

ORDER OF THE STATE OF WISCONSIN
NATURAL RESOURCES BOARD REPEALING, RENUMBERING,
RENUMBERING AND AMENDING, AMENDING AND CREATING RULES

The Wisconsin Natural Resources Board adopts an order to **repeal** NR 438.03(1)(a)1. and 2. and 438.03 Table 1; to **renumber** NR 400.02(162)(a) and (z); to **renumber and amend** NR 400.02(162)(b) to (y) and 438.03(1)(a)(intro.) and 438.03 Table 2 and footnotes 3 to 6; to **amend** NR 424.05(2)(a)(intro.) and (6)(a)3., 438.03(1)(am) and 445.06(2)(a)5.; and to **create** NR 400.02(162)(a)(intro.) and 45. to 48. and (b), 424.05(2)(c) and (6)(b)5. to 7. and 438.03 Table 1 footnote 7 relating to excluding additional organic compounds for the volatile organic compound (VOC) definition and to VOC emission limits for yeast manufacturing.

AM-18-05

Summary Prepared by the Department of Natural Resources

1. Statute interpreted: s. 285.11(6), Stats. The State Implementation Plan developed under s. 285.11(6), Stats., is revised.

2. Statutory authority: ss. 227.11(2)(a), and 285.11(1) and (6), Stats.

3. Explanation of agency authority:

Section 227.11(2)(a), Stats., gives state agencies general rule-making authority. Section 285.11(1) Stats., gives the Department the authority to promulgate rules to implement and consistent with, ch. 285, Stats. Section 285.11(6), Stats., authorizes the Department to develop and revise a state implementation plan for the prevention, abatement and control of air pollution.

4. Related statute or rule:

The proposed rule revision on the definition of VOCs relates to existing rules, which define VOCs in s. NR400.02(162), as well as the emission reporting requirements in ch. NR438 and the VOC emission limits in chs. NR 419 to 424. The proposed yeast manufacturing rule revision relates to the emission limit requirements for yeast manufacturing facilities in s. NR 424.05 and the MACT requirements for those facilities under 42 USC 7412.

5. Plain language analysis:

On Nov. 29, 2004 U.S. EPA adopted revisions to the federal definition of “volatile organic compounds” (“VOCs”) in 40 CFR 51.100(s). The Department proposes to revise the definition of VOCs in s. NR 400.02(162) such that it conforms with the corresponding federal definition. The proposed changes are as follow:

I. Adding the four compounds to the list of compounds excluded from the definition of VOC:

- a. 1,1,1,2,2,3,3-heptafluoro-3-methoxy-propane (n-C₃F₇OCH₃)
(known as HFE-7000)
 - b. 3-ethoxy-1,1,1,2,3,4,4,5,5,6,6,6-dodecafluoro-2-(trifluoromethyl) hexane
(known as HFE-7500, HFE-s702, T-7145, and L-15381)
 - c. 1,1,1,2,3,3,3-heptafluoropropane (known as HFC 227ea)
 - d. methyl formate (HCOOCH₃)
- II. A nomenclature clarification to two previously excluded compounds:
- a. Adding the nomenclature designation “HFE-7100” to 1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxybutane (C₄F₉OCH₃)
 - b. Adding the nomenclature designation “HFE-7200” to 1-ethoxyl-1,1,2,2,3,3,4,4,4-nonafluorobutane (C₄F₉OC₂H₅)

These names are widely accepted alternative designations for the two compounds.

- III. Exclusion of one compound, t-butyl acetate (also known as “tertiary butyl acetate” or informally as “TBAC”), from the definition of VOC for purposes of VOC emission limitation or VOC content requirements, but not for purposes of all recordkeeping, emission reporting, and inventory requirements. When EPA has excluded a compound from the VOC definition in the past, the compound was excluded from all VOC requirements. This is not the case with TBAC. It is excluded from the definition of VOC for purposes of VOC emission limitations and content requirements only. However it remains a VOC for other requirements and needs to be reported separate from other non-exempt VOCs. Consequently t-butyl acetate needs to be incorporated in the list of reportable air contaminants in the emission inventory requirements of s. NR 438.03.

The Department is also proposing changes to VOC control requirements for yeast manufacturing in s. NR 424.05 to be consistent with US EPA control requirements for this industry. The proposed changes to s. NR 424.05 provide that 98% of the fermentation batches over any 12 consecutive month period must meet the existing VOC concentration limits. Associated recordkeeping changes are also proposed to ensure the facility maintains the information necessary to calculate the percent of batches meeting the VOC concentration limits.

