State Cashflow Management

In response to repeated general fund cashflow problems in the early 1980s, the state developed a number of cashflow management procedures that continue in use. This paper provides an overview of these procedures, including the statutory provisions that govern cashflow management. In addition, information is presented on recent state cashflow experience and cashflow management alternatives.

State Cashflow Management Procedures

Under current law, there are three tools that are available to the Secretary of the Department of Administration (DOA) in managing the state's cashflow. These tools are: (a) borrowing cash from other state funds on a temporary basis; (b) borrowing cash from investors through the issuance of short-term operating notes; and (c) delaying payments from a fund until enough cash is available to meet its obligations.

Temporary Borrowing from Other State Funds

The state uses the state investment fund as an investment pool for portions of retirement trust assets and cash balances of the state's various funds. In addition, local governments can elect to invest their cash balances in the fund. The state investment fund, which is managed by the State of Wisconsin Investment Board, had approximately \$8.7 billion in assets during September, 2018.

Under the provisions of 2015 Act 55, in any fiscal year the Secretary of DOA is authorized to temporarily reallocate to the general fund an amount equal to 9% of total general purpose reve-

nue (GPR) appropriations in order to support the fund's cashflow (approximately \$1,605 million in 2018-19). The Secretary may permit an additional 3% to be used for temporary reallocations to the general fund for a period not to exceed 30 days (approximately \$535 million in 2018-19). Reallocations of the additional 3% may not be made for consecutive periods. In total, 12% of GPR appropriations (\$2,140 million in 2018-19) may be allocated to the general fund on a temporary basis. No limit applies to temporary reallocations from the budget stabilization fund to the general fund.

For funds other than the general fund, up to \$400 million can be reallocated between the general fund, certain segregated funds, and the local government investment pool.

In order to be eligible for temporary reallocations, a fund must have accounts receivable balances or monies anticipated to be received from lottery proceeds, tax revenues, gifts, grants, fees, sales of service, or interest earnings. The Secretary of Administration determines the allowability of accounts receivable balances and anticipated monies to be received for this purpose.

In no case can borrowing be made from retirement trust assets or from several specific segregated funds. In addition, the fund from which money is borrowed receives interest at the current state investment fund earnings rate. Further, the Secretary cannot temporarily reallocate balances if such borrowing would cause cashflow problems for the fund or account from which it is made. The Department of Administration estimated that the state investment fund had \$1.4 billion of monies available for temporary reallocations in July, 2018, excluding moneys held in the local government investment pool.

Short-Term Borrowing from Investors--Operating Notes

Operating notes can be issued to fund a cash-flow deficit in the general fund. Operating notes were first issued by the state in 1983-84. If a general fund cashflow problem is anticipated, the Secretary of DOA, with the Governor's approval, can request the issuance of operating notes. This request is subject to approval by the Joint Committee on Finance under a 14-day passive review process. If the request is approved, the Building Commission issues the notes.

The amount of operating notes that can be outstanding during a fiscal year is limited to 10% of total GPR and program revenue appropriations for that year. In 2018-19, this 10% limit is approximately \$2.4 billion. In addition, operating notes must be repaid before the end of the fiscal year of issuance. Table 1 shows the amount of operating notes that have been issued annually since 2003-04.

In deciding on the amount of operating notes to issue, three factors are considered. First, federal arbitrage regulations require that the actual cash deficit equal at least 90% of the issuance amount, or the state must rebate interest earnings above the rate paid on the note.

Second, the operating notes should provide sufficient cash to largely avoid temporary reallocations of available state investment fund balances during the fiscal year.

The third factor involves a comparison of the interest cost of the notes and the investment earnings the state would accrue on the note proceeds. In the absence of interest rates favoring operating notes over interfund borrowing, the minimum amount needed to ensure that no payment delays will occur should be issued. If interest rates favor operating notes over interfund borrowing, then a larger amount of notes could be issued, to reduce

the state's use of interfund borrowing, but still within the limits of the federal arbitrage regulations. In a case where interest rates favored operating notes over interfund borrowing, the state's general fund could achieve interest savings by issuing notes in excess of the minimum amount needed to avoid payment delays, compared to not issuing notes or issuing the minimum needed.

As an example of these considerations, for the 2003-04 fiscal year, the administration received authority to issue up to \$800 million in operating notes. However, as shown in Table 1, following an assessment of interest rates and cash flow projections, only \$400 million in operating notes was issued in 2003-04. In 2004-05, the administration was authorized to issue up to \$800 million in operating notes, but decided not to issue notes, based on interest rates and cash flow projections at the time. DOA did not request authority to issue operating notes in 2005-06 or in 2006-07. Notes were issued in each fiscal year from 2007-08 through 2011-12. No notes have been issued since that year.

