the state treatment of certain items. These modifications include the following:

1. Income received by an original policy holder or original certificate holder from the sale of a life insurance policy or certificate, or the sale of the death benefit under a life insurance policy or certificate under a viatical settlement contract is excluded from gross income. A viatical settlement contract is a written agreement providing for the payment to the policyholder of a life insurance policy, or to the holder of a group life insurance certificate, insuring the life of a person who has a catastrophic or life-threatening illness or condition, in an amount that is less than the expected death benefit under the policy or certificate, for assigning, selling, devising, or otherwise transferring the ownership of, or the death benefit under the policy or certificate to, the person paying the viatical settlement.

2. The federal gross-up of dividends to reflect taxes claimed in computing the foreign tax credit is excluded in computing income.

3. Corporations subject to the state corporate franchise tax must add to income all interest income not included in federal taxable income under the federal corporate income tax. Also, corporations subject to the state corporate income tax must add to income all interest income not included in federal taxable income, except for interest income which by federal or state law is exempt from taxation. For corporations subject to franchise taxes, interest income from all state and local government bonds is included in the computation of Wisconsin net income. For corporations subject to the income tax, all interest income from state and local government bonds, except that which is exempt by federal law from state taxation, and interest from certain state and local obligations, is included in the computation of Wisconsin net income. In addition, all interest income received by a bank or other corporation actively engaged in the business of lending money with respect to a securities acquisition loan, is includable in Wisconsin net income.

4. In certain specified circumstances where

there is a nonrecognition of income from the discharge of indebtedness, the basis of assets or tax attributes (such as net operating losses, credits, and the depreciable and nondepreciable bases of assets) must be reduced in exchange for the income exclusion. In these cases, state net operating loss and credit provisions apply and the state basis of depreciable property or state tax attributes must be reduced. The reduction rate for credit carryforwards is 7.9%.

5. The federal deduction for wages, salaries, commissions, and bonuses can be claimed only if the name, address, and amount paid to each resident of Wisconsin to whom compensation of \$600 or more has been paid during the taxable year is reported to DOR, or if the Department is satisfied that failure to report has resulted in no revenue loss to the state. Rent payments may be deducted only if the amount paid along with the names and addresses of the parties to whom the rent is paid is reported. Also, payments for salaries, wages, bonuses, interest, and other expenses paid to an entertainer or entertainment corporation may be deducted only if certain withholding, and cash deposit or bond requirements are met.

6. The federal deduction for taxes paid is modified so that: (a) foreign taxes are not deductible, unless the income on which the taxes are based is taxable; (b) Wisconsin utility gross receipts and ad valorem taxes and license fees are deductible; and (c) the state net proceeds tax on mining of metallic minerals is deductible. Also, state taxes and the taxes of the District of Columbia that are value-added taxes, single business taxes, or taxes on, or measured by, all or a portion of net income, gross income, gross receipts, or capital stock are not deductible. The federal windfall profits tax and the environmental tax are not deductible.

7. The rules for federally taxable bonds also apply to bonds that are taxable under the state corporate income/franchise tax, and the rules for

federally tax-exempt bonds apply to bonds that are exempt from Wisconsin taxation. Therefore, if a bond is taxable for Wisconsin purposes, a taxpayer may deduct the amortizable bond premium for Wisconsin. If the bonds are not taxable for Wisconsin purposes, the amortizable bond premium is not deductible. Also, federal provisions are modified for Wisconsin law to require the basis of certain tax-exempt state and local bonds to be reduced by the amount of amortizable bond premium disallowed as a deduction, so that it only applies to bonds that are tax-exempt for Wisconsin.

8. State law differs from federal law and does not allow for operating losses to be carried back to offset income in prior tax years. Federal law permits losses to be carried back for two tax years. In addition, special provisions apply to unused pre-2009 net business loss carryforwards of combined groups.