6. Summary of, and comparison with, existing or proposed federal regulation:

VOC definition

Volatile organic compounds are those organic compounds which contribute to ozone formation through atmospheric photochemical reactions. It has been EPA’s policy that organic compounds with a negligible level of reactivity need not be regulated to reduce ozone. The EPA lists these compounds in its regulations at 40 CFR 51.100(s) and excludes them from the definition of VOC. The VOC definition in s. NR 400.02(162) has been identical with the EPA definition.

On November 29, 2004, EPA revised the definition of VOC by identifying additional compounds to be excluded (Federal Register 69 FR 69290 and 69 FR 69298). Following these EPA actions the Department is proposing to revise the definition of VOC in s. NR 400.02(162) such that it conforms with the federal

regulation.

Yeast manufacturing

Section 112 of the Clean Air Act (CAA) requires that the EPA promulgate emission standards for all categories of major sources of hazardous air pollutants (HAP). EPA identified the nutritional yeast manufacturing source category as a major source of acetaldehyde emissions, a listed federal HAP. On July 16, 1992, the EPA published an initial list of categories which included yeast manufacturing facilities. The EPA promulgated final national emissions standards for hazardous air pollutants (NESHAP) for manufacturing of nutritional yeast on May 21, 2001. These standards implement section 112(d) of the CAA by requiring all major sources to meet HAP emission standards reflecting the application of the maximum achievable control technology (MACT). MACT established limitations on VOC emissions as a surrogate for acetaldehyde, which makes up only a portion of the total VOC emitted from the yeast fermentation process. The emission limitations include both VOC concentration limits and a percent-of-batches requirement. The VOC concentration limits apply to each yeast batch and are expressed as the VOC concentration in the exhaust from the fermentation vessel averaged over the duration of the batch. The percent-of batches provision requires that at least 98% of the batches on a rolling 12-month average comply with the concentration limits.

As part of its ambient air quality standard attainment strategy for ozone, the Department developed a series of VOC limits for specific source categories that represented reasonably available control technology (RACT). Included in these RACT limits were VOC control requirements for yeast manufacturing, which became effective as a final rule on June 1, 1994 (s. NR 424.05, Wis. Adm. Code). That rule also established VOC concentration limits in the exhaust from the fermentation vessel averaged over the duration of the batch. However, that rule contained no provision parallel to the percent-of-batches requirement contained in the recent EPA MACT rule for yeast manufacturing. Consequently the existing Department RACT rule requires that 100% of all batches meet the concentration limits. The proposed revision will incorporate the 98% compliance requirement into the RACT rule for yeast manufacturing.

7. Comparison with rules in adjacent states:

VOC definition

Wisconsin and all adjacent states have adopted a definition for VOC which is identical, or to a large extent identical, with EPA's definition in the regulation at 40 CFR 51.100(s). None of the adjacent states have incorporated the recent EPA's revisions to the VOC definition into their regulations yet.

Illinois: The definition of VOCs is identical with EPA's previous definition; the recent EPA revisions have not been incorporated yet (Reference: Title 35 of the Illinois Administrative Code, Section 211.7150).

Iowa: The definition of VOCs is identical with EPA's previous definition; the state regulation refers to EPA's definition of April 9, 1998. The recent EPA revisions have not been incorporated yet (reference: IOWA Administrative Code – ENVIRONMENTAL PROTECTION COMMISSION, 567—

20.2(455B)).

Michigan: The definition of VOCs is to a large extent similar to EPA's previous definition. The recent EPA revisions have not been incorporated yet (reference: Department of Environmental Quality, Air pollution Control, Part 1, R 336.1122(f)).

Minnesota: The definition of VOCs is identical with current EPA's definition. The recent EPA revisions are indirectly incorporated in the state rule due to the rule language in CHAPTER 7005, subp. 45 UU. It says, as the last item in the list of compounds excluded from the definition of VOC, "... any other compound determined by the United States Environmental Protection Agency to be negligibly photochemically reactive, upon publication of the determination in the Federal Register".