Table 1: Operating Notes Issuance Since 2003-04 (In Millions)

Fiscal Year	Amount
2003-04	\$400
2004-05	0
2005-06	0
2006-07	0
2007-08	600
2008-09	800
2009-10	800
2010-11	800
2011-12	800
2012-13	0
2013-14	0
2014-15	0
2015-16	0
2016-17	0
2017-18	0
2018-19	0

Payment Delays

The Secretary of DOA can prorate or delay payments from any fund that is having cashflow problems. This authority can only be used after all other possible procedures, including temporary re-allocations of available state investment fund balances, have been used and found to be insufficient. In addition, the Secretary has to notify the Joint Committee on Finance and cannot act without a meeting of the Committee if such a meeting is scheduled within two working days after notification by the Secretary.

The statutes establish a priority schedule for payment in case of cashflow problems. The first priority is debt service payments on state general obligation debt and the second priority is debt service payments on state operating notes. Neither of these debt service payments may be prorated or reduced. State employee payrolls have third priority. The Secretary determines the priority of payments for all other items.

If payments to local units of government are delayed, the Secretary must establish a procedure under which the delay can be appealed for a unit that would be adversely affected. In addition, interest is paid on delayed payments to local units of government at the state investment fund earnings rate for the period of the payment delay.

State Cashflow Experience

The general fund receives revenues and makes expenditures for programs funded with general purpose revenue, federal revenue, and program revenue (PR). Due to the timing of revenue collections and payments of large aid amounts, the state has experienced repeated cashflow problems.

Historically, the general fund experiences

Table 2: Worst-Day Cash Balance in Each Month, 2014-15 to 2017-18 (In Millions)

	2014-15	2015-16	2016-17	2017-18
July	\$474	\$338	-\$217	\$366
August	404	195	-147	-44
September	756	633	246	404
October	1,531	920	981	1,131
November	1,690	1,187	1,497	1,865
December	744	203	14	702
January	1,202	1,199	1,121	1,553
February	1,885	1,783	2,074	2,753
March	1,021	982	941	1,130
April	866	696	780	1,130
May	1,320	1,089	1,168	1,496
June	646	716	836	1,222

lower cash balances in the first half of the fiscal year in the absence of operating notes. Table 2 shows the estimated lowest daily cash balance for each month from 2014-15 to 2017-18. In general, the state is able to cover negative cash balances in the general fund for limited time periods, by temporarily borrowing from other state funds under the authority described above.

Generally, the state's cashflow pattern is attributable to the uneven distribution of both revenues and expenditures. On the revenue side, 53.1% of general fund tax revenues were received during the last half of fiscal year 2017-18. The state's individual income tax contributed to this imbalance, with 56.3% of individual income tax receipts collected in the second half of the fiscal year. It would be difficult for the state to modify the timing of these revenues, because income tax filing deadlines coincide with federal deadlines.

For expenditures, the current payment schedule for county and municipal aids, and for property tax relief through the school levy and first dollar tax credits, contributes to the general fund cashflow difficulties. Payments under these state aid and credit programs are made in July and November. In 2017-18, these appropriations total approximately \$1.92 billion, which were all paid out in

the first five months of the fiscal year.

Over the full course of fiscal year 2017-18, general fund receipts of \$33.42 billion, including general purpose revenue, program revenue, and federal receipts, were greater than disbursements of \$33.26 billion by \$157 million. The fiscal year, which had started with an estimated \$1.37 billion cash balance, ended with an estimated cash balance of \$1.53 billion.

While 2017-18 ended with a cash balance of \$1.53 billion, the undesignated balance in the general fund at the year's end was \$588 million. The undesignated balance is calculated by comparing general fund assets and liabilities as of June 30, of the fiscal year, and deducting required reserve and designated amounts. Since it is an accounting balance relating to general purpose revenue, it differs from the cash balance of the general fund, which includes program revenue and federal receipts and varies on a daily basis. The state's cashflow problems have occurred even when the general fund ended with positive undesignated balances.

Cashflow Management Alternatives

Historically, the state has managed its need for additional cash at certain times of the year by issuing operating notes. Under current law, the state is able to borrow money at tax-exempt interest rates to support the general fund's cashflow, rather than at the rate paid on the taxable securities held in the state investment fund. Under this authority, the state issued operating notes each fiscal year from 1983-84 to 1998-99. Each of these note issues was repaid by the end of the fiscal year of issue and supplied sufficient cash for the state to make payments in a timely manner, without having to make significant temporary reallocations from available balances of the state investment fund after the note issue.

Depending on market interest rates, the interest paid on operating notes may be less than the earnings rate paid in the state investment fund. In this case, the state may reduce its borrowing costs by issuing operating notes. As an example, in fiscal year 1998-99, it was estimated that the state saved approximately \$3.8 million through the issuance of operating notes, compared to utilizing temporary reallocations from the state investment fund.