9. Instead of federal dividends received provisions, corporations may deduct all dividends received from a corporation paid on its common stock if the corporation receiving the dividends owns, directly or indirectly, for its entire tax year, at least 70% of the total combined voting stock of the payor corporation "Dividends received" excludes taxes on dividends paid to a foreign nation and claimed as a deduction. The dividends received deduction is available to corporations that are separate entity filers, and to combined group filers. The federal dividends paid deduction for certain preferred stock of public utilities is excluded from state law.

10. Federal provisions governing the treatment of expenses and interest relating to tax-exempt income are replaced by the state rule that amounts otherwise deductible that are directly or indirectly related to income that is wholly exempt from state tax are not deductible. Furthermore, amounts that are directly or indirectly related to losses from the sale of assets, gains from which would have been exempt under state law,

if the assets were sold or otherwise disposed of at a gain, are also not deductible. "Wholly exempt income" includes amounts received from affiliated or subsidiary corporations as interest, dividends, or capital gains that, because of the degree of common ownership, control, or management between the payor and payee, are not subject to the state corporate income tax. "Wholly exempt income" also includes interest on obligations of the U.S. government for corporations subject to the state corporate income tax rather than the state franchise tax. "Wholly exempt income" does not include income that is excludable, not recognized, exempt, or deductible under specific corporate income/franchise tax provisions. Any expenses or amounts otherwise deductible that are indirectly related to both wholly exempt income or loss, and to other income or loss, are reasonably proportionately allocated to each type of income or loss based on all the facts and circumstances.

11. Federal provisions governing treatment of losses, expenses, and interest in transactions between related taxpayers are modified so that, in circumstances where it is applicable, gains on the sale of transferred property may be reduced only if the corresponding loss was incurred while the corporation was subject to the Wisconsin corporate income tax.

12. Federal provisions which require the reduction in the amount deductible for certain financial institution preference items do not apply to deductions that are allocable to income that is taxable under the state corporate income/franchise tax.

13. Federal laws relating to the treatment of net business loss carryforwards and excess credits in certain corporate acquisitions, and limitations on the use of net business loss carryforwards, certain credits, and capital losses in corporate acquisitions are modified so that Wisconsin net business loss and credit provisions are substituted for federal items.

14. The federal deduction for qualified payments to nuclear power plant decommissioning reserve funds is allowed only if the fund is subject to the Wisconsin corporate income tax.

15. State provisions concerning the treatment of nonprofit institutions (including veterans service organizations), political organizations, cooperatives, associations, and other tax-exempt organizations replace federal provisions except that state law includes federal definitions of the taxable unrelated business income of such organizations.

16. State law does not follow federal treatment of domestic international sales corporations (DISCs). In general, DISCs have no special status for state tax purposes. If the DISC has nexus in Wisconsin for tax purposes and if it is not a "paper corporation" without substance, it is taxed like any other corporation. However, if the DISC is a "paper corporation" having no employees and no actual involvement or activity in connection with the sales that give rise to its income, the income is allocated to the corporation that actually earned the income (usually the parent corporation). The DISC's income is included in that corporation's income for state corporate franchise tax purposes. Generally, a DISC that meets only minimum qualifying requirements and does not carry on any substantial business activity is treated as a paper corporation.

It should be noted that the federal system of taxing DISCs was generally replaced after 1984 with a system of taxing foreign sales corporations (FSC). (The FSC provisions were repealed in 2004.) Although DISCs were not abolished by the Federal Tax Reform Act of 1984, their tax benefits were limited, and an interest charge for tax-deferred amounts was imposed on DISC shareholders. An interest charge DISC is a domestic corporation with income that is predominantly derived from export sales and rentals. Generally, all of the income of a DISC attributable to \$10 million or less of qualified exports

could be deferred. However, an interest charge is imposed on the shareholders of the DISC based on the amount of tax that would have been due if the deferred income had been distributed.