Yeast manufacturing

The Department is not aware of any yeast manufacturing facilities located in Illinois, Michigan or Minnesota. A yeast manufacturing facility is located in Cedar Rapids, Iowa. Cedar Rapids is currently designated as an ozone attainment area, and the facility there is a major source subject to prevention of significant deterioration (PSD) permit requirements including best available control technology (BACT). EPA has fully delegated the PSD program in Iowa to the Iowa Department of Natural Resources (IDNR). The IDNR has issued a PSD permit to the facility in Cedar Rapids using the same approach used by EPA in the EPA MACT. The permit establishes VOC concentration limits averaged over the fermentation batch cycle and requires that at least 98% of the batches in each rolling 12 month period meet the concentration limits.

While not an adjacent state, the state of Maryland developed VOC control rules for yeast manufacturing as part of its ozone attainment strategy. (Code of Maryland Regulations, Title 26 Subtitle 11 Chapter 19.) Maryland's rule establishes VOC concentration limits consistent with those in s. NR 424.05, Wis. Adm. Code, but like the EPA MACT and IDNR PSD permit, only requires that these limits be met for 98% of all fermentation batches in each 12-month period.

8. Summary of factual data and analytical methodologies:

Since the proposed rule revisions are based on changes to federal air regulation, the Department is relying on the factual data and analytical methodologies used by U.S. EPA to support the federal rule-making. The corresponding federal regulations are published in Federal Register: 66 FR 27876 (Manufacturing of Nutritional Yeast), 69 FR 69290 (VOC definition, exclusion of four compounds), and 69 FR 69298 (VOC definition, exclusion of t-butyl acetate).

9. Analysis and supporting documents used to determine effect on small business or in preparation of economic impact report: none

10. Effect on small business:

There is no known effect on small business due to the revision of the VOC definition.

The only yeast manufacturer in Wisconsin affected by the proposed changes to s. NR 424.05, Wis. Adm. Code, is not considered to be a small business.

11. Agency contact person:

Farrokh Ghoreishi, 608-264-8868, farrokh.ghoreishi @dnr.state.wi.us

SECTION 1. NR 400.02(162)(a) is renumbered NR 400.02(162)(a)1.

SECTION 2. NR 400.02(162)(a)(intro.) is created to read:

NR 400.02(162)(a)(intro.) Organic compounds excluded for all purposes:

SECTION 3. NR 400.02(162)(b) to (y) are renumbered NR 400.02(162)(a)2. to 44. and as renumbered NR 400.02(162)(a)40. and 42. are amended to read:

NR 400.02(162)(a)40. 1,1,1,2,2,3,3,4,4-Nonafluoro-4-methoxybutane ($C_4F_9OCH_3$ or HFE-7100).

42. 1-Ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane ($C_4F_9OC_2H_5$ or HFE-7200).

SECTION 4. NR 400.02(162)(a)45. to 48. are created to read

NR 400.02(162)(a)45. 1,1,1,2,2,3,3-Heptafluoro-3-methoxy-propane ($n-C_3F_7OCH_3$ or HFE-7000).

46. 3-Ethoxy-1,1,1,2,3,4,4,5,5,6,6,6-dodecafluoro-2-(trifluoromethyl) hexane (HFE-7500).

47. 1,1,1,2,3,3-Heptafluoropropane (HFC 227ea).

48. Methyl formate ($HCOOCH_3$).

SECTION 5. NR 400.02(162)(z) is renumbered to NR 400.02(162)(a)49.

SECTION 6. NR 400.02(162)(b) is created to read:

NR 400.02(162)(b) The following compound is subject to all recordkeeping, emissions reporting, photochemical dispersion modeling, inventory requirements and emissions fees which apply to VOCs and shall be uniquely identified in emission reports, but is not considered a VOC for purposes of VOC emissions limitations or VOC content requirements: t-butyl acetate.

SECTION 7. NR 424.05(2)(a)(intro.) is amended to read:

NR 424.05(2)(a)(intro.) Except as provided in ~~par. pars.~~ (b) and (c), no owner or operator of a yeast manufacturing facility may cause, allow or permit the average concentration of VOCs in the exhaust gas stream from a fermenter ~~during over the duration of~~ a fermentation batch to exceed the levels in subds. 1. to 3. These levels are on a saturated water basis and are based on total VOCs expressed as propane.

SECTION 8. NR 424.05(2)(c) is created to read:

NR 424.05(2)(c) Compliance with the emission limitations in par. (a) shall be achieved for at least 98% of all fermentation batches subject to the emission limitations in par. (a) over any 12 consecutive month period.

SECTION 9. NR 424.05(6)(a)3. is amended to read:

NR 424.05(6)(a)3. The fermentation cycle for which a fermenter is being used, recorded as either trade, first generation or stock.