While issuing operating notes can be less costly than temporary borrowing through the investment fund, this is not always the case. In 2001-02, the interest rate paid to investors for the operating notes exceeded the rate earned in the state investment fund for some months. Therefore, the interest paid on the notes was higher than the interest that would have been paid for temporarily using other state funds in those months. However, in the absence of the operating notes, there would have been a greater risk of negative cash balances exceeding the amounts available under the temporary borrowing authority.

With short-term market interest rates being held at very low levels in recent years, the average annual rate of return for balances held in the state investment fund was 0.15% or lower, and as low as 0.09%, in every year between 2011-12 and 2014-15. Rates began increasing in 2015-16, and in September, 2018, the annualized rate of return was 2.05%. While the net interest costs on operating notes have also been quite low (0.22% for the issue in 2011-12), the state has issued operating notes primarily in order to ensure that the general fund has sufficient cash balances to make payments in a timely manner through each fiscal year, rather than to reduce its borrowing costs.

One alternative to relying on operating notes or temporary borrowing from other state funds would be to increase the statutory balance requirements under current law. Wisconsin statutes provide that no bill may be enacted by the Legislature if it would cause the estimated general fund balance on June 30 of any fiscal year to fall below a specified

amount or a specified percentage of budgeted gross general fund appropriations plus GPR compensation reserves for the fiscal year. The most recent reserve requirements, provided under 2015 Act 55, established a \$65 million reserve for fiscal years 2015-16 and 2016-17, and a reserve equal to the previous year's amount plus an additional \$5 million for 2017-18 and each year thereafter. In 2018-19, the \$75 million reserve requirement represents approximately 0.42% of total GPR appropriations plus compensation reserves budgeted for 2018-19. Based on 2018-19 budgeted expenditures, a reserve of \$358 million would be required to provide a reserve equal to 2.0% of total GPR appropriations plus compensation reserves.

A second alternative to issuing operating notes or using temporary borrowing from other state funds would be to add to the current budget stabilization fund. Under the provisions of 2001 Act 16, the Secretary of DOA is required to transfer into the budget stabilization fund 50% of the amount by which actual tax collections exceed those that had been forecast for the fiscal year (up to a maximum of 5% of estimated GPR expenditures for that fiscal year). In the absence of an excess of actual revenues over those forecast, no amounts are transferred to the budget stabilization fund under this mechanism. Also, proceeds from the sale of surplus property are deposited in the fund.

In 2010-11, actual general fund tax revenues exceeded the amounts projected for 2010-11 in the 2009-11 budget bill. Under the Act 16 provisions, \$14.6 million was transferred from the general fund to the budget stabilization fund in the fall of 2011. Similarly, for fiscal year 2011-12, an additional \$108.7 million was transferred in the fall of 2012, and for 2012-13, \$153.2 million was transferred in the fall of 2013. As a result of these additional transfers, the June 30, 2014, balance in the budget stabilization fund was \$279.7 million. No transfers to the budget stabilization fund were made in the 2013-15 or 2015-17 biennia. In 2017-18, actual general fund tax revenues exceeded the

amounts projected for 2017-18 in 2017 Act 59 (the 2017-19 biennial budget act). As a result, \$33.1 million was transferred from the general fund to the budget stabilization fund in the fall of 2018.

In order to guarantee future increases in the budget stabilization fund, the Legislature could require that sums be transferred to the fund whether or not actual revenues exceed tax collections that had been projected for the fiscal year.

An additional alternative to issuing operating notes or using temporary borrowing from other state funds would be to shift a portion of the shared revenue and school levy credit payments to later in the fiscal year. The lowest cash balance after deducting the operating notes occurred in the first half of the state's fiscal year. Under current law, all of the county and municipal aid under the various shared revenue appropriations and the school levy and first dollar credit are paid in the first half of the fiscal year (approximately \$1.9 billion in 2017-18). If \$300 to \$400 million of these payments were shifted to May or June in the state's same fiscal year, the state's cashflow in the fiscal year would be improved.

A major disadvantage of this alternative is the effect this type of shift would have on municipal budgets. Since municipalities budget on a calendar year basis, the shift of \$300 to \$400 million in shared revenue or school levy credit payments to the following May or June would result in a significant one-time loss of revenues for municipalities. Alternatively, the state could advance \$300 to \$400 million of payments from July and November to the preceding May or June to establish the proposed payment schedule. However, this approach would represent a one-time cost of the same amount to the state's general fund.

A final alternative would be to channel any future increases in these state aid programs to payment dates in the later part of the state's fiscal year. This would more slowly balance the state's cashflow pattern. This alternative does not relate to the

policy decision of which state aid programs should receive additional funding, but rather to the timing of the payment of any increased funding for each of these state aid programs. If additional payment

amounts for these programs could be scheduled late in the state's fiscal year, the general fund's cashflow situation would be improved.