17. State law does not follow federal law governing controlled foreign corporations. As a result, Subpart F income is not includable in the computation of Wisconsin net income. Subpart F income is undistributed income from controlled foreign corporations which is required to be included in the federal net income of the U.S. shareholders of such corporations. Any actual income received from a controlled foreign corporation, such as dividends or interest, is included in the computation of Wisconsin net income, provided the income is not wholly exempt income.

18. Federal treatment of involuntary conversions as nontaxable exchanges is modified so that the federal provisions do not apply to involuntary conversions of property in this state that produce nonbusiness income when the property is replaced with similar property outside the state. In addition, federal provisions do not apply to involuntary conversions of property in the state that produce business income when the property is replaced with property outside the state if, at the time of replacement, the taxpayer is not subject to the Wisconsin corporate income tax.

19. Federal rules governing the filing of consolidated income tax returns and related provisions are not included in state law. However, the U.S. Treasury Regulation (1.1502-13) relating to deferred gain or loss from an intercompany transaction, applies to transactions between combined group members under state combined reporting provisions.

20. Federal law provides a deduction against gross income for a portion of income attributable to domestic production activities. The deduction is equal to the lesser of 9% of a business' quali-

fied production activities income or its taxable income. This deduction is not provided under state law.

As noted, state corporate income/franchise tax provisions are generally referenced to the IRC as amended to December 31, 2010, with a number of exceptions (as previously described). The Legislature generally must modify state law to adopt future changes to federal law, except that any future changes to the federal deductions permitted under IRC Section 179 or for the depletion of natural resources will automatically be adopted for state tax purposes.

Related Entity Transactions

Wisconsin taxpayers are required to add back to income certain expenses for payments to related entities. Specifically, rental expenses, interest expenses, intangible expenses, and management fees deducted or excluded under the IRC have to be added back if they are directly or indirectly paid, accrued, or incurred to, or in connection directly or indirectly with one or more direct or indirect transactions with, one or more related entities. These added back expenses may then be subtracted if certain conditions are met.

An expense may not be deductible if certain factors indicate that the primary purpose of the transaction is tax avoidance. Examples of such factors include, but are not limited to: (1) there was no actual transfer of funds from the taxpayer to the related entity, or the funds were substantially returned to the taxpayer; or (2) if the transaction was entered into on the advice of a tax advisor, the advisor's fee was determined by reference to the tax savings.

"Intangible expenses" subject to the add-back provisions include: (1) royalty, patent, technical, copyright, and licensing fees; (2) costs related to the acquisition, use, or disposition of intangible property (such as financial instruments, patents, and trademarks); and (3) losses related to factor-

ing transactions or discounting transactions.

In general, a "related entity" is an entity that is at least 50% owned by the taxpayer, an entity related to the taxpayer, or an entity owned by certain family members of the taxpayer.

A deduction is allowed for rent, interest, intangible expenses, and management fees that are added back if certain conditions apply indicating that the transaction had a legitimate business purpose other than tax avoidance. If a deduction for rental, interest, intangible expenses, and management fees is denied to a taxpayer because the expenses were paid to a related entity, and the conditions to deduct the expenses were not satisfied, then such amounts are not included in the income of the related entity for state tax purposes. This provision is intended to prevent double-taxation.

Wisconsin law provides that the Secretary of

Revenue (or designee) may distribute, apportion, or allocate gross income, deductions, credits, or allowances between or among two or more organizations, trades, or businesses that are owned or controlled directly or indirectly by the same interests, if the Secretary determines that such an action is necessary in order to prevent evasion of taxes, or to clearly reflect the income of any such organization, trade, or business. State law specifies that this authority is in addition to the related entity provisions. Also, a nonstatutory provision provided that the related entity provisions would have no effect on any bank settlement agreements that DOR has entered into with banks and other financial institutions regarding their investment subsidiaries.

Taxpayers and tax advisors are required to report certain types of transactions that may indicate the existence of tax shelters. Penalties are imposed for engaging in, and failure to report on, such activities.