SECTION 10. NR 424.05(6)(b)5. to 7. are created to read:

NR 424.05(6)(b)5. For each fermentation batch subject to an emission limitation in sub. (2)(a), the average concentration of VOC in the exhaust gas stream over the duration of the fermentation batch.

6. The number of fermentation batches subject to an emission limitation in sub. (2)(a) completed during each month.

7. The percent of all completed fermentation batches in compliance with the applicable emission limitation in sub. (2)(a) over the previous 12 consecutive month period.

SECTION 11. NR 438.03(1)(a)(intro.) is renumbered to NR 438.03(1)(a) and amended to read:

NR 438.03(1)(a) Except as provided in par. (am), any person owning or operating a facility that emits an air contaminant in quantities above applicable reporting levels, except indirect sources of air pollution, shall annually submit to the department an emission inventory report of annual, actual emissions or, for particulate matter, PM₁₀, sulfur dioxide, nitrogen oxides, carbon monoxide and volatile organic compounds, throughput information sufficient for the department to calculate its annual, actual emissions. The reportable air contaminants and applicable reporting levels are listed in ~~the following tables: Table 1.~~

SECTION 12. NR 438.03(1)(a)1. and 2. are repealed.

SECTION 13. NR 438.03(1)(am) is amended to read:

NR 438.03(1)(am)1. ~~Beginning with emissions reported for calendar year 2004, the~~ The owner or operator of a facility described by a standard industrial classification code listed in Table D of s. NR 445.11, or that has annual actual emissions of less than 5 tons of particulate matter and less than 3 tons

of volatile organic compounds, may limit the information on hazardous air contaminants included in the annual emission inventory report to those contaminants identified under s. NR 445.11(1)(a) or (b).

2. Notwithstanding subd. 1., the owner or operator shall continue to report annual emissions of any air contaminant reported in prior calendar years for the facility, provided annual, actual emissions are greater than the reporting level in Table 2 1.

SECTION 14. NR 438.03 Table 1 is repealed.

SECTION 15. NR 438.03 Table 2 is renumbered NR 438.03 Table 1, and as renumbered, Table 1 and footnotes 3, 4, 5 and 6 are amended to read:

NR 438.03 Table 1

**Table 1

³Indicates contaminants for which a fee will be assessed under s. NR 410.04. Emissions of all compounds listed in s. NR 400.02(162)(b) shall be included when determining fees for volatile organic compounds.

⁴Indicates compounds included in the glycol ethers group. These In addition to being reported individually when a compound's emissions are above the reporting level, the emissions of these compounds are included in the glycol ethers emission total reported along with emissions of the many other such compounds not listed individually by name.

⁵Glycol ethers include mono- and di-ethers of ethylene glycol, diethylene glycol, and triethylene glycol, R-(OCH₂CH₂)_n-OR'

where:

n = 1, 2 or 3

R = alkyl C7 or less or

R = phenyl or alkyl substituted phenyl

R' = H or alkyl C7 or less or OR' consists of carboxylic acid ester, sulfate, phosphate, nitrate or sulfonate.

⁶Organic Compounds that are not volatile organic compounds because of negligible photochemical reactivity VOC and should not be considered or included here are specified in s. NR 400.02 (162)(a). Emissions of organic compounds specified in s. NR 400.02(162)(b) shall be considered to determine if the reporting level for VOC is exceeded. Emissions of these compounds, however, shall be reported separately as the individual compound if the reporting level for VOC is exceeded.

SECTION 16. NR 438.03 Table 1 footnote 7 is created to read:

NR 438.03 Table 1 footnote 7⁷ Any amount of emissions of this compound shall be reported if the reporting level for VOC emissions is exceeded. See footnote 6 for how to determine if the reporting level for VOC emissions is exceeded.

SECTION 17. NR 445.06(2)(a)5. is amended to read:

NR 445.06(2)(a)5. Table 2 1 of s. NR 438.03.

SECTION 18. EFFECTIVE DATE. This rule shall take effect on the first day of the month following publication in the Wisconsin administrative register as provided in s. 227.22 (2) (intro.), Stats.

SECTION 19. BOARD ADOPTION. This rule was approved and adopted by the State of Wisconsin Natural Resources Board on August 17, 2005.

Dated at Madison, Wisconsin _____.

STATE OF WISCONSIN
DEPARTMENT OF NATURAL RESOURCES
